Project Saturn

GM unveils billion-dollar subcompact

In an unusual move, GM last week unveiled what it has called its 'No-Year' subcompact, codenamed Project Saturn, that will be built in the U. S. in the late 1980s. Slightly smaller than a Cavalier, it will incorporate new manufacturing and product concepts including modular construction and space-saving seating. The $1-billion-plus car will appear first as a Chevrolet.

New-car dealer count up by 94 for third quarter

By John K. Teahen Jr.
Managing Editor

For a while at least, the frightful attrition in the ranks of domestic auto dealers has ended.

In the third quarter of this year, the manufacturers showed a net gain of 94 outlets to bring the total to 20,817 on Oct. 1, the quarterly AUTOMOTIVE NEWS census disclosed.

It was by far the biggest gain in the 22 years that AUTOMOTIVE NEWS has been tabulating dealer totals on a quarterly basis, and it was only the sixth time in those 22 years that there has been any upturn at all for a three-month period.

The gain is even more impressive when compared with last year's loss of 303 outlets in the July-September span.

Although quarter-by-quarter figures are not available for years prior to 1962, it is a certainty that 94-outlet advance has not been topped since 1955. That was the last full year that the domestic industry showed a gain — 644 for the 12 months.

Chrysler Corp. led the way in the third quarter with an increase of 73 dealerships. Ford Motor Co. added 30 to its total, and American Motors-Renault was up 13.

There were dips of 25 for General Motors and five for Volkswagen. A change in the number of intercorporate duals brought the gain to 94 for the domestic industry.

All figures in this article and the accompanying tables refer to the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

• The third-quarter bonanza put the industry on the plus side for the first nine months of this year. The Oct. 1 count of 20,817 is up 18 from the 20,799 dealerships in operation on Jan. 1. Once again, it was a gold-star event that hasn't happened since 1955. Last year, the first nine months showed a plunge of 859 locations.

Chrysler Corp. was the big winner with the addition of 161 car outlets, and Ford Motor picked up 40. There were dips of 100 for GM, 35 for AMC-Renault and 24 for VW. Factoring in the change in intercorporate duals gave the industry a gain of 18.

The figures for the 1983 model year were not quite as good as those for the periods mentioned above, but they were eminently acceptable in view of what's been happening in recent seasons.

The latest total of 20,817 domestic dealerships is down 80 from the 20,897 doing business on Oct. 1, 1982.

Another loss, to be sure, but the dip was minimal when compared with declines of 1,643 dealerships in the 1980 model year, 758 in 1981 and 1,267 in 1982.

Chrysler Corp. almost turned things around all by itself with a gain of 169 outlets for the '83 model year. Ford Motor wound up exactly even for the period, and there were drops of 170 for GM, 39 for VW and 26 for AMC-Renault. A change in intercorporate duals made the downturn 80 for the industry.

While the foregoing figures

An unprecedented peek at corporation's high-tech Japan-beater

GM unveils down-the-road 'no-year' small car

By Kathleen Hamilton
Financial Editor

General Motors' much-ballyhooed 'No-Year' car—the high-technology, U. S.-made subcompact that is supposed to beat the Japanese in costs—was unveiled in clay form last week at the GM Technical Center in Warren, Mich.

It was perhaps a unique announcement for GM: Top executives posed with models of a car that is at least three years away from production.

They outlined production, management, engineering and product advances developed for the $1-billion-plus project—advances that are expected to be adopted for other GM cars and result in a major overhaul of GM operations.

GM executives said Project Saturn also will reshape assembly workers' roles and tasks. An "historic" announcement by GM and the UAW is due within weeks, outlining how they will work together, GM President F. James McDonald said.

Chevrolet will get the car first. Initially, it will be a four-door sedan. A coupe and a sports utility vehicle will follow, McDonald said.

Ten inches shorter than J-cars Cavalier, Skyhawk, 2000, Sunbird, Firenza and Cimarron, it will have about the same interior space that they have and weigh 400 pounds less.

The Project Saturn car also will be much cheaper to produce, according to GM Chairman Roger B. Smith. It will cost less than even the GM-Toyota joint venture car, Smith said. It will be marketed downscale from both that car and the Cavalier.

Body panels probably will be both steel and plastic, GM Vice Chairman Howard Kehrl said.

The engine will be a fuel-injected four-cylinder water-cooled gasoline powerplant, with both aluminum heads and block cast using the precise lost-foam technique used by Oldsmobile for its diesel V-6.

The method is expected to reduce machining 40 percent.

Although the GM executives declined to get very specific on the engine program, citing competitive reasons, McDonald said the latest in combustion-chamber advances will help make the engine the most advanced on the market at launch time. Fuel economy is expected to be in the range of 45 MPG city, 60 highway.

Saturn's rear axle will require one-eighth the amount of MIG welding as a conventional rear axle for a front-drive car, saving considerable money, Smith said.

Kehrl outlined plans for two transaxles: A five-speed manual and an electronically controlled four-speed automatic with overdrive that will be "significantly less costly than today's designs."

Both may be built in a single plant for flexibility in case of market shifts, McDonald said.

GM will make use of a second-generation space frame similar to the one first used in the

Local-content measure is passed by House

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—The UAW-backed local-content bill was passed by the House of Representatives last week in much stronger form than last year's measure. The vote was 219 in favor of the measure, 199 against.

The bill appears to have little chance of passage in the Senate.

A crucial moment in the bill's consideration came when Rep. Dan Coats, Indiana Republican, offered an amendment on behalf of the import auto dealers.

The amendment would have substantially weakened the bill by tying its enforcement to the General Agreement on Tariffs and Trade and dismantling the measure if it led to retaliation by foreign nations against U. S. exports.

A similar amendment was added to last year's bill by a single vote. It was widly interpreted as rendering the bill ineffective.

Once the Coats amendment was defeated, the bill sped to rapid approval by the House. The legislators paused only long

Makers cling to security blankets with November incentive programs

By Joseph Bohn
Marketing Editor

Auto companies are doing well, but still prefer to hold onto some sales security blankets during November.

GM extended its 12.9 percent financing program through the end of this month. Ford, Chrysler and American Motors followed with similar extensions.

Ford and Chrysler also extended a slew of special incentive programs.

American Motors has a new incentive coming up in December.

General Motors Acceptance Corp. extended its 12.9 percent financing on new '83 and '84 cars and trucks through Nov. 30. The unadvertised rate is available for dealers to use at their discretion.

Ford Motor Credit countered by extending its 12.9 percent offer for a month in five Western States. They are California, Oregon, Washington, Alaska and Hawaii.

At Ford Division, the rate has been extended to cover all new models except Crown Victoria and Mustang, and all new trucks, except Econoline vans and Club Wagons.

Ford Division also extended a salesmen's cash program for 10 days only — to Nov. 10. Under the program, salesmen can earn $75 for each '83 or '84 Escort, Thunderbird or Ranger, '84 Tempo or '83/'84 2WD/4WD F-150 equipped with a manual transmission.

The $75 salesmen's offer on F-150 trucks with manual transmission was extended for the whole month.

An override payment to sales managers, based on what salesmen earn, was dropped, however, effective Nov. 1.

A program paying dealers $500 on '83 Mustangs and $700 on '83 Mustang convertibles (the amounts are $700 and $900, respectively, in five Western states), has also been extended for the whole of November.

Lincoln-Mercury similarly extended a salesmen's cash incentive on '83/'84 Topaz, Cougar and Lynx through Nov. 10. It pays $75 on each model.

Again, dealer cash payments of $500 on '83 Capri ($700 in five Western states; there is no Capri convertible) has been extended for the whole of November.

And 12.9 percent financing, offered through Ford Motor Credit, was extended for five Western states only on all models except the Grand Marquis and the luxury lines. The '84 Capri is included in this extention, which runs through all of November.

Chrysler Credit is also offering 12.9 percent on all new '83 and '84 vehicles through Nov. 30, regardless of contract length. (This is the same as before.)

Chrysler also extended its '83 model closeout program, offering a variety of dealer cash incentives on '83 cars and trucks, to Dec. 31.

For each retail sale or lease of eligible vehicles, dealers get the following amounts: $200 on Omni, Horizon, Turismo, Charger, LeBaron and Dodge 400. The Shelby Charger is worth $400.

Reliant and Aries pay $100. Chrysler E-Class, Dodge 600, New Yorker front drive, Cordoba and Mirada pay $500; Imperial, $700; Scamp and Rampage, $300; Voyager, $400 and Ram 2WD and 4WD, $400.

AMC, like GM and Ford, is offering 12.9 percent on contracts up to 48 months during November through American Motors Credit only. All new '83 and '84 AMC Jeep and Renault vehicles are included.

American Motors has a Dec. 1-31 dealer incentive on Renault Fuego, based on units retailed and delivered. It pays $300 on regular Fuego models and $1,000 on Fuego Turbo models.

Rear-engined sportster

Aragona Motor Vehicles, Mendon, Mass., displayed the Brasilia at the South Florida Auto Show, which opened at the Miami Beach Convention Center. The American-designed, Brazilian-made coupe has an air-cooled rear engine and features leather interior, tinted glass and four-wheel disk brakes. The price is $13,828.

Lean steps down at 56 from high Toyota post

By Matt DeLorenzo
Los Angeles Reporter

TORRANCE, Calif. — Norman D. Lean, who has played a vital role in Toyota's success in this country, retired Nov. 1 as senior vice president and chief operating officer of Toyota Motor Sales, U.S.A.

Lean's retirement came just over a month after the departure of TMS/USA President Isao Makino, who was replaced by Yukiyaso Togo.

Norman D. Lean

"Everybody's got to retire sometime and my view is sooner is better than later," Lean told Automotive News. "I knew I'd be retiring sooner or later, the timing just seemed to be appropriate with this change (of presidents)."

The early retirement came as a surprise since Lean is 56 years old. However, sources inside the company said there were differences between Lean and the new president.

Togo, unlike his predecessor who preferred to work in the background, is likely to take an active and visible role in running the U. S. operation, as he did in his previous position as head of Toyota's Canadian subsidiary.

Togo reportedly has a good command of English and feels comfortable in direct control of the company, as well as acting as chief spokesman.

As a result, no replacement for Lean has been named, nor does it seem likely that one will be named soon.

"It's my understanding in talking with Mr. Togo that he intends to handle all of those operational jobs that I had directly," Lean said.

"I think his intent, at least for the short term, is that that will give him a very good orientation into what's going on. He'll get to know all the senior management very directly and become familiar with all the aspects of the operations."

Other management changes may come around the first of the year, when the company traditionally announces reorganizations and title changes.

The last such announcement was made Jan. 1, 1982, when Lean was named senior vice president and chief operating officer, a promotion from his previous post of vice president-operations.

• Lean joined Toyota in 1969 as national service manager, coming from Ford Motor Co. He became national sales manager in 1972 and was promoted to vice president, general operations, the following year.

Toyota was on a roll in the late '60s and beyond. It sold only 2,986 cars in the U. S. in 1965, rose to 17,423 the following year and was up to 127,018 in 1969 when Lean came aboard.

In 1972, his first as sales chief, sales were 295,915. Toyota's all-time high was 582,204 in 1980. The numbers have tailed off a bit since then because of Japan's export restrictions.

Truck sales have been rising in recent years. They set a record of 144,308 in 1982 and almost matched that total in the

1.85-million Japan cap rapped by both sides

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—Japan's decision to limit its U. S. auto exports for a fourth year at the increased 1.85-million-car level drew immediate criticism from all quarters of the U. S. auto industry last week.

The negative reaction occurred despite a final figure that is substantially below Japan's earlier expressed desire for a 2-million-car quota.

The original three-year arrangement called for an annual ceiling of 1.68 million cars. It expires March 31, 1984.

Upon reaching agreement on the new voluntary restraint number, Susoke Uno, Japanese Minister of International Trade and Industry, and U. S. Trade Representative Bill Brock, described the understanding as a "transitional" measure to ensure full recovery in the American auto industry.

But U. S. and Japanese auto makers appeared worried over how the new agreement, with its 170,000 additional Japanese imports, would be allocated. In the past, the allocation system worked out between MITI and the Japanese car industry was based on historical market shares with little room for flexibility.

Now, with General Motors asking for 290,000 small Japanese imports from Suzuki and Isuzu and with Mitsubishi and Toyo Kogyo pushing for greater U. S. market shares, MITI may have to restructure its quota portions.

GM appeared to be hoping for just such a reapportionment, saying the company's arrangement with Isuzu and Suzuki "should not be penalized by staying with export allocation formulas that are now outdated."

Chrysler Chairman Lee Iacocca responded by again threatening to scrap production plans for the P-car replacement for Omni/Horizon, if GM brings over all of its Japanese imports.

Robert McElwaine, president of the American International Automobile Dealers Assn., said that if GM dealers get the additional Japanese cars, his group would "pursue every avenue open to us under the Sherman Antitrust Act to overturn such a discriminatory apportionment."

Ford Motor Co. Chairman Philip Caldwell said his company is "disappointed to see any increase in Japanese auto exports at a time of continuing high U. S. unemployment and record high U. S. trade deficits with Japan."

Takashi Ishihara, president of the Japan Automobile Manufacturers Assn., said the three-year agreement had already achieved its purpose and that the new agreement should be for one year only. He described the new restraint as "unsatisfactory, but inevitable." Ishihara is also president of Nissan Motor Co.

• But the individual Japanese car companies were divided in their reactions, according to Kyodo News Service of Japan. Toyoo Tate, president of Mitsubishi Motors Corp., said his company is dissatisfied with the new quota, which he said was smaller than expected.

Toshio Okamoto, president of Isuzu Motors, Ltd., also expressed strong dissatisfaction, saying the new restraint would adversely affect Isuzu's plans to supply 100,000 small cars annually to GM.

However, officials of the larger Japanese car companies, which enjoy relatively large shares of the present quota,

Domestics gain 36 percent; imports up 16 percent

New-car sales surge in October

By Jenny L. King
Staff Writer

New-car sales during the first month of the 1984 model year surged ahead with substantial gains for both domestic and imports.

The U. S. auto makers had their greatest year-to-year gain for a month since June. Imports, though up 16.48 percent, lost several percentage points in shares of the market, dropping to 22.80 percent from 25.66 percent.

Domestic new-car sales in October climbed 36.14 percent, to 664,194 from 487,871. It was their best monthly gain since the 48.01-percent explosion last June, and brought to eight the number of consecutive months in which sales have been up compared with 1982 levels. The chain of 10-day periods with increases was extended to 16.

Imports were up 16.48 percent, to 196,124 from 168,379. The combined total for October of 860,318 was up 31.10 percent from 656,250.

Year-to-date sales for the domestics pulled 18.84 percent ahead of 1982, moving to 5,645,252 from 4,750,466. Import sales for the 10 months were up 8.06 percent, to 2,000,626 from 1,851,404. Industry total this year was 7,645,878, up 15.81 percent from 6,601,870.

Where auto market was in October

	Total Sales	Pct. of Total
SUBCOMPACT	109,071	12.68
COMPACT	143,867	16.72
INTERMEDIATE	252,147	29.31
STANDARD	106,866	12.42
LUXURY	52,243	6.07
IMPORT	196,124	22.80
TOTAL	860,318	100.00

• Ford Motor Co. led the U. S. auto makers in October with a dazzling 41.94-percent sales increase. Ford reported sales of 150,340 this year compared with 105,918 in 1982. General Motors was next-best with a 38.43-percent jump, to 410,177 from 296,317.

Chrysler Corp. sales were up 14.79 percent, to 75,938 from 66,156. American Motors turned in a total of 15,344, up 20.61 percent from its year-ago 12,722. Volkswagen was up 6.19 percent, to 7,176 from 6,758, and

Four-wheel steering, ceramic gas turbine and plenty of other goodies

Japanese idea cars display high-tech at Tokyo show

By John Hartley
Staff Correspondent

TOKYO.—Idea cars, intended to burnish a high-tech image for Japan, were the sensations of the Tokyo Motor Show, with several from Toyota and one each from Nissan and Mazda.

In addition, Nissan's new Bluebird, Toyota's front-drive four-door Corona and Mitsubishi's rebodied Mirage (Colt in the U.S.) made their debuts, while a number of prototypes of cars due to go into production soon—such as the Subaru one-liter front-drive hatchback—were on display.

Although Toyota showed the most idea cars, it was Toyo Kogyo's Mazda MX-02 that produced the most innovative design, featuring steering at both front and rear wheels. And the MX-02, unlike some concept cars, is a practical vehicle with room for five people.

With an overall length of 177 inches and a width of 66.7 inches, it is about the same size as a typical European or Japanese two-liter car. However, the wheelbase is 110 inches, about the same as a typical three-liter car.

The long wheelbase provides plenty of legroom, while with the four-wheel steering the car is easy to park and responds like a small car at higher speeds. The front and rear wheels steer parallel to each other at low speeds and on the opposite locks at high speeds.

• Toyota's FX-1 has a twin-turbo engine and variable valve timing in a sleek coupe body, which like Mazda's MX-02 and Nissan's NX-21 has flush glass.

The FX-1 also features a hydropneumatic suspension with electronic control of damping and spring rate. A number of parts are made of ceramic materials.

Ceramic parts were also to be found in several internal components on an Isuzu 1.8-liter diesel and in a Mitsubishi prototype turbocharger.

Inside the Nissan NX-21 concept car was a ceramic gas turbine engine, with output of 100 HP. The combustor, turbine wheels and housing are all made of ceramic materials. The NX-21 is a low-slung coupe with sharply sloping hood and flush-fitting headlamps.

Toyota also showed an off-road runabout with one front and two rear seats. Also at the Toyota display was the SV-3 mid-engine coupe, due to be launched next year.

Also showing upcoming models were Subaru, which displayed a pre-production version of the one-liter hatchback it will introduce next year, and Daihatsu, which showed its Rugger off-road vehicle, also due to be launched next year.

Mitsubishi introduced its rebodied Colt hatchback and sedan, while Nissan unveiled its Bluebird (Maxima in the U.S.) front-drive model. The Colt is completely new in appearance, while the Maxima is similar in appearance to the old model.

Also on the Mitsubishi stand was the Starion four-wheel-drive rally car, to be marketed next year. The car is powered by a new version of the Sirius two-liter engine with three valves per cylinder and rated at 350 HP.

Iacocca welcomes a new star

Lee A. Iacocca, Chrysler Corp. chairman, introduced the company's new mini-vans at ceremonies last week at the Windsor (Ont.) assembly plant. He's shown with the Plymouth Voyager wagon. Other models are the Dodge Caravan wagon and Dodge Mini Ram, a commercial van.

Iacocca says mini-van 'will make history'

By Jack Walsh
Truck Editor

WINDSOR, Ont. — Chrysler Corp.'s all-new mini-vans — family wagons and a panel van — "will make automotive history," Lee A. Iacocca, chairman, proclaimed last week at production-launch ceremonies in the state-of-the-art Windsor assembly plant.

He predicted the wagons — Plymouth Voyager and Dodge Caravan — will be to the '80s what the Ford Mustang was to the '60s, "vehicles that create extraordinary excitement and buyer interest and force other manufacturers to come up with copycat versions."

Iacocca noted that the Mustang, whose development he led as Ford Division general manager, "became both a sales legend and a classic car in its own time," and he added:

"I feel that our mini-vans will do all of that, too. The design, frankly, is more revolutionary than the Mustang was."

Development of the front-wheel-drive minis cost Chrysler $660 million, compared with $100 million for the Mustang, Iacocca said.

The mini-van, which will be

Wants GM to inform owners of alleged brake defect

U.S. asks for X-body escrow fund

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The U.S. Government has asked a federal court to require General Motors to inform owners of 1980 X-body cars of the nature of the alleged brake defect and to offer to reimburse them for repairs if it loses the current court case.

Also included in the motion for preliminary injunction is a request that Judge Thomas Penfield Jackson require GM to establish an escrow fund of at least $50 million to reimburse X-car owners for repairs made to fix the allegedly defective brakes during pendency of the suit.

In Judge Jackson's written order of Oct. 19 — when he allowed release of GM documents which NHTSA had subpenaed from the company and which the government maintains is the basis of its defect case — GM was given until Nov. 20 to file its opposition to the government's move for summary judgment, made on Sept. 13.

Oral argument was set for Jan. 11. Involved are some 1.1 million 1980 X-body cars.

Because of delay in GM response and because winter is approaching and corrosion in the front brakes (which may be aggravated by salt on the roadways) is one of the causes of rear brake lockup, the government feels notifying owners is important.

It is asking the court to make GM notify owners of the government allegations, describe the alleged causes so consumers can take remedial action, set up an escrow fund of at least $50 million that might be used and tell owners that GM will pay if

Crain Communications buys city magazine

DETROIT. — Crain Communications, publisher of AUTOMOTIVE NEWS and 18 other special-interest publications, last week acquired Monthly Detroit, a metropolitan magazine with a circulation of about 40,000.

The magazine was purchased for an undisclosed sum from the Cleveland-based City Magazines, Inc. Keith E. Crain, AUTOMOTIVE NEWS publisher and editorial director, will be Monthly Detroit editor-in-chief.

Prinz dies at 54; Daimler-Benz chief

STUTTGART, West Germany. — Dr. Gerhard Prinz, chairman of Daimler-Benz AG, died of a heart attack at his home here Oct. 29. He was 54.

He had been chairman of Daimler-Benz since January, 1980, and had been with the company since 1974 when he joined the board of management and became responsible for the firm's worldwide purchasing activities.

Dr. Prinz was with Volkswagen from 1967 to 1973 and was a member of the VW board responsible for all German and foreign subsidiaries and affiliates. In 1972-'73, he was chairman of the board of Audi NSU Auto-Union AG.

Dr. Prinz was born in Solingen, Germany. He studied law and had a short career as an attorney before being attracted to industry, where he became a management trainee in the German steel industry for the European Coal and Steel Community in 1958.

In 1960, he became the assistant to the board chairman of Kloeckner-Werke in Duisburg. Three years later he joined the German branch of Brown, Boveri & Cie in Mannheim. He was there until 1967, when he went to Volkswagen.

Dr. Prinz served on the supervisory boards of several German companies and was a member of the Foreign Trade and Payments Council advising the German Federal Minister of Economic Affairs.

Peterson says he was threatened with non-renewal; too many orders?

$49-over dealer attacks Fiero allocations

By Richard A. Wright
Assistant Managing Editor

John Peterson, owner of Peterson Motors, a full-line General Motors dealer in Lake City, Minn., and possessor of the highest profile among the 17 so-called "$49-over" dealers in the U.S., is continuing his assault on GM's new-car distribution system and said he has received a non-renewal threat for his troubles.

Peterson said he has received a letter from a GM lawyer accusing him of "engaging in abuse and harassment" of GM employes and informing him that that is grounds for non-renewal of the franchise agreement, or even termination.

While the letter was simply stating corporate policy, Peterson said he regards it as a warning. Peterson's Chevrolet, Pontiac, Buick, Oldsmobile and Cadillac franchise agreements run out in October, 1985.

Factories are not always eager to fill the orders of $49-over dealers, although policy is spotty in this regard, indicating that there probably is no policy at the divisional level.

The 17 dealers in the U.S. currently using the $49-over system of selling new cars—including Peterson—are disciples of Howard Van Bortel, who devised the system while a GM dealer in Palmyra, N.Y., which eventually led to his termination and, he says, a nice settlement from GM.

The system is basically this: The dealer sells all cars at factory invoice price plus $49. Customers see the invoice prices and pick their options. It's all added up and $49 is tacked on.

The dealer makes his profit through two factory policies, the 3 percent holdback, which is included in the invoice price, and the 20-day floorplan subsidy credit, which goes at least partially to the dealer because $49-over dealers carry no inventory of cars. All orders are sold orders.

Van Bortel, who exuberantly admits to being a thorn in GM's side, said he has had numerous inquiries from dealers interested in the program since AUTOMOTIVE NEWS began chronicling Peterson's arguments with Detroit. He said 50 dealers want to meet with him and another 70 have expressed interest.

Actually, Peterson's arguments have been mainly with Oldsmobile and Cadillac, which have consistently refused to build most of his orders. Buick, on the other hand, has built all his orders and, for the most part, so have Chevrolet and Pontiac, with a few exceptions.

One of those exceptions is the Fiero. Peterson said he has sold and ordered 70 Fieros. When he queried Pontiac as to when he could expect them, he was told that under the current distribution setup he could have only

Peugeot prepares for the future

Investment in product programs starts paying off

By Richard Feast
European Editor

Peugeot S.A.'s programs during the next five years will result in four new chassis families, three new engines and three manual transmissions.

It is a staggering undertaking, even for a group which a few years ago had 15 platforms, 15 gasoline engines and 11 transmissions.

Outlines of the program were given by the French group's president Jean-Paul Parayre in one of his rare interviews. (It will be published in full in the *Forecast '84* Extra section of AUTOMOTIVE NEWS on Dec. 12.)

The integration program is already well advanced and beginning to pay dividends. Two each of the chassis, transmissions and engines already have appeared, and the PSA group has regained some lost market share in its important French home market.

"We have made a lot of progress," says Parayre, who notes the group's comeback will be taken into countries of its European competitors next year.

In 1984 PSA is aiming for 12.5 percent of the total European market with its Peugeot, Citroen and Talbot brand names, compared with 11.8 percent so far this year.

"We expect an increase in our penetration all over Europe, for two main reasons," says Parayre. "First, the launching of the new range of products this autumn. Second, the merger of the Peugeot and Talbot dealer networks—which was achieved in France at the end of 1982—will be completely achieved in Europe this autumn."

The products to which Parayre refers are the Peugeot 250 lower-medium hatchback and Citroen BX medium hatchback — two of the four chassis which will play a crucial role in PSA's strategy.

The strategy includes finding a solution to two possibly conflicting requirements: While standardizing components, PSA believes it is vital to retain the individual identities of each product line, particularly Peugoet and Citroen.

Says Parayre: "These products are completely different, the customers are different. We need to maintain the image and personality of the products to keep the customers with us.

"A main point for me, a few years ago, was whether or not it was possible to achieve these two goals — to standardize the components and to maintain the images," he adds. Now, with the 205 and BX, I think we have proved that it is possible."

Each line has some engines and transmissions in common. The Citroen's Hydropneumatic rear suspension design is the same as that on the Peugeot 305 station wagon. The only difference is Citroen's springs are hydraulic, while Peugeot's are conventional.

This points to the way PSA models will develop.

Will there be a Peugeot version on the BX chassis and a Citroen model on a 205 chassis, with different bodies and interiors?

While revealing much more than was generally known about PSA model policy, Parayre is reluctant to talk about specific product developments. "That's your deduction. That's a possibility," he replied to the question.

• Products are not the only part of PSA business undergoing a revolution. Recently opened and highly automated plants supply engines and transmissions to the whole group. Only two of the three promised new-generation engines have appeared so far, but they are already on half the group output.

Only last summer the Automobiles Peugeot Division (which now includes the Talbot line) adopted a radical approach to inventory control. With the aid of advanced computer systems it was able to reduce vehicle delivery time from five to three weeks. The customer not only receives the car quicker — but, more importantly, Peugeot is paid quicker. Cutting inventories was a group priority in the long struggle back to prosperity.

The Peugeot system may be common among other auto makers, but it represented a considerable breakthrough for PSA. Parayre says a similar system will be introduced by Citroen Division next year.

Another hurdle still to be leaped is introduction of a common wage policy for the group. PSA grew by acquisition, adopting different wage structures in the process.

It seems that recent management changes involving former Banque Nationale de Paris chief Jacques Calvet are part of this.

Calvet, president of Automobiles Peugeot, takes up a similar title at Automobiles Citroen and relinquishes his position as vice president of the PSA directorship.

Calvet now is in day-to-day charge of the two companies. Parayre, it would seem, is the strategist, Calvet the tactician.

• Jean-Paul Parayre is perhaps Europe's least known car boss. To some extent that stems from the secretive and conservative car group he joined in September 1974 as director in general management.

Parayre, 46, is an engineering graduate of *Ecole Polytechnique*. He held a number of civil service appointments in the highways department, social affairs, industrial and scientific development department. He served briefly in 1974 in management of the Vernes Bank in Paris; his PSA appointment followed.

It was an historic time for what had been a provincial, family-run PSA group. It had just taken on an ailing Citroen — with some prodding from the French government — to become another major force in Europe.

In September 1976 Parayre became director of PSA's Automobile Division; the group has other interests in cycles, motorcycles, machinery and transport. Six months later he became a member of the PSA directorship and at the end of June 1977 he became president.

The acquisition of Citroen had been achieved reasonably successfully, and PSA's ambitions led it to acquire the Chrysler Europe empire (production operations in Great Britain, France and Spain) in the summer of 1978.

PSA was the leading make in Europe at the time, but its troubles were beginning, just as an economic recession was starting.

Retrenchment followed. The original plan to run Talbot (Chrysler) as a separate identity was soon abandoned, and Talbot joined Automobiles Peugeot. The dealer networks now are being merged, and Peugeot and Talbot products are mixed within the factories.

With intense competition in the market place, PSA's diverse, overlapping product lines were squeezed by the opposition. Its market share plunged by one-third, to be overtaken by Renault, Fiat, Ford and Volkswagen.

PSA pulled out of Argentina and closed a Talbot plant at Linwood in Scotland. It disposed of financial interests in commercial vehicle operations of Chrysler to Renault Industrial Vehicles, and recently pulled out its stake in specialist vehicle maker Matra.

Huge annual deficits accumulated — some FF 5.6 billion (around $700 million at today's rates) in the three years ending in 1982. The group expected to break even this year, but labor disputes over planned jobs cuts and French price controls pushed the target to next year.

Those were dark years for the PSA group, when executives seldom spoke to the media. Consequently, the future of the PSA group was taken lightly.

There are signs of change now, prompted in part by improving PSA fortunes in France — and a demise of Renault's — and tangible evidence about its new product direction in the form of the 205 and BX.

Two of PSA's four chassis have bowed. There is no confirmation, but it's believed the third will be a smaller one ar-

Peugeot S.A. president Parayre: Strategist.

Automobiles Peugeot/Citroen president Calvet: Tactician.

Goal is more U.S. sales

Broader 505 line plays key role

In the large U. S. car market, Peugeot S.A. group's presence is small. It seems like a lot of lost business for PSA, at a time when European rivals such as Daimler-Benz, Volvo and BMW are doing very well.

"Our intention is to increase our sales there (in the U. S.), but to keep the image of a European manufacturer of products of high technology," says PSA president Jean-Paul Parayre.

It indicates the opposite routes taken by the two big French auto makers — Renault (with financial links with American Motors) and PSA — in the largest single national market in the world.

Parayre traces Peugeot's presence in the U. S., from mainly a diesel auto retailer to introduction of the 505 gasoline sedan and station wagon models. "In the short term, our policy is to increase the sales of Peugeot through the 505, by diversifying its range with new versions, new engines and so on.

"With this policy we expect our 1984 sales to increase by 50 percent. The increase is important, the volume is less important, but the move is significant.

"In the medium term we will enlarge the range of cars in the U. S. by launching new models. But that's another story," says the president with a smile.

Is there a future for Citroen in the U. S.? Says Parayre: "Our policy is clear. We have to concentrate our efforts on one range of car and on one image, in order not to spread our money on to too many cars."

West German exports drop in first half

West German vehicle makers increased their European business in the first half of 1983 while their exports went into reverse.

The world's second-largest auto industry export machine recorded a decline of 5 percent to $11.76 billion in exports in the first half compared with a year earlier.

With domestic sales bouyant once more, however, (revenue was up 11 percent to $9.92 billion) the industry is aiming at matching 1983 production. That would mean around 4.1 million units and income of $49 billion.

In first-half 1983 West Germany produced 2.19 million vehicles, down 3.2 percent from a year earlier. Exports totaled almost 1.23 million, down 4.9 percent.

German producers slightly improved exports to European destinations to 1.01 million. As a result the country — already with a heavy bias toward European markets — became even more closely involved there.

More than four out of five German exports (82.6 percent) reached other European destinations in the first half of this year. A year earlier the proportion was 78.2 percent.

Shipments to Africa, the Middle East, Asia, Oceania and North, Central and South America were down.

There was a 29 percent decline to 105,000 in vehicles destined for the U. S. As a result, the U. S. slipped to fourth place behind the UK (296,000), France (158,000) and Italy (114,000). No other country received more than 100,000.

Japan received 12,000 German vehicles — three-quarters of all of Japan's imports.

The perplexing Jaguar sale

Anybody want to buy an auto company?

By Richard Feast
European Editor

Anybody in Detroit want to buy Jaguar, the British auto firm?

It will be for sale. But the vital facts—which are not widely known, even within the parent BL group—are to whom, when and for how much. Jaguar Cars Ltd. chairman John Egan says enigmatically that the company is worth "either nothing or a helluva lot."

The affair has been thrust into the public spotlight by a number of events. First was the solid return to power for a third term of Prime Minister Margaret Thatcher's Conservative government, totally committed to returning state-owned assets (such as BL, of which Jaguar is part) to private industry.

This was against a background of steadily improving Jaguar fortunes. Three years ago the company was losing two million pounds a week. Today it is producing and selling near record levels and, while its financial position is hidden within the corporate books, it is undoubtedly a prosperous auto maker.

Investments needed to see Jaguar well into the next decade have been made, courtesy of British tax payers. The latest is a $75 million plan to robotize its factories during the next five years.

This follows introduction of the six-cylinder AJ6 engine, only Jaguar's third new power plant since World War II. It is first going into XJ-S coupes and cabriolets, and next year will be the mainstay power unit for an all-new XJ40 sedan.

Jaguar has become very efficient, producing more cars with far fewer people. The story has been well documented. Less well known is that the company is now all-but autonomous with its own R&D, purchasing, financial controls, sales, marketing, product planning and manufacturing.

In other words, it is a salable unit, which it wasn't as part of BL cars with Austin, Morris, Triumph, MG and Rover.

• In mid-September BL's six-month 1983 financial report showed a $2 million sales profit, its first in four years and a sharp contrast to the $90 million-plus loss a year earlier.

Interest, tax and other deductions, however, gave BL a net loss of $73 million in first-half 1983, a third the size of the deficit for first-half 1982. Positive contributors this year were car and component operations, Austin Rover, Jaguar and Unipart. Land Rover Division was in a state of decline and Leyland Vehicles' financial status was horrible.

Austin Rover was probably profitable due to a bouyant UK market and a good market reception given the new Maestro; but the main contributor to car profits likely was Jaguar, although to what degree will not be known until BL's full-year finances are published next March. Then, for the first time, a breakout by divisions is promised.

At this point, analysts are saying Jaguar's value is likely to be as much as 12 times earnings. But how much is that?

All the unknowns are generating a fierce amount of speculation and rumor. Prime among them is a management buy-out backed by local investors.

Other routes could be a private flotation on the Stock Exchange or a straight sale to another group. Plenty of auto makers around the world would like to have the prestigious Jaguar name to bolster their luxury lines: General Motors, Ford, Chrysler, Peugeot, Renault, Fiat and all of the Japanese, for instance. But many could not afford the purchase at present (the European) and many would be politically unacceptable (the Japanese). That leaves the Americans.

Any purchaser would need to have substantial financial reserves. The immediate investment in product (engine and car) and plant (engine factory) have been made. But Jaguar will need plenty of cash to develop its next generation of products. The company undoubtedly is earning money at present from sales, but to a large degree as the result of the dollar/sterling exchange rate.

One Jaguar rival calls selling in the U.S. these days the equivalent of being given a license to print money. With a U.S. presidential election in the offing, the feeling in Europe is the dollar will remain strong; still, swings of a few cents can greatly upset calculations.

With well over half its production going for export in the U.S., Jaguar is aware that it could be hurt by an unfavorable shift in exchange rates. This is one reason for the major sales push into the rest of Europe, in particular to the home country of its two major rivals, Daimler-Benz and BMW.

The final unknown in the Jaguar sale is timing. Most bets are going on spring 1985. The main reason is that the government's busy privatization schedule is dominated by the sale of British Telecom in the fall of 1984 and of British Airways a year later. It would have to fit smaller commitments, such as the Royal Ordnance Factories, Cable and Wireless, British Ports and anything to do with BL, around the big ones.

By next spring, Jaguar's new sedan will not have been launched. The company has not officially said when in 1984 it will be unveiled, but everyone was led to believe it would be early. It now looks more like the latter part of 1984.

The appearance of the new car in fall 1984 will stimulate even greater demand for Jaguar products; after six months the money would be rolling in, the order book would be fat and Jaguar would look all the more attractive.

All of this assumes that XJ40 will not be a dud. Jaguar may be small—just 28,500 cars this year—but it has built an engine line to produce double that, and a second shift could see Jaguar churning out 60,000 a year within five years thanks to the robot plan. By luxury car standards, these are impressive numbers. The vast majority will be XJ40s with the new engine, unveiled a few weeks ago in 24-valve, 3.6-liter form in the latest XJ-S coupe and cabriolet. The models go on sale in the UK toward the end of this year. The European debut will be in January at the Brussels auto show. Two models will head into the U.S. starting next spring.

Next year's XJ40 will be similar in size and styling to current XJ sedans, but will be lighter, and more economical to operate and much cheaper to produce.

New Jaguar XJS with 3.6-liter engine.

Jaguar Cars' world volume up 42 percent

Jaguar Cars' world sales in the first half of 1983 totaled 14,528, 42 percent better than volume a year earlier.

North American sales — all but 200 of them in the U. S. — were 71 percent higher at 7,933.

Six-month sales in the domestic UK market of 3,541 were 8 percent above last year.

In the rest of Europe, Jaguar sold 1,744 cars (36 percent more); the increase in the rest of the world (including the Middle East, Australia and Japan) was of 26 percent to 1,280.

With 14,658 cars built during the first half of 1983, Jaguar production was 25 percent higher than last year. The six-month figure was above annual totals for each of the three years 1979, 1980 and 1981.

Jaguar turns to Japanese for robots

Jaguar Cars is turning to Japanese technology to robotize its low-volume luxury car plants.

The agreement was signed by the UK auto maker; Dainichi Kiko, of Japan, and the British-owned Dainichi Sykes Robotics, Ltd., a company specializing in automated manufacturing systems.

It is believed to represent the first use of robotics by a low-volume manufacturer. This year, Jaguar will build 28,500 units though there are contingency plans to double output to 60,000 within five years.

This new technology agreement is a clear indication of how Jaguar intends to reach such numbers: By purchasing the latest and best in automated, flexible systems.

It represents $75 million worth of orders for Diancho Kiko. Up to a third of the cost could be paid by the government under an innovation grants plan.

Initially, robots will be imported from Japan, but the plan is gradually to transfer manufacturing to Dainichi Sykes' Lancashire factory.

The equipment will be installed in Jaguar's factories over the next five years. The company has three main units: A body plant at Castle Bromwich, an engine factory at Radford and final assembly and trim at Browns Lane, Coventry.

The company has a new six-cylinder engine (AJ6) and will have a new sedan within 18 months (XJ40).

The stream of positive news from Jaguar over the past two or three years is renewing interest in how and when it will be transferred from state ownership under BL to private industry.

Peugeot

Continued from Page 29

riving in 1985, and the fourth will be the biggest one, coming in 1986 or 1987.

Two of the three transmissions and two of the three engines have appeared. The others should show up within a couple years, though PSA will continue with what it calls "one-third of an engine," the V-6 jointly produced by Peugeot and Volvo.

Concentration will be on the Peugeot and Citroen names, though PSA officials insist the Talbot label will remain in the lower and lower-medium end of the market.

It is even believed that production of a "baby" Talbot is a current topic of discussion between PSA and the British government. Talbot UK was bitterly disappointed in not getting the 205 to assemble. The present ambition of the company — which recently returned to profitability — is to produce (along with a French factory) a small car some time from 1985 on.

Discussions between the two parties will result in some sort of decision "by the end of this year," predicts Parayre. Using the UK as a source for European demand, just as it has plans for its Spanish operation, is part of PSA's medium- and long-term consideration, he says.

While PSA's internal structure is being reorganized and reshaped, it is the new-product programs which give PSA most comfort as it looks ahead. "Our knowledge of the future product program is the cornerstone of our confidence in the future," says Parayre. His relaxed manner was that of a man whose major worries are past.

The mid-market Citroen BX (top photo) and lower-medium segment Peugeot 205 (bottom photo) play crucial roles in Peugeot's product strategy.

How Europe's market shares have changed

Group	6 mos., 1983	6 mos., 1982	1982	1981	1980	1979

Three states mull seat-belt bills

ANN ARBOR, Mich. — Michigan, Rhode Island and Minnesota are in a dead-heat race to be the first with a compulsory seat belt law.

Diane Steed, administrator designate, NHTSA, said New York requires holders of learner permits to wear belts. That affects about 900,000 drivers at any given time.

That state, too, by administrative action, increased mandated use of restraints to children aged 10 from eight.

Steed told a meeting of car maker technical representatives here that nationally child restraint use stands at about 27 percent. However, she said some 70 percent of those restraints are used improperly. Most mistakes stem from lack of tether use, she said.

She said 40 states and the District of Columbia have child restraint laws. About half those laws were enacted this year, she said.

Car production gains 5.91 pct.; total is 5,768,893

Output rises for '83 model year

By Mary Beth Mayer
Staff Writer

Auto production during the 1983 model year was 5.91 percent higher than the '82 model year, when output was the lowest in 21 years.

The car manufacturers produced 5,768,893 units during the 1983 model run, up from 5,447,135 in the comparable 1982 period. The 1983 total was the second lowest model-year output since 5,407,256 units were completed in 1961.

During the '83 model year, American Motors, Chrysler Corp. and Ford Motor Co. recorded rises in production, while Volkswagen of America and General Motors suffered declines.

Checker Motors ceased production in July, 1982; Honda began building Accords in the U. S. last November.

AMC's addition of the Renault Alliance to its production of homegrown models in Kenosha, Wis., more than doubled the maker's output. AMC's model-year total soared 137.99 percent, from 70,898 to 168,726.

Chrysler Corp. wrapped up the model year with 737,835 cars, 24.51 percent above the previous year's 592,605, but still below the 791,258 cars completed in '81.

Ford, the third auto maker which increased its model-year output, finished with 1,243,887 units, up 6.99 percent from 1,162,642 in 1982. Ford's total was also below its 1981 mark of 1,395,594.

Volkswagen of America plunged to 73,446 cars in the 1983 model run, a 28.46 percent decline from 102,664 built in '82.

Because of production losses at Pontiac and Chevrolet, GM's output fell off slightly in the '83 model year, from 3,516,326 to 3,511,491.

New nameplates for 1983 include Renault Alliance, Chrysler E-Class and New Yorker (FWD) and Dodge 600.

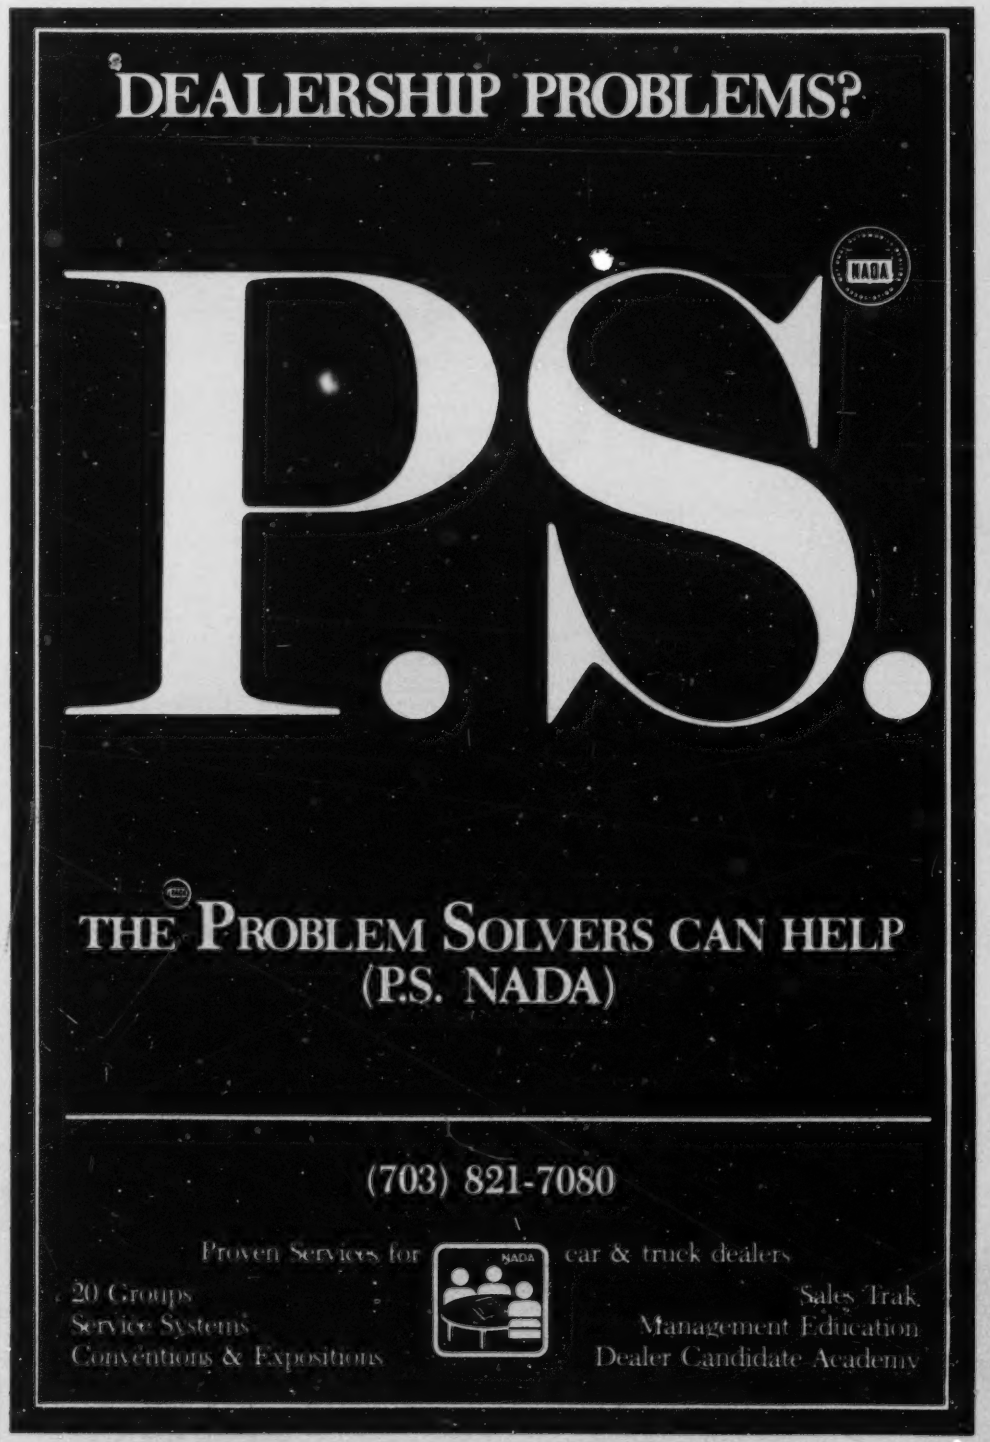
The manufacturers introduced the Ford Tempo, Mercury Topaz and Chevrolet Corvette last spring as '84 models. Production of those cars was not reported for inclusion in the total '83 model-year production.

Chrysler to use Motorola stereo

SCHAUMBURG, Ill. — Motorola, Inc., announced that its C-QUAM AM Stereo broadcasting system will be used next year in the radios Chrysler Corp. builds at its Huntsville (Ala.) electronics plant and installs in its cars and trucks.

Radios equipped with the C-QUAM chip and circuitry are able to receive broadcast signals in stereo from AM stations using the system.

Chrysler-built radios are installed as standard equipment in more than 80 percent of Chrysler's domestic cars and more than 65 percent of the company's trucks.



Division sees its role as THE key factor in auto market

ity, as well as reduced cost," he said.

Of greater interest to many in the audience were McMillin's remarks on powertrain controls.

Present computers, designed to handle basic engine control functions, are being extended to the limits of their capability. New and more powerful computers are needed, he said.

He touched on how electronic subsystems have been evolving, using the GM custom microcomputer chip set as an example. It has been upgraded and refined with added custom circuits while costing less at the same time.

Used Car Sales
Auction Averages

November to date	$5,161
Month ago	$4,864
Year ago	$4,636

Electronic controls for the first GM throttlebody injection (TBI) in 1982 required three circuit boards. The number required by engine control modules (ECM) was reduced to two in 1983.

"In 1984, a large number of our ECM's will be of a one-circuit-board design with a 38 percent additional reduction in size, a 37 percent added reduction in cost, and a projected 65 percent increase in reliability," McMillin said.

• GM has been highly innovative in its use of body computer systems—as opposed to engine control and comfort and entertainment systems.

In the next few years, body computer systems will be at work in suspension, lighting, steering and theft-deterrent systems. They'll provide only a single function or maybe multifunctional.

For example, an ant theft system might monitor glass breakage, vehicle tilt, hood tampering, ignition disabling, keyboard entry system and siren.

Delco body computers are controlling, or will control, cruising speed, passenger compartment temperature, body diagnostics, vehicle status and other zeal time functions.

"The 1984 Cadillac C-car has the first multifunction body computer system," McMillin said. "While the integration is transparent to the driver, this system is the springboard for follow-on, very visible systems.

"It is a multiprocessor-distributed system, which consists of a body computer module, two display heads, the climate control panel and fuel data center, and the engine control module connected by a bidirectional serial data link," he said.

In the earliest Cadillac throttle body fuel injection systems, a one-direction data link was used. Some data for the engine control system was extracted for use by the engine control system.

In the 1984 Cadillacs, however, a bidirectional system is used with information coming into the body computer being used by engine control and vice versa with engine control data used in the body computer system.

McMillin called the '84 arrangement an evolutionary step in elevating the Cadillac system into some very exciting electronic possibilities in the future.

Connecticut L-M deal building new quarters

MIDDLETOWN, Conn.—Town and County Auto Sales (Lincoln-Mercury) is building a new dealership on land adjacent to its present Newfield St. location.

President Michael Augeri recently received a 25-year award from L-M.

Rowand report

Continued from Page 18

much less expensively than by conventional circuits.

"By 1985 we will save about $2 million a year in this traffic," Roark said.

As volume mounts, costs may be about half what they would be using old-fashioned communications.

"We think the margin of savings will increase further during the '80s, so it's going to be attractive economically as far ahead as we can see," he said.

The new system will allow much faster communication than now is possible.

• Said Roark: "In computer-computer traffic we normally talk in terms of bits-per-second. The fastest data now for the Ford net is 9,600 bits per second. With the satellite, we'll be able to send at 56,000 bits per second and it will be possible to go to 1.5 million bits per second.

"That means we'll immediately be able to transmit data about six times as fast as we can now and, potentially, we could speed it up to 180 times as fast. That will be important as more business becomes oriented to telecommunications.

As an example of that orientation, Roark cited Ford's body and assembly operations where computer functions are being centralized in Dearborn. That will lead to what he called a tremendous amount of traffic between distant points and Dearborn.

Videoconferencing will be another job for the system.

By mid-1984, too, Ford hopes to be videoconferencing with European points via satellite.

The company has been active in videoconferencing in the U.S., but costs have escalated from about $200 an hour a few year's ago to around $1,000 an hour today. Roark said the satellite will slash those costs in half right off the bat and perhaps to as low as $200 an hour eventually.

Accuracy will be enhanced dramatically with digital transmission by satellite compared with analog now. Effective throughput will be enhanced, as they say in the computer game.

Now, because of error, throughput is about at about 80 percent efficiency. With the satellite and digital data transmission, efficiency should jump to 99 percent.

SBS has three satellites in orbit now and will launch two more in the near future. They send data at a rate of 48 million bits a second. It's all digital and the quality is superb, said Roark.

SBS is a joint venture of IBM, Aetna and COMSAT. Its satellites are made by Hughes Aircraft. Intelsat V is made by Ford Aerospace & Communications Corp.

Farish family awarded 25-year dealer pin

WASHINGTON, N. C. — Mrs. R. E. Farish Sr. and R. E. (Bob) Farish Jr. received a silver anniversary diamond pin for 25 years of dealer service from Ford Motor Co.

The Farish family had a Ford-Lincoln-Mercury dealership here from 1954 to 1980. The late Bob Farish Sr. became a dealer in 1954 with Hoell-Farish Motor Co. and later established Bob Farish Motor Co.

But it faces tough sledding in Senate

Local-content measure is passed by House

Continued from Page 1

enough to add several quick amendments. One requires a study by the Secretary of Transportation into the imbalance between the dollar and the Japanese yen.

Another amendment adds two additional consumer representatives to the U. S. Automobile Advisory Council that would be created by the bill.

• Following passage, sponsor Richard Ottinger, New York Democrat, said the bill will be able to pass the Senate if the U. S. experiences a "continued erosion of our industrial base."

He said Republican senators up for reelection next year would be hard pressed to vote against the bill, but conceded it would be a "difficult task" to win enactment.

Ottinger said the bill had been effective in winning the new voluntary restraint agreement with Japan and that the "House had the wisdom to keep this tool."

UAW President Owen Bieber said the vote "means we may have a small-car industry in this country" and that the bill would be a "proper subject for debate in the upcoming Presidential elections."

Extra push of the local content measure came from the somewhat unexpected hand of Ford Motor Co. It was learned during debate that Ford officials had urged some Congressmen to vote for the bill. Ford's position was that passage would signal the Japanese to address currency imbalance and other unfair trade practices.

The measure cleared the House last year in the final days of the 97th Congress by a vote of 215 to 188. It was brought back again this year, although support for the bill cooled as the auto industry began to reap the benefits of lower interest rates and the general economic recovery.

The bill is designed to curtail job loss from the growing acceptance of import automobiles in the U. S. by encouraging foreign firms to invest in American automobile and auto parts production.

Recently, the bill also has been promoted as a way to keep domestic manufacturers from expanding "outsourcing," or importing foreign made parts for final assembly in U. S. plants.

Chrysler Corp.'s importation of Mitsubishi cars, Ford Motor Co.'s possible importation of Toyo Kogyo made cars and GM's relationship with Isuzu and Suzuki have also been raised by lawmakers as points of concern. Each of the Big Three have expressed interest in increasing their reliance on foreign built cars as a way to broaden their product mix.

This is particularly true in the case of the subcompact. Auto industry analysts say it has become increasingly difficult for the U. S. industry to make a profit on the sale of small cars here.

Under the bill, manufacturers selling more than 100,000 cars in the U. S. would be required to use specific levels of American-produced content. This content could include advertising and insurance, as well as jobs and materials.

Content requirements would range to 30 percent for the 1985 model year, 60 percent for 1986 and 90 percent for 1987 and beyond.

The exact percentage of domestic content required of a manufacturer is determined from a scale of U. S. sales that starts at 100,001 cars and increases to 900,000 cars, after which the requirements level off.

Domestic-content requirements would be phased-in over a three-year period beginning with the 1985 model year. The bill sets domestic content levels at the higher number of either the domestic-content ratio a car maker achieved in model year 1984, reduced by 10 percent, or the percentage specified in a table published by the Democratic study group of the House.

Since the UAW first kicked off the bill during the recession of 1982, local content has been a controversial issue. It has been supported primarily by Democrats from the big auto industry states, including Ottinger, of New York, who twice introduced the bill, and Michigan's chairman of the House Energy and Commerce Committee, John Dingell, whose committee had important jurisdiction over the measure.

The measure is opposed by the White House and is conceded to have no chance for passage in the Senate at this time.

• Argumens in the House prior to the vote drew on a broad range of issues. But, the primary concern was whether the bill would result in more or fewer jobs in the U. S.

Proponents' arguments centered foremost on America's trade relationship with Japan and the Japanese auto industry. Pro-local-content legislators argued that a major source of U. S. unemployment was reflected in the ballooning U. S. trade deficit. They claimed that the deficit flowed in big part from a one-way auto trade with the Japanese.

Ottinger said the U. S. trade deficit is estimated to be $70 billion this year. According to William Ford, Michigan Democrat, half of that deficit will result from U.S. trade with Japan.

Under provisions of the domestic content bill, Japan would clearly be most affected. The Japanese have firmly opposed the bill and have said that a domestic content law could drive them out of the U. S. market altogether.

Both Nissan and Honda have assembly facilities in the U. S. and have indicated they might shut down these plants if the domestic-content measure is enacted.

Of considerable irritation to sponsors of the measure, is the lack of success of U. S. automotive products in the Japanese market.

While quoting figures on the degree of Japanese auto influence on the overall trade situation in the U. S., Congressmen such as Pennsylvania Democrat Joseph Gaydos were disturbed that less than one percent of autos sold in Japan are foreign-made. Gaydos said fewer than 35,000 foreign cars made it to Japan last year.

• Arguments for the bill that were based on Japanese penetration of the U. S. market came from the view that the auto industry is vital to the national economy. Supporters belittled opponents' claims that the U. S. is moving toward a service economy and that the need for an industrial base is diminishing.

Ottinger said 180,000 auto workers are jobless and that 600,000 workers in the parts industry were still unemployed.

Opponents of the legislation cited studies by the Congressional Budget Office, Wharton Econometrics, the Commerce Department and others that concluded the local-content bill would result in a net job loss in the U. S., if other nations retaliate with trade restrictions of their own.

The Wharton study estimated that by 1991 there would be a net gain of 58,000 jobs in the auto industry with the bill. However, this would be offset by an estimated loss of 423,000 jobs in other sectors of the economy. Domestic-content foes said the result of the bill would be akin to the Smoot-Hawley Tariff Act of 1930, which economic historians partially blame for the Great Depression.

Last year, MVMA and its member auto makers except Chrysler, were opposed to any domestic-content legislation. This time around, although General Motors has opposed the bill, the situation is less clear.

Last April, Chrysler Vice Chairman Gerald Greenwald endorsed such a bill, but cited it as the least desirable alternative.

Recently, when it became apparent that the bill would come up about the same time as a decision on the Japanese "voluntary" auto restraints, Chrysler Chairman Lee Iacocca endorsed passage of domestic content — and so told the Michigan Congressional delegation — as a way of sending a signal to the Japanese that Chrysler is "serious" about trade problems.

American Motors and Ford Motor Co. have taken similar positions, although no Big Three company — all of which have foreign partners — thinks content legislation is a "good" solution.

Since the bill appears to have no chance in the Senate, endorsement in the House is viewed by the companies as relatively harmless.

NADA also opposes the measure. After House passage last week, the dealer association said it will "continue to vigorously oppose a domestic content law because it will be devastating to both consumers and the retail automobile industry" because of higher prices.

What may have counted most heavily against auto industry protection were the record-breaking third-quarter profits turned in by Detroit only days before the House vote. This was a popular theme of the debate, even though those profits came after one of the worst slumps in the auto industry's history.

Although the margin of passage in the Democrat-controlled House was slim and its outlook in the Republican-controlled Senate is generally considered much less good, Senator Don Riegle, Michigan Democrat, has urged hearings as soon as possible.

The Senate bill has only 14 sponsors, not counting Riegle and Senator Carl Levin, Michigan Democrat.

New-car dealer count up by 94 for third quarter

Continued from Page 1

are encouraging — increases for the quarter and nine months and relative stability for the model year — it's too early to declare that a new era of dealer increases is underway.

The industry has been losing dealers for 28 years, and one big quarter doesn't signal a complete turnaround.

Chrysler Corp. is coming back strong from the decimation its dealer ranks suffered during the recession and its own financial travail. Ford Motor is moving upward, and GM dealer losses have lessened during recent quarters. But it would be wise to wait and see for a few more quarters.

The 1983 model year brought franchise gains for 10 of the 15 makes of domestic cars. Three Chrysler Corp. lines showed the biggest increases — 205 for Dodge, 203 for Plymouth and 180 for Chrysler. Lincoln added 57 locations, and Mercury picked up 52.

At GM, there were franchise additions of 35 for Buick, 25 for Oldsmobile and 20 apiece for Pontiac and Cadillac. Renault was up 14.

Franchise declines were reported for Chevrolet, down 70; AMC, down 49; Volkswagen, down 39, and Ford, down 4. Imperial was down 21. Although Imperial has been dropped, the franchises will remain in effect until the end of this calendar year.

For Chrysler Corp., the 1983 model year was a case of going from good to better in dealer totals. The company was up every quarter with gains of 8, 27, 61 and 73 for a total of 169. Its total of 3,798 compares with 3,629 when the '83 season began.

Franchise totals on Oct. 1 were: Chrysler, 2,824; Plymouth, 2,765; Dodge, 2,678, and Imperial, 409.

In addition to its 3,798 car dealerships, Chrysler Corp. has 8 that handle only Dodge trucks. They are not included in the corporation's car-dealer total or in the Dodge car-franchise total.

Ford Motor Co. opened the '83 model year with 5,454 car dealerships and, wondrously, closed the model year with exactly the same number. Ford lost 40 dealers in the first quarter of the model year and 11 in the second. Then it gained 21 in the third and 30 in the fourth to break even.

The latter number was Ford's biggest quarterly upturn in the 22 years for which such data is available.

Latest franchise counts are: Ford, 4,626; Mercury, 2,637, and Lincoln, 1,530.

Ford Motor has another 103 dealerships that handle only Ford heavy-duty trucks. They are not included in the company's car-dealer total or in Ford Division's car-franchise total.

At GM, dealer losses lightened as the model year moved along — 70 in the first quarter (last October-December), 50 in the second and 25 in both the third and fourth. The current total of 10,060 compares with 10,230 a year earlier.

GM franchise figures on Oct. 1 were: Chevrolet, 5,150; Oldsmobile, 3,160; Pontiac, 2,960; Buick, 2,940, and Cadillac, 1,595.

AMC-Renault had 1,554 dealerships on Oct. 1, down from 1,580 a year earlier. After gains of 9 and 1 in the first two quarters of the model year, there was a loss of 49 in the third quarter and a gain of 13 in the fourth. About 1,200 AMC-Renault points handle both makes.

Franchise totals on Oct. 1 were 1,426 for AMC and 1,329 for Renault.

There were 910 VW dealers on Oct. 1, down 39 for 12 months. After dips of 15 and 14 in the first two quarters of the model year, VW trimmed its losses to 5 in each of the next two periods.

Chrysler plant recalls workers, will hire 1,200

ST. LOUIS.—Chrysler Corp.'s nearby Fenton plant has recalled all its laid-off workers and is now seeking 1,200 new employes to man the second shift at Plant No. 2.

The company has adopted a new method of selecting workers. Present workers will refer friends and relatives for these new jobs.

Hiring for the Plant No. 2 second shift is expected to be finished by late November and training would start shortly thereafter. In mid-January, the second shift would be fully operational, and two plants will be employing approximately 8,200 people.

A company spokesman said that the new workers are required for assembly of the full-size rear-wheel-drive Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury.

Domestics gain 36 percent; imports up 16 percent

New-car sales surge in October

Continued from Page 2

Honda's October, 1983, total was 5,219.

GM increased its share of the domestic market to 61.76 percent from 60.74 percent during the month. Ford was up to 22.63 percent from 21.71 percent. Chrysler earned 11.43 percent compared with 13.56 percent a year earlier. AMC had 2.31 percent, down from 2.61 percent. VW came away with 1.08 percent, down from 1.38 percent, and Honda had 0.79 percent of the current year's October market.

Buick and Oldsmobile claimed record sales in October and all U. S. makes were up except Lincoln and AMC. Buick was up 43.69 percent, to 96,080 from 66,868, shattering sales records for any month in its history (June, 1973, was the former best with sales of 92,546 reported). Oldsmobile's 104,741 units were third best for any month and greater than the previous October record of 104,676 notched in 1978.

Chevrolet reported a 29.64-percent sales increase, Cadillac was up 26.46 percent and Pontiac sales mushroomed 66.51 percent. Ford was up 41.28 percent, Mercury was up 64.74 percent and Lincoln was off 10.70 percent.

Chrysler was up 34.03 percent, Dodge was up 13.03 percent and Plymouth was up 1.32 percent. AMC was off 53.64 percent, Renault Alliance/Encore was up 77.48 percent and VW was up 6.19 percent.

October import sales included records for the month for BMW, Jaguar, Mitsubishi and Volvo. BMW was up 20.66 percent, Jaguar was up 30.25 percent, Mitsubishi celebrated its first complete year on the market with a 171.15-percent sales surge and Volvo was up 57.30 percent.

Among the major Japanese imports, Toyota was up 32.71 percent, Nissan was up 4.02 percent, Honda was up 12.69 percent, Mazda was up 6.62 percent and Subaru was down 12.53 percent.

• European import results included a 38.43-percent gain for Saab, a 29.77-percent climb for Volkswagen, a 26.60-percent gain for Porsche, a 2.42-percent gain for Mercedes and a 12.17-percent decline for Audi.

While imports were subdued to 22.80 percent of the total October market from their year-ago 25.66-percent share, U. S. intermediates claimed 29.31 percent, compacts had 16.72 percent, subcompacts had 12.69 percent, standards had 12.68 percent and luxury models picked up 6.07 percent.

Excluding imports, intermediates took 37.96 percent, compacts 21.66 percent, subcompacts 16.42 percent, standards 16.09 percent and luxuries 7.87 percent.

Late-October domestic sales were up 26.52 percent, to 236,895 from 187,238. All major auto makers reported increases.

Ford was up 33.47 percent, GM was up 25.04 percent, Chrysler was up 9.84 percent, AMC was up 53.20 percent and VW was up 6.36 percent.

Ford earned 23.61 percent of the market for the period, GM had 52.84 percent, Chrysler held 12.09 percent, AMC had 2.91 percent, VW had 1.47 percent and Honda had 1.08 percent.

With nine selling days in the period both this year and last, the daily selling rate was up 26.52 percent, to 26,322 from 20,804. The daily rate for the month this year was 25,546 compared with 18,764 in 1982. There were 26 selling days each time.

Borg-Warner eyes joint venture with Clark Equipment

CHICAGO. — Borg-Warner Corp. and Clark Equipment Co. are exploring a joint venture to manufacture and market manual transmissions and clutches.

James F. Bere, chairman of Borg-Warner, and James R. Rinehart, chairman and president of Clark, emphasized that discussions are in preliminary stages and that no definite agreement has been reached.

Elements Borg-Warner might contribute to the joint venture include: Warner Gear at Muncie, Ind.; automotive clutch sales and engineering facilities in the U. S.; Borg & Beck do Brazil; the company's investment in Borg & Beck de Mexico, and Michigan Powdered Metal Products, in Livonia, Mich.

For Clark, elements might include its sales, engineering, warehousing and light-assembly facilities for manual transmissions at Kalamazoo, Mich.; the transmission business and plant of Equipamentos Clark Ltda., Brazil, and its investment in Transmissiones y Equipos Mecanicos, S.A., Mexico.

$49-over dealer attacks Fiero allocation plan

Continued from Page 3

eight for the entire 1984 model run.

Peterson said he was told that allocation of the Fiero is based on historical sales of Firebird. "The Fiero is not a Firebird," Peterson said. "It's an entirely new car. Why not base distribution on '66 GTO sales?"

Other dealers say that basing allotments of hot-selling cars, such as the Fiero, on previous sales history is the only fair method. Peterson argues it should be based on present sales, and orders should be filled as they are received.

Peterson said he has sold orders, with customers waiting for cars, while Minneapolis-area dealers are advertising that they have plenty of Fieros on their lots to choose from.

He said one of his customers, upon hearing that he probably would not get the Fiero he had ordered from Peterson, contacted Pontiac headquarters to complain.

Peterson said the customer noted that there were plenty of Fieros sitting on lots in the city and expressed anger that his order could not be filled. He was advised to buy one of those cars off the lot.

The customer refused, Peterson said, because the car would cost him $1,379 more.

*—AMC does not issue a breakdown for ten-day periods.

Month's total is 690,735

October car output best since '79

By Mary Beth Mayer
Staff Writer

In October, the domestic auto makers built 690,375 units—the highest total for that month since 1979, when 783,843 were finished.

October's total was the best for any month since June, 1981, when 712,524 cars were completed, and it led the year-ago month's sum of 415,197 by 65.65 percent.

Gains in output last week by Buick, Chevrolet and Oldsmobile partially offset production losses at Chrysler, which was crippled by a walkout of 3,200 workers at the auto maker's Twinsburg (O.) stamping plant.

The Twinsburg plant is Chrysler's sole supplier of such essential parts as roofs, doors and underbodies. The strike started last Tuesday (Nov. 1) and was still in effect at press-time.

So far, Chrysler's Belvidere (Ill.), Jefferson Ave. (Detroit) and Newark (N. J.) plants have been shuttered by the strike. Chrysler said that its two manufacturing units in St. Louis would close last Friday (Nov. 4), but would resume operations today (Nov. 7).

Chrysler estimated its auto output last week at 9,140, which was 62.75 percent below the 24,536 units built the previous week.

Last week, the U. S. auto makers scheduled 158,712 units, trailing the 163,947 built the week before by 3.20 percent, but 44.41 percent ahead of the year-ago week's 109,903.

Breakdown for the week by company was: General Motors, 62.47 percent; Ford Motor Co., 25.45 percent; Chrysler, 5.76 percent; American Motors, 3.59 percent; Volkswagen of America, 1.63 percent, and Honda, 1.10 percent.

So far this year, 5,690,371 cars have been completed, thus leading the year-ago output of 4,425,511 by 28.59 percent.

Fourteen auto assembly points worked overtime last week.

Seven GM facilities worked last Saturday (Nov. 5). Working two shifts were Arlington (Tex.), Doraville (Ga.), Fairfax (Kans.), Flint (B-D and G lines) and Janesville (Wis.). Baltimore and Pontiac P-line worked one shift Saturday.

Working extra daily and Saturday hours for Ford last week were Chicago, Edison (N. J.), St. Louis and Wayne (Mich.). Ford's factories at Atlanta, Kansas City and Lorain (O.) put in extra daily hours only.

This week, Ford plans extra daily hours at Chicago, Edison, Lorain, St. Louis and Wayne. Chicago and Wayne are also scheduled to work this Saturday (Nov. 12).

Porn publisher is arrested in DeLorean tape hearing

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — The DeLorean drug-trafficking case took a bizarre turn here last week as the focus shifted from the former auto maker to the publisher of what is considered a pornographic magazine.

Larry Flynt, publisher of Hustler, found himself in U. S. District Court last week under arrest after he refused to comply with a subpena issued by Judge Robert M. Takasugi.

Takasugi ordered Flynt to appear and turn over an audio tape that purports to show that DeLorean was threatened by government informant James Timothy Hoffman when the former auto maker attempted to pull out of the drug deal that led to charges here.

Flynt did not turn over the tape nor did he reveal where he got it. Takasugi ordered Flynt to return to court Nov. 14 when the hearing on the tape and its source will continue.

• Flynt was hauled into court by more than a dozen U. S. marshals after the publisher defied the judge's order to appear early last week. He said he feared for his life and said he would answer any of the court's questions if Takasugi would come to his Bel Air mansion.

Takasugi denied the "change of venue" and ordered Flynt arrested. It was also reported that Flynt would appear before a grand jury investigation into how he obtained videotapes of the government sting operation.

It was the airing of the videotapes that caused the indefinite postponement of DeLorean's trial.

Truck production reaches 5-year peak for October

October truck output reached 241,463, making it the best month of production in more than four years, since 292,897 units were assembled in June, 1979.

Last month's sum was the best for October since 1978, when 364,473 trucks were finished. Last October, 141,422 trucks were completed.

Last Thursday (Nov. 3), the makers built the 2-millionth truck of 1983, as truck production for the week was targeted at 57,504. The total for the week was 275 units over the 57,229 finished the week before and more than double the year-ago period's 26,725.

General Motors had three truck plants working last Saturday (Nov. 5). GM's Pontiac No. 5 and St. Louis points were on two shifts Saturday, while Janesville (Wis.) worked one shift.

Ford had its Kansas City, Norfolk (Va.) and Twin Cities (Minn.) facilities working extra daily hours last week, while its Lorain (O.) and Wayne (Mich.) points were on both daily and Saturday overtime.

October output in Canada is highest since '80

Canadian car and truck manufacturers produced more vehicles last month than in any October since 1980.

The car makers assembled 81,755 units in October, making it the highest month of production since 100,357 were built in June. It was the best showing for October since 88,333 cars were finished in 1980.

The truck manufacturers built 54,872 units last month, marking their highest monthly production total since 55,243 were completed in June, 1982. It was the top sum for October since 1980, when 55,943 trucks were built.

The car makers estimated last week's production at 21,208, up 4.27 percent from the 20,340 the previous week, but 46 units under the 21,254 completed in the year-ago period.

So far this year, 811,245 cars have been assembled, up 10.63 percent from 733,347 in the year-ago period.

Truck output last week was targeted at 10,638, off 22.74 percent from 13,768 the week before, but 23.06 percent ahead of 8,645 assembled in the year-ago week.

Chrysler Corp.'s Windsor Pillette Rd. plant worked only the first two days of last week due to a parts shortage caused by a strike at the company's Twinsburg (O.) stamping plant.

So far, there have been 3,347 T-115 minivans built at Chrysler's other Windsor facility.

59th year—$40 per year, $1.00 per copy

Domestic makers open '84 with 286 models, down 10

By John K. Teahen Jr.
Managing Editor

Eleven nameplates disappeared, four new ones were added and the domestic auto industry wound up with 286 models to start the 1984 selling season.

The total is down from 296 offered in the 1983 model year, an AUTOMOTIVE NEWS tabulation shows.

The present total will grow in the coming months. Still to appear are the front-wheel-drive C-cars from General Motors, the Oldsmobile 98, Buick Electra and Cadillac DeVille. GM will call them '85 models, but they will be part of the '84 sales picture if they arrive next spring as anticipated.

Other makers can also be expected to add a model here and there to their current ranges.

It is unlikely, however, that the total will grow as much as it did last year. The makers opened the '83 model year with 271 selections, and the count rose to 296 later on.

Ford Motor Co. was a big contributor to the '83 expansion. Its Tempo, Topaz, Thunderbird and Cougar lines all were late starters.

The current 286 models consist of 144 for GM, 81 for Ford Motor, 42 for Chrysler Corp., 15 for American Motors-Renault and 4 for Volkswagen.

(Only U.S.-built Renault and VW models are included. Honda makes one model in the U.S., but it is not included here because Honda also imports that model.)

At the end of the '83 model year, the domestic list showed 137 models for GM, 93 for Ford, 43 for Chrysler, 16 for AMC-Renault and 7 for VW.

Thus, GM shows the only gain for '84, an increase of 7. Ford is down 12, and there have been dips of 3 for VW and 1 each for Chrysler and AMC-Renault.

• Discontinued nameplates played a major role in the decline in the number of models for '84. As noted, 11 nameplates have faded from the scene.

American Motors dropped Spirit, Concord and Eagle SX-4. Chrysler Corp. dumped Cordoba, Mirada, Imperial and Dodge 400. Fairmount Futura, LN7 and Zephyr have disappeared from the Ford list, and GM got rid of Malibu.

New to the scene are Chrysler Laser, Dodge Daytona and Pontiac Fiero on the sporty side and Renault Encore, the hatchback version of Renault Alliance. In addition, Lincoln has updated a name because of a body change: Mark VII replaces Mark VI.

At AMC-Renault, the six new Encores just about balanced the seven models in the three lines that were dropped. Laser, Daytona and an expanded Dodge 600 series did the same at Chrysler.

Tables on Page 79.

In addition to discounting three lines, Ford Motor added and dropped models here and there throughout its lineup for a net dip of 12.

At GM, the major additions were the Fiero coupes plus station wagons for the A-cars—Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century.

Volkswagen dropped the Rabbit LS two-door hatchback and the Rabbit GL two-door and four-door hatchback.

For '84, the five domestic makers have added 41 models and dropped 51 for a net dip of 10.

• The AUTOMOTIVE NEWS new-model analysis includes all the models the domestic manufacturers are pricing and/or merchandising individually. It does not include engine options. For example, a Chevrolet Caprice Classic four-door sedan is one model even though it is available with a V-6 gas, a V-8 gas or a V-8 diesel engine.

The current 286 models consist of 105 four-door sedans, 133 two-doors, 11 convertibles and 37 four-door station wagons. (The two-door total includes hatchbacks, which some makers list as three-door models.)

The final count for '83 was 113 four-door sedans, 137 two-doors, 9 convertibles and 37 four-door wagons.

By market class, the 286 are divided into 63 subcompacts, 79

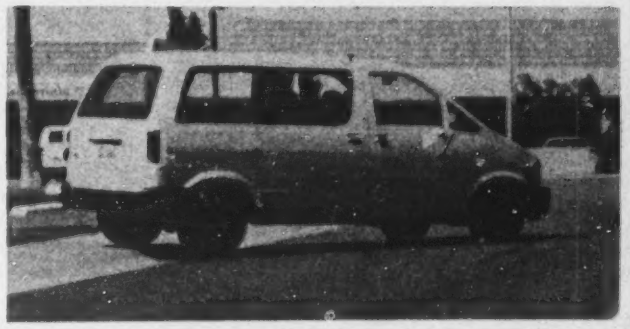
Van wars

Chevy, Ford to compete with Chrysler

Chevrolet and Ford Motor Co. are both grooming new rear-drive downsized vans as spring, 1985, competition for Chrysler's 1984 front-drive Caravan/Voyager models. Chevy's M-van (above) and Ford's Aerostar will have standard four-cylinder engines with V-6 options. Aerostar will also have an optional 2.3-liter Mitsubishi-built turbodiesel. Aerostar will be built at Ford's St. Louis plant. Note Aerostar's elongated A-pillar window.



Sales rate outruns stock buildup; 1,224,092 units on hand Nov. 1

U.S.-built new-car inventory dips to 48 days

By Richard A. Wright
Assistant Managing Editor

The domestic new-car inventory continued to climb during October, but not as fast as the sales rate did, and the industry opened November with a 48-day supply, down from 55 days a month earlier.

The inventory totaled 1,224,092 on Nov. 1, compared with 1,195,755 a month earlier. A year ago, the inventory totaled 1,293,704 on Nov. 1, a 69-day supply.

Shortages were widespread, particularly among standard and luxury lines, although the shortest of all was Pontiac's hot-selling new Fiero.

All corporate makers except General Motors increased their inventories during October. GM's decline in unit count, coupled with an increased sales rate, slashed its supply from 54 days to 42 days.

GM's 42-day supply was particularly short of standard and luxury units. Among smaller cars, the J-bodies were relatively short and Fiero was leanest in industry at a meager 17 days.

Ford Motor Co. opened November with a 58-day supply, unchanged from Oct. 1. Ford

Table on Page 80.

was shortest of standard Ford, Mercury and Lincoln models.

Chrysler Corp. had a 54-day supply, down from 58 days a month earlier even though the company's unit count rose slightly during the month. Chrysler's stock was quite well balanced, as it has been for some months now.

American Motors had a 76½-day supply Nov. 1, quite evenly balanced between its Renault and AMC lines, and up a bit from 73 days a month earlier.

Volkswagen of America had a 68-day stock of U.S.-built Rabbits, down from 82 days Oct. 1, while Honda had a 22-day supply of U.S.-built Accords, up from 12 days a month earlier.

The Nov. 1 domestic new-car inventory was divided this way: GM, 54.23 percent; Ford Motor Co., 27.24 percent; Chrysler Corp., 12.97 percent; AMC, 3.68 percent; VWoA, 1.52 percent, and Honda, 0.36 percent.

A month earlier, the domestic new-car inventory was divided as follows: GM, 56.31 percent; Ford Motor Co., 26.11 percent; Chrysler Corp., 12.52 percent; AMC, 3.43 percent; VWoA, 1.34 percent, and Honda, 0.29 percent.

Each market segment opened November with a lower days-supply figure than a month earlier, but the biggest decreases were in intermediate and standard.

The industry had a 59-day supply of subcompacts, a 55-day supply of compacts, a 47-day stock of intermediates, a 36-day supply of standards and a 47-day supply of luxury cars.

A month earlier the days-sup-

NEWSPAPER

Democrats pushing for legislation

Industrial policy drive is launched

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Industrial policy legislation is beginning to take shape for what promises to be an election-year drive for passage.

Democrats in the House and Senate began circulating industrial policy reports last week, urging legislation on a number of draft proposals. House Banking Committee chairman John J. LaFalce, New York Democrat, introduced an industrial policy bill he has worked on throughout much of this year.

Congressional Republicans and the White House oppose industrial policy, along with some Democrats. The Reagan Administration is concentrating instead on its National Productivity and Innovation Act of 1983 which would encourage joint research and development by relaxing some antitrust rules.

LaFalce's bill was introduced in association with a Democratic report from his economic stabilization subcommittee, titled Forging an Industrial Competitiveness Strategy. The report follows lengthy subcommittee hearings, chaired by LaFalce, on industrial policy issues.

A separate report on industrial policy from the House Democratic Caucus is also expected soon. This report may be more in line with a study released by the Senate's Democratic Caucus, which last week called for industrial policy measures less sweeping than the LaFalce proposals.

LaFalce has asked for the creation of a Council on Industrial Competitiveness which would coordinate the government's industrial policy. The council would be charged with analyzing existing policies, gathering data and building cooperation between business, labor, government and academia.

A Bank for Industrial Competitiveness would also be established under the LaFalce proposal, with the purpose of financing older industries that are in need of modernization, and providing capital to new, innovative firms that cannot obtain private backing.

According to the report, an Advanced Technology Foundation would also be created to fund applied commercial research in the same way the government funds defense research. Discoveries made through the research process would be made available to all U. S. firms, the report said.

The Bank for Industrial Competitiveness is perhaps the most controversial aspect of the plan. The bank would initially be funded by $8.5 billion from the U. S. Treasury. Beyond this amount, the bank would have to obtain funds from private financial markets.

The bank would make market rate loans, rather than subsidized grants, and any below-market-rate loans would have to be made from the bank's own earnings, according to the report.

Also recommended was the creation of a market for industrial mortgages, where loans would be secured by plants and equipment.

• The Senate Democratic Caucus proposal is less dramatic in comparison with the House banking report.

Drafted by a group headed by Senator Edward Kennedy, Massachusetts Democrat, the plan would establish a presidential advisory council of leaders from business, labor and government. The council would gather data, review policy and suggest actions to aid older, basic industries and new, high-technology companies.

Under the proposal, industries seeking government assistance would first have to get the council's approval of a plan to increase competitiveness through new investment, worker training, wage concessions or other measures.

The LaFalce report said an industrial policy would integrate issues such as the General Motors/Toyota joint venture, the fourth year of voluntary restraint on Japanese auto shipments and the decision as to whether passive restraints should be required in all passenger vehicles.

The report said industrial policy was needed to develop a "common sectoral policy toward the automobile industry."

But auto industry witnesses who have appeared before LaFalce's committee have differed on the need for an industrial policy and on what form an industrial policy should take.

General Motors has taken a firm stance against the need for an industrial policy, while Ford Motor Co. and American Motors have taken a cautious approach. Chrysler Corp. has been more supportive of the idea by calling its government-assisted turnaround an "ad-hoc" industrial policy.

But the overwhelming sentiment among the domestic car manufacturers seems to be that the government should better enforce current trade laws and pressure foreign nations — especially Japan — to follow U. S. "free trade" practices more closely.

An urgent need for government action on international currency alignment seems to top the auto industry's wish list. This approach will "level the playing field," proponents argue.

But continuing employment problems in the wake of the recession and auto industry reorganization have made the UAW responsive to industrial policy proposals. However, the union still insists its local-content legislation must be the cornerstone of an industrial policy for the auto industry.

Californian makes commuter car

The Morton 3 commuter car, made by Morton Car Co., San Leandro, Calif., is powered by an air-cooled rotary gas engine. Fuel economy is 35 MPG and the car's top speed is 80 MPH, the company said. John O. Morton, pictured above, said that production will be 200 units the first year, with a goal of 2,000 yearly. The car will be sold for $6,000 and can be produced in a small factory with a crew of 12 at two units a day.

Service Index notches another monthly gain

By Francis J. Gawronski
Service Editor

The service and parts business in new-car dealerships continued strong in September as the rate of growth topped 15 percent for the fourth time in the last five months.

According to the Automotive News Service Index, service and parts volume in September amounted to 115.3 percent of that recorded by dealers in the same month of 1982.

The growth rate of shop business showed a gain of 15.1 percent in May, 15.6 percent in June, 7.8 percent in July, and 15.5 percent in August.

Although September's growth rate slowed slightly, it marked the seventh consecutive month in which new-car dealers' service-parts business has shown an increase over the comparable year-earlier period.

Also, for the fifth consecutive month, all five indicators used in the Service Index recorded healthy increases, led by sales of all parts and accessories, up 20.6 percent over the volume attained in the year-earlier month.

Shop parts sales, those used on both customer-paid and warwanty work, jumped 17.9 percent above the volume registered last year, while gross profit on all labor, parts and accessories — the most important indicator from the dealer's viewpoint — was up 16.8 percent above last year's gross.

Total labor sales (customer-paid and warranty) topped last year's volume by 12.2 percent, while repair orders written were up 6.6 percent. In August, ROs were up 12.8 percent over the year-earlier figure, the best showing since July, 1978, when orders showed a 16.9 percent increase over number the year year before.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

Because of the increase recorded in September, service and parts business for January-September rose to 109.2 percent of the year-ago volume, compared with 108.4 percent escalation for the January-August period.

Gross profit showed a gain of 11.0 percent for the nine-month period, followed by sales of all parts and accessories, up 10.9 percent, and shop parts sales, up 10.4 percent.

Total labor sales advanced 8.3 percent, while repair orders written were up 2.7 percent over the year-ago figure.

SERVICE INDEX
115.3*

	Sept., '83 vs. Sept., '82	9 mos., '83 vs. 9 mos., '82
Gross Profit on All Labor and P&A Sales	+16.8%	+11.6%
Repair Orders Written	+ 6.6%	+ 2.7%
Total Labor Sales (Customer & Warranty)	+12.2%	+ 8.3%
Shop Parts Sales (Customer & Warranty)	+17.9%	+10.4%
Sales of All Parts and P&A	+20.6%	+10.9%

*—Survey by Automotive News shows that dealers' service and parts business in Sept., 1983, was 115.3 percent of business in Sept., 1982. Service business in the nine months of 1983 was 109.2 percent of business in the corresponding period in 1982.

European-built Merkur is reported for L-M

DETROIT. — Lincoln-Mercury last week termed "speculative" a newspaper report outlining the division's plan to introduce a new line of European-built models beginning next fall under the Merkur (Mare Koor) name.

The first model, a version of Ford of Europe's rear-drive Sierra XR4, will bow as a 1985 model called the Merkur XR4Ti, according to the Detroit Free Press. "Merkur" is the German word for Mercury, the Latin god of commerce.

The XR4Ti will be powered by Ford's 2.3-liter turbocharged and fuel-injected four-cylinder engine, mated to a five-speed transmission. Price will be about $16,000.

The second Merkur model, to be introduced in the spring of 1986, as a 1987 model, will be a version of Ford of Europe's new Granada model, being developed under the Scorpio codename.

Scorpio, also designated DE1, will be a rear-drive four-door sedan that seats five passengers. In the U. S., it may be powered by a new 3.0-liter V-6 engine, coupled to a four-speed automatic overdrive transmission. It may be named the Merkur XR6i.

The Merkur sedan will be priced at about $22,000.

Both models are intended to be Lincoln-Mercury's direct competition to popular European models.

Additionally, the newspaper reported that Ford Division's Special Vehicle Operations unit is developing a high-performance turbocharged Thunderbird model for 1985 or 1986.

It's a jungle out there

Albert Guibara, a sculptor in California (where else?) has created this Hippomobile, based on a 1971 Mustang convertible. The body is fashioned from copper and brass. A sculpted bird hides the rear-view mirror, and the tail switches from side to side to reveal the gas-tank inlet. Equipped with a special sound system, the Hippomobile broadcasts genuine hippopotamus grunts and noises as it moves along. The car will be offered for sale at the Custom Car and Hot Rod Show at Long Beach, beginning Nov. 18.

Would clear up open-end lease status

House eyes bill to bar taking TRAC as a sale

By Miles Moore
Washington Reporter

WASHINGTON. — Representatives and spokesmen for the auto leasing industry argued before a House subcommittee on behalf of a bill that would permanently prevent the Treasury Department from classifying open-end leases as conditional sales.

If passed, H.R. 1607 would ensure that terminal rental adjustment clauses (TRACs) would not be taken into account in determining whether motor-vehicle leases are to be considered leases or conditional sales for tax purposes.

"The bill would settle a controversy that many members (of Congress) thought should never have arisen," said Rep. Sam M. Gibbons, Florida Democrat and sponsor of the bill, before the House Subcommittee on Select Revenue Measures.

Under TRACs, the lessee performs all maintenance and repairs and pays the lessor a monthly fee to cover such items as depreciation, insurance, license, registration and sales tax.

At the end of the lease — usually two or three years — if the leased vehicle is worth less than "Blue Book" value, the lessee pays the difference to the lessor. If it is worth more than "Blue Book," the lessor makes up the difference to the lessee.

According to the leasing industry, the open-end or TRAC lease has been in widespread use since the 1950s, with the lessors taking the tax advantages accruing from ownership. But in 1979, the Internal Revenue Service declared that open-end leases were to be considered conditional sales, giving the tax breaks to the lessees.

In 1982, Congress passed the Tax Equity and Fiscal Responsibility Act, which among other things stated that TRAC leases could not automatically be considered conditional sales until the IRS issued a final regulation saying that they could. The IRS published a proposed regulation in October, 1982, but has not yet issued a final rule.

• Passing H.R. 1607 would merely be showing favoritism to motor-vehicle lessors over lessors of airplanes, ships and other equipment, said Mikel Rollyson, the Treasury Department's deputy tax legislative counsel.

Rejecting the bill could have dire consequences for both auto lessors and auto manufacturers, the bill's proponents argued.

"Enactment of H.R. 1607 is necessary to prevent the IRS from continuing a course of action that would force motor-vehicle lessors to change the efficient way they have been doing business for more than 30 years," said A. Samuel Penn, president of the American Automotive Leasing Assn.

The need to change lease contracts in the event of the Treasury Department's victory would mean a significant short-term disruption in the auto leasing industry, according to two former deputy assistant secretaries of the Treasury — Dr. Gerald M. Brannon, now an economic consultant with the law firm of Piper & Marbury, and Dr. Emil M. Sunley, now director of tax analysis with Deloitte Haskins & Sells.

Under the conditional sales, the federal government would lose $50 per automobile, according to Sunley.

Conversely, passage of H.R. 1607 would grant the Treasury a small revenue gain — approximately $91 million in 1984-88, Brannon and Sunley said.

The House Ways and Means Committee has not yet scheduled a markup session for H.R. 1607. The Senate Finance Committee also has not scheduled markup on 1607's companion bill, S. 1161, on which hearings were held last June.

Making its mark

The first U. S. showing of the Mark VII for the public was a main event at the Boston Automobile Show. Joining in the festivities are, from left: B. J. Coughlan, Lincoln-Mercury general marketing manager; Al Kalish, chairman of the New England L-M Dealer Assn., and Robert L. Rewey, L-M general sales manager.

$70 million, says company, but what about public confidence?

Chrysler strike cost hard to assess

By Marjorie Sorge
Labor Editor

The six-day strike at Chrysler Corp.'s Twinsburg (O.) stamping plant cost the company about $70 million as it forced five assembly plants to close the first week of November, company sources said.

It also put another dent in the company's consumer confidence armor which Chrysler has worked so hard to shine.

The strike called by UAW Local 122 was settled Nov. 5 and a new contract was ratified by 804-293 on Nov. 6. The 3,200 workers covered by the pact returned to work Nov. 7 and all Chrysler plants were operating by Nov. 9.

The contract made changes in mandatory overtime schedules, relief time and health and safety regulations and added more janitors to the workforce.

"We pride ourselves in not taking things sitting down," said Paul Jeunnette, financial secretary of the local. "We hope we've stopped Chrysler from doing things at other plants — the takeaway sessions are over."

Jeunnette also said he believes the $70 million loss is "fictitious" and whatever money was lost can be made up.

"Nobody here wants to put the company out of business," he said. "We want to work, but we want a safe place to work."

Jeunnette also said he thought the strike "momentarily hurt Chrysler's public relations image with potential buyers, but that would be overcome.

• Thomas W. Miner, Chrysler industrial relations vice president, has said the strike was "costly and unnecessary."

According to one company source, the strike was caused by one man — Bob Weissman, president of the local. The source said Weissman told the company earlier he "would strike us when the time is right and they had us at their mercy."

Chrysler is currently working hard to increase output of its new Dodge Daytona and Chrysler Laser sports cars and is aiming at a January introduction of its new T-115 vans, the Dodge Caravan and Plymouth Voyager.

According to Jeunnette the production pace picked up about eight months ago and the Twinsburg plant has been working seven days a week during that period. Overtime was one of the major issues in the strike.

A Chrysler official said the plant did not work that much overtime until early September, and even then only about 90 percent of the workers in the press and assembly operations worked.

He said the company never had any trouble getting people to work the extended shifts.

Under the new agreement, 20 percent of those who work two weekends in a row will have the third weekend off if they want.

In the 1977 national contract, Chrysler and the UAW agreed to voluntary overtime for any plant that desired it. Twinsburg rejected the idea. According to Jeunnette, there was no problem with overtime then.

• Although plants could change from mandatory to voluntary overtime if they desired as long as they didn't flip-flop back and forth, Twinsburg chose to keep the mandatory situation. According to Jeunnette, workers there felt that accepting voluntary overtime might take work away.

Other provisions of the new agreement include an additional 12 janitors (the local wanted 42 more), the reinstatement of five people and records cleared and full back pay for six others previously disciplined.

In addition, the local maintained the 36-minute-a-day break time granted to production workers more than 20 years ago. Jeunnette said the company had taken away 12 minutes in some areas of the plant and was threatening to do the same in the entire operation.

In the health and safety area, presses leaking oil or spraying oil will be shielded by something other than cardboard umbrellas after five days, probably sheet metal.

U. S. says '84 autos are worth $110 more

WASHINGTON. — The value of quality changes for '84 domestic cars included by the government in its wholesale price index averaged $91.87 at the auto maker's level and $110.08 retail, according to the Bureau of Labor Statistics' annual assessment.

These are about half the average increase of $183.65 wholesale and slightly less than the average $221.70 retail increase in the sticker price.

BLS based its assessment on a review of manufacturer data of 17 similarly equipped '83 and '84 models used in the government's Producer Price Index, in its Consumer Price Index (used for living cost adjustments) and in the International Price Program.

The $110.08 retail value of the quality changes breaks down as follows:

1.—Better fuel economy and emissions control both currently and in anticipation of future requirements—$58.89.

2.—A negative adjustment of $12.09 because the federal bumper standard was relaxed from 5-MPH to 2.5-MPH impact speed.

3.—Other changes such as changes to standard equipment and changes for improved rust prevention—$63.28.

Separately, the Labor Department reported that the passenger-car wholesale index was 1.7 percent higher in October than in October, 1982.

Powers Design joins Zoe in production

LOS ANGELES.—Powers Design International, Newport Beach, Calif., will supervise all engineering, new-model design and production of Zoe Motors' Zoe Zipper passenger vehicles, utility vans and an expanded line of 3-wheel specialty vehicles to be ready for production in 1984.

Ronald Powers, president of Powers Design, will join Zoe Motors as senior vice president, new model design and production.

Attendance increases at Hawaii Auto Show

OAHU, Hawaii. — The Hawaiian Auto Show drew an estimated 170,000 to 175,000 people during the three-day exhibition, up more than 10 percent from last year.

Isuzu, Mazda offer incentives for truck sales

Isuzu and Mazda are offering new incentives on trucks.

Isuzu's "Holiday Domo" program runs from Nov. 1 to Dec. 31 and covers '83 and '84 trucks. Dealers earn $150 on every '83 standard pickup sale and $50 on the '84 version.

They also earn $600 on '83 2WD Deluxe diesel pickups and $250 on '84s. Again, they earn $400 on '84 2WD Deluxe gasoline models and $150 on the '84 versions.

Finally, they earn $250 on the '83 4WD Deluxe gas and diesel pickups and $150 on the '84 versions. A special LS model luxury pickup earns $250 for the '83 and $150 for the '84.

Mazda Central is running a Nov. 1-Dec. 31 "Truck Treasure" incentive for sales managers on '84 pickups.

Mazda East still has its Sept. 1-Dec. 31 dealer incentive on trucks, paying $100 to $400 for various levels of accomplishment.

If U. S. makers import their small cars from Japan

Bidwell warns of huge job losses

By Kathleen Hamilton
Financial Editor

TROY, Mich. — About a half-million U. S. jobs will be lost if U. S. makers — led by General Motors—import their small cars from Japan, according to Bennett E. Bidwell, Chrysler Corp. executive vice president.

U. S. makers must keep trying to become competitive with the Japanese auto makers and, in order to do so, some of the rules of the game must be changed, Bidwell told his audience at the Michigan State University Annual Greater Detroit Management Confefernce here.

Abandoning the auto industry would mean a "lost generation" of permanently unemployed workers, Bidwell said. The problem could last more than a single generation, he said.

"Who are high-tech America's biggest customers? The car companies," he said.

"With a computer in every car and two computers in some. With more robots than any other industry. With more CAD-CAM facilities than anybody. The three biggest customers of IBM are, in order, GM, Ford and Chrysler."

High-tech America can't sell its computer chips to China or Korea, Bidwell said.

• U. S. truck makers are already competitive with the Japanese; it will take a little longer for cars, he said.

Despite the fact that six of the last 10 years have been recessionary ones, the U. S. auto industry has doubled its average fuel economy, met tough emissions and safety standards, converted to front-drive, designed cars with new sizes and shapes, automated factories, improved quality and kept prices below the general inflation rate, Bidwell said.

He cited a number of services which led the nation's industries in price increases during the last 15 years, reminding his audience that the U. S. is supposed to be most competitive in services.

"Don't put the whole productivity rap on manufacturing," he said. "It seems to be raising its prices less than service industries in general."

U. S. car makers need help from Washington to compete in the international market, he said. Taxation and exchange-rate policies give the Japanese an advantage of nearly $1,000 per car, he said.

If GM decides it cannot compete with what totals a $2,000-per-car Japanese advantage, Ford Motor Co. and Chrysler will have to follow GM and import small cars.

"Combined, we'd all bring in a million-and-a-half or so," meaning job losses in supplier industries as well as in auto manufacturing.

"We've got a $600 million small-car program scheduled for 1986 in our Belvidere (Ill.) plant, and it's a helluva car," Bidwell said. "We'd like to build it. It researches like gangbusters.

"But we don't have that kind of money lying around in loose change just to prove a point," Bidwell said.

Footprints on ceiling

Michigan enacts law to restrict warranty audits

By Roger Rowand
Engineering Editor

LANSING. — Legislation considerably tipping matters in favor of dealers in dealer-manufacturer relations has become law in Michigan.

It lessens factory rights in matters of warranty work audits and reopening of closed dealerships and includes a feature that's being called dealer severance pay.

While somewhat similar legislation has been passed in about 30 other states, the fact that Michigan is the auto makers' home turf adds a dash of irony to the action here.

The new legislation is in addition to conventional business laws covering selling agreements. Those close to the scene here say its provisions all are favorable to the dealer.

For example, under the new rules, the time allowed for a manufacturer to institute a warranty work audit is reduced to 15 months from 24 months, except in claims known to be fraudulent. With fraud, there is no time limitation.

Too, if a dealer closes up shop, voluntarily or with action by the manufacturer, the manufacturer must pay the dealer up to $20,000, or a year's rent. The amount will be equal to the dealership's annual fair rental value. That's being called dealer's severance pay.

Another provision of the new legislation calls for a significant change in rules covering reopening of points.

Formerly, if a point reopened within two years the new owner did not need to go through the full drawn-out regulatory procedure required in opening a new point. With the new rules, however, the time period is reduced to one year.

That, in effect, will tend to reduce the number of new dealerships offering competition to existing dealerships, some of those on the scene said.

As elsewhere, Michigan saw many dealerships close during the recession. Now, with better times, it is expected the factories will want to reopen points as quickly as possible.

Another part of the Michigan legislation relates to manufacturers' sales and service promotions. It requires payment of dealer claims within 10 days of their approval by the manufacturer. There previously had been no time requirement.

Seattle may get new stricter emission tests

SEATTLE. — New and stricter motor-vehicle emission tests are being proposed by Ron Holcomb, Washington Department of Ecology.

The new standards, if adopted by the department, would become effective next year and, according to Holcomb, "nearly 25 percent of the vehicles operated in the Seattle area would fail to meet the new requirements."

Vehicle emission testing began in Seattle in January, 1982.

"The major change," Holcomb said, "would be a designation of parts of Spokane as being out of compliance with U. S. clean air standards. In addition, we will tighten the standards for the Seattle area to get the greatest possible reduction of pollution."

August total is 246,080

Import registrations up; market share drops

By Jenny L. King
Staff Writer

Registrations of new imported cars were up 14.84 percent in numbers but fell 2.34 percentage points in market penetration during August compared with 1982, as domestic registrations outpaced them in the early months of what seems to be a real recovery from the four-year recession.

According to figures compiled by R. L. Polk & Co., import registrations this August climbed to 246,080 compared with 214,290 in 1982, an increase of 14.84 percent and almost 32,000 units. Import market penetration fell to 31.82 percent from the record 34.16 percent set a year ago.

Gains by a few scattered individual makes were sandwiched between shrinking shares for the major importers. For example, Toyota was down 0.95 percentage points, Nissan was off 0.16 percentage points, Honda was down 1.18 percentage points, Mazda was off 0.92 percentage points and Volkswagen was down 1.11 percentage points.

Renault Alliance, counted as an import by Polk, earned 3.42 percent of the August import market in its first year on sale in this country. Subaru gained 0.09 percentage points. Volvo was up 0.07 percentage points and Mercedes was up 0.07 percentage points.

Ten imports combined to represent 86.58 percent of the market this August, down from the top 10 taking 89.42 percent in 1982.

Year-to-date market penetration through August was unchanged from the preceding year: 29.75 percent. In straight numbers, registrations were up 15.66 percent for the eight months, to 1,731,826 from 1,497,322.

Toyota dropped 2.24 percentage points, Honda (which includes imported and U. S.-built cars) was down 1.56 percentage points, Mazda was off 0.21 percentage points, Subaru was down 0.39 percentage points and VW dropped 1.25 percentage points.

Nissan climbed 0.34 percentage points, Volvo was up 0.17 percentage points, Mercedes was up 0.08 percentage points and BMW was off 0.01 percentage points. Renault Alliance moved into the top 10 with 4.93 percent of the market and taking seventh place in the rankings. Audi was bumped from tenth place into the others category.

Ten imports took 87.92 percent of the year-to-date import market, down from 90.18 percent in 1982.

In an August-to-August comparison, Japanese penetration of the U. S. market dropped to 73.97 percent this year from 79.13 percent in 1982. West German-built cars were up to 10.18 percent from 9.27 percent, Swedish products had 4.47 percent this year compared with 4.23 percent and U. S. cars went to 8.42 percent from 4.12 percent.

• Following are totals by country of manufacture:

	August, 1983	August, 1982
Japan	182,016	169,566
West Germany	25,056	19,870
United States	20,715	8,832
Sweden	11,007	9,064
France	4,982	4,626
Great Britain	1,434	914
Italy	731	1,146
Ireland	139	272
TOTAL	246,080	214,290

For the first eight months of 1983, Japanese imports claimed 73.36 percent of the market, down from 78.05 percent. German cars had 9.75 percent, down from 9.81 percent. The U. S. climbed to 9.30 percent from 4.34 percent.

	8 mos., 1983	8 mos., 1982
Japan	1,270,404	1,167,709
West Germany	168,772	146,829

New officers for Detroit dealers

New officers of the Detroit Auto Dealers Assn. are, from left: Robert Sellers, Bob Sellers Pontiac-GMC, Inc., Farmington, treasurer; Lou LaRiche, Lou LaRiche Chevrolet, Inc., Plymouth, vice president; Robert Brent, Warren Chrysler-Plymouth, Inc., Warren, president; David Fischer, Suburban Motors Co., Inc., Troy, secretary, and Daniel Hayes, executive vice president.

NHTSA cancels wheel survey for lack of bids

WASHINGTON.—NHTSA has canceled a planned "wheel experience survey" in which it hoped to obtain information on problems with the structural integrity and other features of vehicular wheels.

The agency sought a contractor to get information directly from field reports of failures of all types of wheels, including original equipment and aftermarket, foreign and domestic, plain and custom.

According to an agency spokeswoman, however, NHTSA received only one bid on the contract, and that bid was unsatisfactory.

The proposal has been relegated back to its originator, Jonathan White, of the agency's Enforcement Division. It is not known whether NHTSA will solicit bids again at a later date.

High luxury series also join '84 lineup

Subaru adds 4WD turbo models

Subaru has added a turbocharged four-wheel-drive hardtop, a four-wheel-drive sedan and a High Luxury series to its 1984 lineup.

The Japanese maker now offers four-wheel-drive on every body style.

The GL Hardtop joins the GL Station Wagon and GL BRAT to become the third Subaru offered with Turbo-Traction, a combination of Subaru's On-Demand 4-Wheel Drive system (with automatic transmission and lock-up torque converter) and the company's new fuel-injected turbocharged 1.8-liter engine.

The horizontally-opposed water-cooled powerplant produces 95 horsepower and 123 pounds-feet of torque. The normally aspirated 1.8-liter engine yields 73 horsepower and 94 pounds-feet of torque.

The Turbo-Traction hardtop model offers air conditioning, power brakes and steering, tilt steering wheel, AM/FM four-speaker radio and an adjustable suspension system.

The new four-wheel-drive sedan includes automatic transmission with lock-up torque converter, as well as increased standard equipment.

Subaru's new High Luxury models are offered in the two-door hardtop and the four-door sedan body styles.

Those front-wheel-drive models are offered with choice of metallic silver, metallic dark gray or "extra" black exterior colors with blacked-out exterior trim. A velour-gray cloth is used inside. Four-window versions have high-back rear seats. The rear bench seat has a folding center armrest.

Standard High Luxury includes air-conditioning, power windows, power mirrors, power steering, cruise control, sunroof and a digital dashboard with a trip computer. High Luxury models also have an electronic radio with seek and scan functions, coupled with six speakers.

The front-wheel-drive line — two-door, four-door, hatchback, and wagons in DL and upscale GL trim — has received minor improvements, such as an upgraded sound system in DLs and a cargo-area light on GL hatchbacks.

New gear ratios and torque-converter stall speeds are used on automatic transmission vehicles and gear ratios have been revised on one manual transmission model.

25-year dealer

John (Red) Elson, right, Elson Ford, Inc., Sidney, O., receives a 25-year plaque from R. E. Jones, Ford Division Cincinnati District sales manager.

3 named to posts at Saginaw Steering

SAGINAW. — Homi K. Patel has been named manufacturing manager of Saginaw Steering Gear Division plants 4, 5, 6 and 7. He replaces Thomas C. Angers, who now is director of manufacturing operations for Allison Gas Turbine Operations, Indianapolis.

Patel formerly was manager of the Delco Products plant in Rochester, N.Y. In other Saginaw Steering changes, John W. Skelley, formerly assistant sales manager, was named manager of manufacturing engineering, and John S. Stiles was named sales manager. Stiles will continue to be responsible for international and aftermarket sales.

Subaru adds 4WD sedan for '84

With the addition of this new four-wheel drive four-door sedan, Subaru now offers all-wheel-drive on each of its body styles. Subaru has also added a new turbocharged four-wheel-drive hardtop to its '84 line.

U. S. cuts lead of Japanese in auto production

Japan's margin as the world's leading vehicle producer was cut back substantially by the U. S. in the first half of 1983.

Figures from France's CSCA — the country's equivalent of the MVMA — indicate that Japan's six-month production total amounted to almost 5.58 million vehicles, 2.5 percent above the same period last year.

Meantime, U. S. output grew by almost a fifth to over 4.43 million units. Japan's lead of 1.1 million compared with 1.7 million a year earlier.

In addition to stronger domestic demand, U. S. production figures reflect export demand for U. S. cars. Volume rose nearly 43 percent to 288,000 in the six months.

CSCA figures cover production, exports and registrations in six of the world's leading vehicle-producing countries — France, Italy, Japan, UK, U. S. and West Germany.

German production and exports were down, despite increased demand in the domestic market. UK volume was up, due entirely to cars, but exports dropped, mainly on account of the commercial vehicle business.

France gained in production and exports despite a weak domestic market. The picture was similar for Italy.

Vehicle production and exports

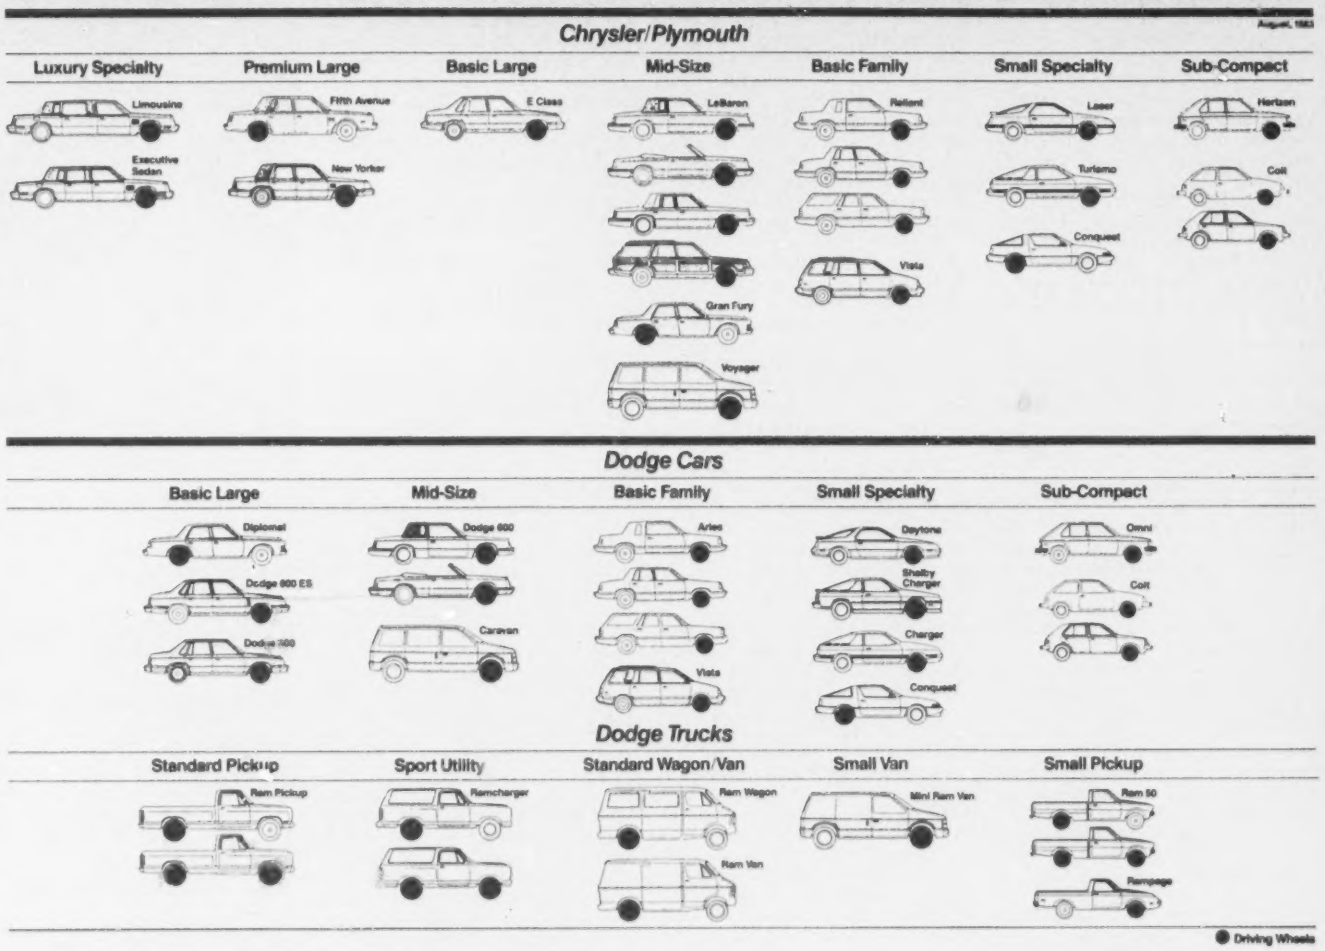
CHRYSLER CORPORATION 1984 PRODUCT LINE-UP



The Chrysler four dozen

Company is marketing 48 body/drive-wheel combos

Illustrated above is Chrysler Corp.'s 1984 model product line.

Being marketed by the company are 48 products, listed by the company's market designations, body style and driving-wheel system (front- or rear-wheel drive).

Included are 21 Chrysler/Plymouth cars, 17 Dodge cars and 10 Dodge trucks. Import models are included.

As shown, the only rear-wheel-drive cars offered by the company are the Chrysler Fifth Avenue, Plymouth Gran Fury, Dodge Diplomat and imported Conquest small-specialty car.

The company is marketing only two FWD trucks, however, the new Dodge Mini Ram Van and the Rampage.

The newest products from the company are the all-new Chrysler Daytona and Dodge Laser sports car, and the Plymouth Voyager and Dodge Caravan van/wagons.

Extensive aerodynamic styling went into the new models. The Daytona and Laser models have lower drag coefficients than any other Chrysler production car. The Voyager and Caravan have 40 percent less drag characteristics than earlier vans and wagons.

Coliseum Motor Co., Casper, Wyo., has observed its 70th anniversary as a Dodge dealership. Presenting a plaque to dealer Robert M. Robertson, center, are Don Neely, left, Chrysler Corp.'s Denver zone business management manager, and Jerry Novelly, zone manager. The dealership began in 1913 when Robertson's father negotiated an agreement with the Dodge brothers.

Mall

Continued from Page E-47

has become an automotive pioneer," Lataif said. "It's an innovative merchandising technique that provides a showcase of our new products and technology in an exciting and convenient location for shoppers.

"The location of this showroom allows Bill Currie Ford to reach the 25,000 shoppers who visit the shopping mall daily — shoppers who might not otherwise be exposed to our products."

Added Kess Evans, vice president and general manager of Bill Currie Ford: "We're taking cars to where the people are, offering them the convenience and comfort of a mall setting.

"This full-service showroom will be more informational and casual than the traditional car dealership. We want mall shoppers to come in and ask questions, ranging from car maintenance to technical product information, without feeling obligated. Besides car and truck sales, the mall location also will handle trade-in appraisals, financing, insurance and leasing, and will feature a racing and car care center."

He explained that maintenance and repair work will be performed at Bill Currie Ford's main dealership facility, about a mile from the mall.

Bill Currie Ford Center will employ 10 people—a seven-person sales staff and three management employes. "All sales personnel are new to our organization," Evans said. "They were specially selected and trained in a new program that is more technically oriented. This intensive training has given the sales people a solid background in all phases of Ford product design and engineering."

The showroom can accommodate seven vehicles and has a huge backlit projection screen for showing films.

In conjunction with the grand opening there also is a mall display of Ford's space activities and three Ford concept cars — the aerodynamic Probe IV, the Quicksilver and the Ghia Brezza.

On hand as Bill Currie Ford officially opened Ford Division's first U. S. dealer showroom to be located in an enclosed shopping mall: Assisting in the ribbon-cutting festivities, left to right: Louis Lataif, Ford vice president; Kess Evans, general manager, Bill Currie Ford; Phil Benton, vice president, sales operation, Ford North America; Bill Currie III, and W. E. Currie, Bill Currie Ford.

Beefing up backshop merchandising

Mazda manual helps dealer service

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — While the value of a strong parts and service operation to a dealer's overall profit picture is well known, the tools needed to build up that area are harder to define.

One tool that has been used for years by dealers in the salesroom but has yet to make its way to the back of the shop is merchandising.

Dealers can be considered masters of merchandising new and used cars, but when it comes to applying those skills to the service area, many times they fall short of the mark.

It isn't necessarily the fault of the service or parts manager — their primary function is to serve the customer, not try to sell them, as it is on the showroom floor. However, there are a number of techniques used to sell cars and to keep people interested and coming back to buy their cars at a particular dealer that can be used with similar results in the parts and service arena.

In order to help dealers apply these techniques in this area, Mazda Motors of America (Central) has developed a merchandising manual to help dealership personnel develop specific programs to boost sales in parts and service.

The manual is part of a program called Mazda Full Circle Service. The idea is to get Mazda owners to depend on their dealers to provide parts, service, accessories and their next car.

According to the manual, "effective merchandising can reinforce in the customer's mind the image of Mazda's dependability. It can help bring new and old customers back again and again. It can result in increased parts or accessory orders and more profitable maintenance and repair work."

The manual is also designed to give dealers ideas on how to build traffic by attracting new customers (not necessarily Mazda owners) for tuneups; retain Mazda owners; convert customers from buying at the competition, and encourage add-on and impulse sales.

The manual is divided into six sections, each dealing with a specific aspect of merchandising. One of the first sections deals with the selling environment.

It covers basic day-to-day merchandising at the point-of-sale for both parts and service departments. It gives tips on signage, basic sales procedures and sales-building techniques.

It also explains how to set up a self-service section in the parts department and offers guidelines on merchandising to insurance adjustors in the service department.

Another section deals with merchandising techniques, offering suggestions on sales-building special offers to customers as well as display and merchandising materials available from Mazda.

The section on advertising shows how dealers can use that medium to build traffic. It also explains how to prepare an ad budget, design ads, deal with advertising agencies and details the importance of direct-mail programs.

There is also a section on merchandising to the wholesale trade. The manual suggests that dealers get involved with selling parts to local body shops, independent repair shops and new and used car dealers. The section has a number of specific ideas for special offers and special services to wholesale customers including the need for a fulltime person to work commercial accounts.

Another section deals with incentives for extra performance from service and parts department personnel. The last section deals with the economics of merchandising. It lays out procedures and formulas for planning merchandising, promotion and advertising as well as setting sales objectives and goals.

Tom Diebert, parts manager for Tom Scott Mazda, Nampa, Id., has used a number of ideas in the manual.

"It's a good help mate," he said. "I've revamped the display area and I'm running weekly specials in conjunction with the service department." Diebert said he is also conducting a direct mail program that has proven quite successful.

"We're in the process of redoing the showroom and we'll be getting more space when that happens," Diebert said. "We'll go to a self-service area then.

"It's a good tool," Diebert said of the manual. "It's not something you leave in the file cabinet. You take it out and skim through it now and then."

Ray Jacobs, service manager at Martin Mazda, Woodland Hills, Calif., agrees. "I was happy to see that it covers the whole spectrum including parts. It teaches basic things like telephone techniques and face-to-face selling — we can use the manual both as a source of ideas and as a training tool for counter personnel."

Jacobs said his dealership has tried a number of ideas found in the manual even before they got the book with varying degrees of success. One idea, coupon specials, didn't work very well.

"We were considering doing that before we got the manual in," he said. "We had a very poor return."

Jacobs said part of the problem may have been the mailing list they were provided. It wasn't updated and consequently, many of the cars had been sold to other parties and many of the people who did come in were driving older vehicles. Part of the goal of the specials was to get recent buyers back in to build dealer loyalty.

One idea that has worked out very well is the development of a wholesale parts trade.

"We agree with the manual on that one," Jacobs said. "Ninety percent of the wholesale parts are handled by the parts manager. We had the manager deliver some parts personally to new accounts so they know who he is. Our wholesale parts business is up 18 to 23 percent."

Jim Lackey, parts manager at Haus of Mazda, Wichita Falls, Kan., also points to the wholesale parts trade as one of the better ideas in the book.

"It has helped my wholesale business quite a bit," he said. "I've hired another person and my monthly sales have gone from $30,000 to $44,000 to $45,000 a month. I do some out of town parts business, so I'm going to advertise out of town."

Lackey said his dealership is a dual and notes that the book offers some good general ideas that can be adapted to the other franchises.

"You may have thought about these ideas, but you never thought about them to the depth that they break it down. I really wasn't after the (wholesale) trade, but once they pointed it out, it worked out well."

"Actually, there is nothing new in the manual," Doug Wheeler, parts manager at Flannagan's Mazda, Missoula, Mont., said. "It reinforces what you've learned. It's good to go back through it from time to time. After the daily work routine, you get blase'."

Wheeler feels that the whole concept of Mazda Full Circle Service is important. "The logo is going to become a strong selling point for us," he said. "We're developing more loyal customers."

SEAL-A-BED™
PATENT PENDING
THE ULTIMATE PROTECTION FOR TRUCK BEDS
ALL-WEATHER PROTECTORS is proud to introduce the new alternative to caring for Truck Beds.
Made from TOUGH plastic resins, SEAL-A-BED creates a durable, protective coating, eliminating water entrapment, most chipping and scratching and rust damage.
SEAL-A-BED is the newest addition to the ALL-WEATHER PROTECTORS line of products which include Rustproofing, Paint, Fabric & Vinyl Sealants, and much more!

Chevrolet tops $2 million in scholarship gifts

WARREN, Mich.—The Chevrolet Scholarship Program has passed the $2 million mark in donations to college and university scholarship funds at televised football and basketball games.

The program, which began in 1971, currently has the ABC, CBS and TBS television networks chose the most valuable player of each team in the networks' televised National Collegiate Athletic Association football games.

Chevrolet then honors these players by contributing $1,000 to their school's general scholarship fund. In 1981, Chevrolet broadened the program to include NCAA basketball.

Chevrolet estimates it will award more than 230 scholarships in football alone this season for the highest single-season contribution level in the program's history.

The networks also choose a Coach Of The Year in each of the NCAA's four divisions, and Chevrolet contributes $2,500 in scholarship money to the general scholarship fund of each coach's school.

Riviera appoints Dorn to sales post

HILLSBORO, Ore. — Riviera Motors, Inc., has appointed Syd Dorn vice president and general sales manager of the wholesale division. He formerly was Eastern zone manager for Peugeot.

Riviera Motors is the Volkswagen distributor for Oregon, Washington, Idaho, Montana and Alaska.

Idea cars seize spotlight in Tokyo

Japanese polish high-tech image

Continued from Page 60

(Cd) of 0.22, says Toyo Kogyo.

Under the hood is a 16-valve, four-cylinder, 1.3-liter engine rated at 100 HP at 6,800 RPM. To improve low-speed running, there is variable valve timing, and also dual induction. In the dual induction system, the area of the port is reduced at low speeds to speed up gas flow — a similar system, developed by Yamaha and Toyota is already in use on Toyota's four-valve-per-cylinder engines.

• Toyota made the biggest splash with concept cars — there was the advanced FX-1, the TAC-3 leisure vehicle, and the SV-3 mid-engined coupe which is in fact a prototype of a car due to go into production next year.

The FX-1 is a long, low two-seater coupe, clearly inspired by Toyota's collaboration with Lotus, in that it has a backbone chassis and wishbone suspension front and rear, as pioneered by Lotus.

A smooth wedge shape, the FX-1 has a sloping nose with "slit beam" headlamps which are very shallow, and an outlet from the radiator in the hood — another idea that was pioneered by Lotus. The bumpers are made in RRIM plastics, and the glass is all flush fitting, including the long fastback panel, which terminates at the rather high tail. So shallow is the angle of the fastback, that rear visibility would be a problem. Nevertheless, the Cd is low at 0.25.

To ease access, the doors not only hinge, but also swing outward on arms. Under the hood, there is Toyota's 24-valve, two-liter, six-cylinder engine specially modified. First, it has twin turbochargers to improve low-speed response, and to boost the power output to around 200 HP. Then, it is designed to run on either three or six cylinders, the system being similar to that developed by BMW. There are also camshafts with variable valve timing to improve low-speed performance.

Futuristic hydro-pneumatic suspension with self-leveling is also adopted, as is a four wheel anti-skid system. There are new materials, in the shape of ceramic pistons in the brake calipers, ceramics to insulate the exhaust, a steel-plastics-steel sandwich hood and fiber-reinforced metal connecting rods in the engine.

• Not surprisingly, there is a combination LCD instrument panel, with a CRT to give information on any problems in the car, or to indicate which mode is operating — for example, whether the engine is on three or six cylinders. Such instrument panels were to be found in displays on many stands, with Mitsubishi and Honda showing complex navigation systems in which maps could be called up from a computer to be shown on a CRT.

Toyota was showing a number of modified autos, such as a Hi-Lux leisure vehicle, but there was also a special show vehicle in the form of TAC-3, an off-road fun car, with three seats — a centrally mounted driver's seat and two seats behind. Based on the running gear of the Tercel 4WD, the TAC-3 is an open car aimed at rough road use, especially in tropical countries.

More exciting, though, is the SV-3, the mid-engined coupe Toyota will start to produce next year. The engine is mounted transversely behind the driver and passengers, and the car is based on standard mechanical units.

In this case, the engine is Toyota's 1.6-liter, 16-valve, 130-HP unit from the Corolla coupe, mated to a front-wheel-drive transaxle. Suspension is struts all around, and the body has squarer, more angular lines than the Fiero, with concealed headlamps.

• So what was Nissan's answer? It produced the NX-21, intended to show the form of the next century. Thus, it is powered by a small ceramic gas turbine developing 100 HP — at present, the engine is but a mock-up — mounted between the rear wheels.

Evidently styled in Nissan's California studio, the NX-21 is a low four-seater coupe, with a curved sloping nose and a high tail. It has a large glass area, and headlamps that slope back at a very sharp angle. The Cd is quoted as 0.25.

With an overall length of 178 inches, the NX-21 rides on a very long 117.5-inch wheelbase, and is only 50 inches high. It is 70.5 inches wide. Unusually, there are huge gull-wing doors, while there is a CRT in the instrumentation.

Among the interesting prototype engines was a Toyota two-liter, four-cylinder, 16-valve unit, which might go into a front-drive sedan, and an Isuzu 1.8-liter turbocharged diesel with a number of ceramic components — including piston crowns, cylinder liners and cylinder roof, combustion chamber, valves and turbine rotors, Mitsubishi was also showing two turbochargers with ceramic turbine rotors.

Meanwhile, Mitsubishi was showing its new Sirius Dash engine, which has three valves per cylinder. There are two inlets, one operated all the time, and one operated at over 2,500 RPM only. The engine is turbocharged to develop 200 HP, but with this three-valve system, it is claimed that good performance is obtained at low speeds. This engine, boosted to 350 HP, is being used in the Starion four-wheel drive rally car, also on show.

• Apart from the Toyota SV-3, prototypes of cars to be introduced soon by Subaru and Daihatsu were in display. Subaru's J-10 is one more entry in the one-liter class, which is becoming more congested, with the arrival of the Suzuki Cultus, now on sale in Japan.

The J-10 is typical in most respects — 141 inches long, 59 inches wide, and with a 92-inch wheelbase. Styling of the three-door hachback on show was neat but unoriginal, although the car is different — it has four-wheel drive.

The three-cylinder engine is mounted transversely at the front, and the drive is taken from the rear of the transaxle to the rear wheels. Of course, not all J-10s will be four-wheel drive.

Daihatsu's Rugger is similar to its Taft four-wheel drive off-road vehicle, apart from being about 4 inches longer, and from being completely restyled. It has simple rectangular styling, which is a tremendous advance on the Taft.

Mitsubishi chose the show to

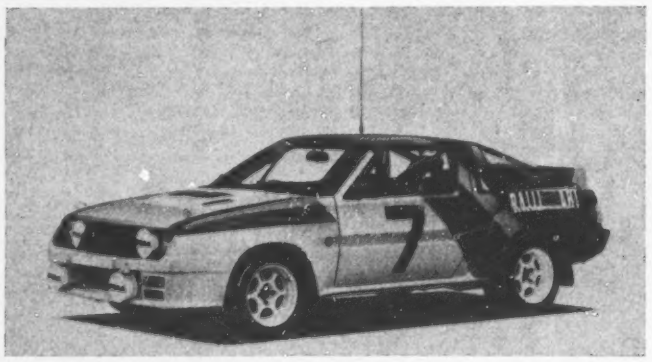
Mini-sized off-roader

Toyota's TAX-3 is a four-wheel-drive, three-seat prototype.

Another turbo

Latest in the line of Japanese turbo cars is this one-liter Daihatsu Charade displayed at the Tokyo Motor Show.



For a rally, really

Also unveiled at the Tokyo Motor Show was Mitsubishi's 350-HP four-wheel-drive Starion for rallies. Its engine has three valves per cylinder.

Norwegian government hikes taxes on new cars 10 pct.

By Richard Feast
European Editor

OSLO. — Passenger-car retailers in Norway are scaling down their year-end expectations following the announcement from the government that car taxes are to be raised.

Earlier expectations of 120,000 units for the year have been revised to around 100,000. The change is going to have serious repercussions for importers and dealers.

The 10 percent hike in car taxes adds an additional 5 percent to retail prices. Car buyers will be paying approximately 60 percent in taxes on a new car, making Norway one of the highest taxed countries in Europe in this respect.

For example, the pre-tax price of a Mercedes-Benz 190—around $12,000—jumps to $25,000 with taxes.

The announcement took the industry by surprise because the Norwegian budget only two days before had made no mention of the increase.

It had raised the tax on gasoline — from the beginning of December it will cost the equivalent of $2.75 a gallon. These twin events are the cause of the industry's concern.

Next year, revenues from car taxes will be higher than from any other single source. They will be the equivalent of 60 percent of the total revenues from Norway's considerable North Sea oil business.

In the eight months to the end of August, new-car sales in the country were down 3.3 percent at 74,900. The total last year was approximately 115,600.

Ford (15 percent) and General Motors (13.7 percent) were market leaders through the end of August. But the combined Japanese makers had a strong share of nearly 37 percent, led by Mazda with 13 percent.

THE AUTOMOTIVE AFTERMARKET, 1981-1988

Retail Sales in Millions of Current Dollars:	1981	1988
Service receipts, excluding parts	$ 26,783	$ 55,740
Replacement parts, excluding labor	23,460	44,462
TBA & chemicals	18,479	32,011
Motor oil for car use	2,802	3,861
Subtotal: Automotive aftermarket excluding motor fuel	$ 71,524	$136,074
Motor fuel for car use	90,426	197,267
TOTAL	$161,950	$333,341

Saab plans 17-pct. boost in passenger-car production

NYKOPING, Sweden.—Saab-Scania AB will increase its passenger-car production capacity 17.65 percent from its current annual rate of 102,000 to 120,000, beginning in 1985.

The company's board of directors said that it has approved a heavy investment program for the Saab Car Division assembly plants in Trollhattan and Arlov.

Worldwide Saab sales have climbed from 67,400 units in 1980 to an estimated 93,000 in 1983, the company said.

At Saab's main plant in Trollhattan, the capacity of the body shop and the paint shop will be increased from 75,000 to 90,000 units.

The final assembly capacity will be increased at both plants. In Arlov, which receives fully built-up painted body shells from Trollhattan, the assembly capacity will be raised from 15,000 to 22,000 units.

Together with Saab's Uusikaupunki plant in Finland, Saab's total available capacity will be 120,000 cars. The increased capacity will become available in 1985 and will require the addition of some 300 workers.

Saab-Scania AB also announced that consolidated sales during the first eight months of 1983 amounted to $1.6 billion, an increase of 9 percent from the same period last year.

During the first eight months of 1983, sales of Saab cars grew 39 percent worldwide, and 48 percent in the U. S., the company said.

Sales of the Scania Division's trucks, buses and industrial engines declined 11 percent.

Lee Tire & Rubber marks 100th anniversary this year

VALLEY FORGE, Pa. — In 1883, John Elwood Lee began winding bandages and making silk for surgeon's ligatures on his mother's sewing machine.

This year, the firm which sprung from Lee's medical supply activity — now called Lee Tire & Rubber Co. — is observing its 100th anniversary.

With the advent of the automobile, Lee saw the great potential in automobile tire manufacture. He began experimenting with tire production, and in 1910 built a new plant on the edge of Conshohocken (about 20 miles from Philadelphia) to produce JELCO automobile tires. Lee formed Lee Tire & Rubber Co. of Pennsylvania, Inc.

Lee pioneered the practical puncture-proof tire — an item that soon became popular with early motorists because of the hazardous road conditions of the era.

Before 1920, the trade name JELCO was dropped and "Lee of Conshohocken" was substituted. Henry Ford prompted the change because he thought a tire name that suggested jelly might hamper sales.

In 1914, Lee died and the next year Lee Rubber & Tire Corp. was formed.

In 1923, the company purchased Republic Rubber Co., of Youngstown, O., which produced Lee's line of mechanical rubber goods, industrial hose, belting and other items using rubber and plastic raw materials.

In 1965, Goodyear Tire & Rubber Co. purchased the Lee name and assets and established a wholly owned subsidiary, Lee Tire & Rubber Co.

The parallels between the Lee company today and the one that took root a century ago are few.

Market conditions and other business considerations have taken the firm from a purveyor of medical goods to a one-time producer of a host of domestic molded rubber goods such as door stops to today's line of truck, farm and passenger tires.

Ford nixes JELCO

When Lee Tire & Rubber Co. first produced tires, around 1911, they were called JELCO tires — for J. Ellwood Lee, the company's founder. JELCO was dropped when Henry Ford suggested the jelly-like name did not inspire confidence. This ad appeared April 15, 1912, in Country Life in America.

Goodyear changes abandoned plant into design center

AKRON.—Goodyear's 5-year, $125 million transformation of a 67-year-old abandoned tire plant into a development center ended as some 700 engineers and technicians moved into the facility.

The renovated building houses both experimental and race tire production and all tire design and engineering functions.

Goodyear said that in its new facility, engineers can conceive, design and build a tire and then walk to the testing laboratories or an 83-acre test track to get initial confirmation on the design.

"The goal of the Technical Center," said Fred Kovac, vice president of tire technology, "is to create a perfect environment and teamwork atmosphere for the development of tires for every transportation requirement of the future."

Delco Products opens sales office in Tokyo

DAYTON. — Delco Products Division of General Motors has opened a sales office in Tokyo, its first in Japan.

Allan Su, manager of Far East sales and formerly in the division's Detroit office, has been named manager of the new Tokyo office.

Import of cars with clean-air certification to be overhauled

EPA reviews gray-market rules

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Rules governing clean air certification of gray-market cars will be reviewed by the EPA in coming weeks.

The agency is contemplating an overhaul of current gray-market regulations in the face of growing compliance problems.

The agency published proposed regulation changes on the importation of nonconforming motor vehicles and motor vehicle engines earlier this year. Those regulations and public comments on them will be reviewed by the agency at two workshops.

The first workshop is scheduled for Nov. 29 at EPA headquarters here. The second will be held Dec. 7 at the Holiday Inn Embarcadero in San Diego.

Current law restricts the importation of automobiles and engines that do not conform to federal emission requirements.

Nonconforming vehicles can be conditionally imported, if a bond is posted with U.S. Customs and the vehicle is then brought into conformity with EPA emission requirements.

This can be done by modifying the vehicle to make it identical to one certified for sale in the U.S., or by successfully testing the car by the Federal Test Procedure at an EPA-approved laboratory.

• EPA's proposed rule changes would abolish the modification and testing options, as well as ban the importation or nonconforming vehicles in most cases.

One important exemption would be allowing an individual to import one gray-market vehicle for personal use and not for resale, if the car is more than five model years old. The vehicle would not have to meet federal emission standards.

The agency also proposed clarification of the definition of a racing vehicle and suggested modifying procedures and restrictions applicable to several other exemption categories.

Racing cars may now be imported free of emission restrictions, if they are used only for racing and testing purposes.

Comments in favor of the proposed changes have come primarily from car enthusiasts because the revision would allow the importation of exotic makes not available in the U.S.

But foreign and domestic manufacturers, as well as dealer organizations, have objected to the changes. They cite adverse air quality impacts, loss of sales by U.S. dealers and the inequity of requiring domestic vehicles to meet federal emission requirements while allowing the importation of foreign vehicles that do not.

• According to the EPA, the approximate number of nonconforming vehicles imported annually has increased from 1,500 in 1980 to 5,000 in 1982. In 1983, EPA estimates 8,400 gray-market vehicles will be imported.

As gray-market imports have increased, so have questions surrounding their certification under emission standards.

The EPA has reported an increasing number of allegations concerning falsification of test data and on vehicle modifications that are not safe or durable. Violations of various state laws and regulations have also been reported.

The EPA said that if the allegations are true, lawful gray-market participants will be placed at a competitive disadvantage. The agency said consumers may also be adversely affected if they buy imports that are unsafe or do not pass emission inspections.

Another problem is the increasing sale of nonconforming vehicles imported by "nonresidents." Nonresidents may currently import cars for personal use for up to one year. The vehicle may not be resold. However, the resale prohibition is being increasingly violated, according to the EPA.

The agency is also considering a change in the "small-volume" certification process.

Currently, importers for resale are considered "manufacturers." Manufacturers whose U.S. sales are less than 10,000 units per year may certify their vehicles under the "small-volume" certification procedure.

The EPA has published a series of issues and questions to be addressed by its gray-market workshops. The EPA lists Stanley B. Durkee, of the Investigation/Imports section as contact for the gray-market issue. His telephone number at EPA headquarters is (202) 382-2496.

U.S. model total cut by 10 for '84

Continued from Page 1

compacts, 82 intermediates, 27 standard-size cars and 35 luxury cars.

The '83 comparison: 62 subcompacts, 88 compacts, 78 intermediates, 30 standard-size cars and 38 luxury cars.

At this point in the '84 model year, Ford has the most models with 42 and Pontiac is close behind with 40.

Totals for other makes are: Buick, 37; Oldsmobile, 29; Mercury, 29; Chevrolet, 28; Dodge, 18; Chrysler, 13; Renault, 12; Plymouth, 11; Lincoln, 10; Cadillac, 10; Volkswagen, 4, and AMC, 3.

The leaders in the '83 model year were: Ford, 41; Mercury, 39; Buick, 37; Pontiac, 34; Oldsmobile, 30, and Chevrolet, 27.

'Expressive cars' called the key

A new GM strategy detailed by Hoglund

By Jesse Snyder
Crain News Service

LAS VEGAS. — Pontiac is trying to head specialty sporty imports off at the marketing pass.

The idea is that Pontiac's specialty offerings will force imports to compete in the lower priced sector rather than taking on Buick with its more expensive (and more profitable) models, according to William E. Hoglund, Pontiac general manager.

Hoglund and several Pontiac execs came riding down the aftermarket trail, hoping to pick up some hired guns at the 20th annual show of the Specialty Equipment Market Assn. (SEMA).

The more aftermarket performance and accessory parts available for Pontiacs, the more desirable those cars are in the showroom, Hoglund figures.

It's a new but well-worn path between aftermarket suppliers and Detroit, one that SEMA Chairman Jim Davis traces to the 1980 show when Direct Connection, Chrysler Corp.'s performance parts subsidiary, came looking for closer ties.

Buick followed in 1981 with its V-6 engine and Ford touted its SVO Mustang (for Special Vehicle Operations) last fall. Chevrolet is already signed up for a major presentation next year.

This year, Chrysler announced a Direct Connection supercharger and an aftermarket-inspired factory performance model of its Omni. Ford and Buick displayed more performance engines.

Pontiac pushed its new two-seater Fiero as the "perfect aftermarket car" because of its easy-to-replace plastic skin, sportiness and price.

• It displayed the 1984 Indianapolis 500 Fiero Pace Car (2,000 visual replicas go on sale in March), a racing Fiero and a 232-HP upgrade of Fiero's stock four-cylinder engine.

The show centerpiece was a Fiero convertible. Hoglund said he's shopping for a "quality coachbuilder" for 2,000 convertibles a year and is willing to share the concept car blueprints.

At a breakfast interview, Hoglund said he sees it as Pontiac's job to stave off the Japanese move into more expensive, higher-priced vehicles "before they move into Buick territory."

On a coffee-shop placemat, Hoglund sketched out a chart of General Motors' marketing plans, a cross-shaped map divided in one direction by price and another by "expressiveness."

Each large-volume division is shifting slightly farther from the center: Chevrolet gets the low-priced, less expensive quadrant; Pontiac low-priced expressive; Buick high-priced expressive; Oldsmobile high-priced, conservative; with Cadillac in the middle but high up the price ladder.

Pontiac's segment is a prime target of Japanese efforts to move off the "econobox" range into greener pastures. To counter, GM approved new "image" products such as the Fiero, the STE version of the intermediate 6000, a turbocharger for the comact 2000 Sunbird and a change in GM's policy of non-involvement in motorsports.

"That's the reason GM went with those costs," Hoglund said. "We couldn't be on the front lines with a BB gun."

Less costly is involving aftermarket producers for specialized market segments.

"SEMA members can provide performance parts and accessories more quickly and less expensively than we can," Hoglund said. "It also leaves Pontiac free to concentrate on modernizing the rest of its lineup. I see the market becoming increasingly fractionalized and these companies can just move faster than we can."

The aftermarket industry is moving fast in several directions after weathering a shakeout triggered by the recession, said SEMA's Davis. Performance equipment is enjoying the biggest surge, but the van and off-road accessory market is starting to perk again, he said.

Buick, Ford's Motorcraft subsidiary, and several speed-equipment marketers had incremental advances. But Direct Connection is introducing a new supercharger that will boost power 35 percent on Chrysler's standard four-cylinder engine. A supercharger increases air flow to an engine full time, while more common turbochargers do the same thing part time.

DC also markets stock Chrysler turbos as add-ons, but it is developing an intercooler (which cools intake air to boost turbocharger efficiency) for direct sale and dealer installation, said DC President Brian Schram.

A DC-designed package of aftermarket add-ons for the four-door Omni will be adopted as a factory model in 1985, which Chrysler execs privately call the Omni GLH, for Go Like Hell.

The revival in van sales is especially important to aftermarketers because many are customized. Stable interest rates also help van buyers trick out their vehicles as part of the purchase financing, Ravis said.

• New van products include roofracks that swing out and down for loading and another rack that slides backward to make a framework for a canvas-walled extension of the interior for camping.

Off-road vehicles also are regaining popularity. However, parts for the vehicles are increasingly sold through traditional auto parts stores rather than specialty shops, Davis said.

There's a new pop-up rear window for small pickups and collapsible canvas caps for big and small pickups. A new tailgate replacement unfolds into a ramp for loading equipment or cattle into pickups.

Electronic aftermarket products are limited to digital clocks because of high development costs and manufacturers' efforts to integrate such features into specific designs.

The SEMA show, combined for the first time with Automotive Internacional, the trade group for import-car aftermarketers, is an indication of reduced tension between members of the two groups. But that hasn't yet translated into marketing cooperation between the two, Davis said.

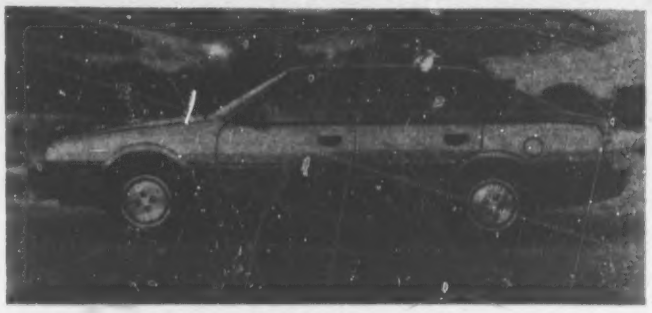
L-M deal opens

ST. PAUL.—Mark and Harvey Wilkins have become Lincoln-Mercury co-dealers at Wilkins Lincoln-Mercury, Inc., on the site of a previously closed dealership.



Spacious 626 from Mazda

By removing its rear cargo cover, but not touching the rear seats, the Mazda 626 touring sedan provides 21 cubic feet of luggage space. The front-drive 626 lineup—touring sedan, coupe and four-door sedan—is essentially unchanged for 1984.

Mazda simplifies GLC line, fine-tunes RX-7 for 1984

Mazda has fine-tuned its rotary-powered RX-7 sports car and simplified its front-drive GLC subcompact line for 1984.

A new four-speed automatic transmission with lock-up torque converter replaces a three-speed automatic as the optional gearbox in 1984 GS and GSL versions of the RX-7. Variable-assist power steering has also been added to the GSL's option list.

Numerous additional improvements have been made to the RX-7. The instrument panel has been redesigned, the ventilation system has been refined and augmented by use of a four-speed fan, the wiper/washer system has been revised and a slit has been added to the air dam to improve front disk-brake cooling.

Other RX-7 changes: New shifter lever and steering wheel, new circular dial controls (replacing pull and slide levers) and illuminated and lockable storage bins behind the bucket seats.

• To simplify the GLC lineup, Mazda dropped the rear-drive station wagon and the basic, Custom, Custom L and Sport trim levels of the front-drive model.

The '84 GLC line consists of the front-drive hatchback and sedan body styles, the hatchback offered in standard, Deluxe and Luxury trim and the sedan offered in Deluxe and Luxury trim only.

Mazda's 626 line, new last year, remains essentially unchanged for 1984.

The Sport version of Mazda's B-2000 truck has a new exterior scheme using two-tone paint, accent stripes and wide bodyside moldings. Also new is the choice of either high-back bucket seats or a bench seat with fixed head restraints.

Stockpile of U. S. cars whittled down to 48 days

Continued from Page 1

ply figures by market segment were: Subcompact, 65; compact, 59; intermediate, 56; standard, 44, and luxury, 51.

The Nov. 1 domestic inventory was divided this way among market segments: Subcompact, 19.65 percent; compact, 25.08 percent; intermediate, 35.58 percent; standard, 9.04 percent, and luxury, 10.65 percent.

A month earlier, the inventory was divided as follows: Subcompact, 18.61 percent; compact, 22.66 percent; intermediate, 38.52 percent; standard, 9.37 percent, and luxury, 10.84 percent.

The Nov. 1 days-supply figures by market class were:

Subcompact — Fiero, 17; Accord, 22; LN7, 38½; Escort, 51; Turismo, 51; Horizon, 53; Omni, 53; Lynx, 65; Encore, 65; Rabbit, 68; Laser, 68; Charger, 69½; Daytona, 76; EXP, 78; Chevette, 78½; Pontiac 1000, 81, and Alliance, 86.

Compact — LeBaron, 43; Cavalier, 46; Camaro, 46; Skyhawk, 46; Firenza, 53; Dodge 400, 54; Reliant, 56; Mustang, 57; Firebird, 58; Aries, 61; Topaz, 66; Tempo, 67; Cimarron, 69; Eagle, 72; 2000 Sunbird, 73, and Capri, 82.

Intermediate — Malibu, 26; Cutlass Supreme, 28½; Regal, 32; Century, 36; Cutlass Ciera, 38; Chrysler E Type, 38; Pontiac 6000, 45; Skylark, 46; LTD, 48; Marquis, 48; Celebrity, 50½; Omega, 51; New Yorker E, 51; Grand Prix, 54; Bonneville, 55½; Dodge 300, 57; Monte Carlo, 63; Cougar, 74; Thunderbird, 83; Citation, 83, and Phoenix, 88.

Standard — Olds 88, 23; LeSabre, 29; Grand Marquis, 31; Diplomat, 35; Cordoba, 38; Crown Victoria, 40; Gran Fury, 42½; Chevrolet, 51, and Parisienne, 56.

Luxury — Olds 98, 24½; Lincoln, 26; Electra, 29; Eldorado, 32; Seville, 32; Cadillac, 34; Corvette, 34; Riviera, 36; Toronado, 41; Fifth Avenue, 49; Mark VI/VII, 57, and Continental, 69.

Canadian dealers choose Forbes

WILLOWDALE, Ont.—Ralph A. Forbes was chosen to be president of the Federation of Automobile Dealers Assns. of Canada.

At a convention attended by 1,100 Canadian delegates, Forbes was chosen as the 42nd president of the national association that represents all franchised new-car and truck dealers, both domestic and import.

Forbes, who succeeds Ted Valentine, a Volvo dealer in Calgary, Alta., is the co-founder of Forbes Motors, Inc., Waterloo, Ont.

Week's auto output is 160,444

13 assembly plants work overtime

By Mary Beth Mayer
Staff Writer

With 13 assembly plants working overtime and Chrysler Corp. gradually returning to work after being crippled by a strike, the domestic auto makers scheduled 160,444 units last week.

Production lead the prior week's output of 157,125 by 2.12 percent and was 78.80 percent above the year-ago total of 89,736.

Breakdown for the week by company was: General Motors, 63.31 percent; Ford Motor Co., 23.04 percent; Chrysler Corp., 7.07 percent; American Motors, 3.58 percent; Volkswagen of America, 1.91 percent, and Honda, 1.09 percent.

So far this year, there have been 5,849,228 cars completed, up 29.62 percent from 4,512,732 units finished at this time last year.

Last week, four Chrysler points returned to work, after losing a few days of production due to a walkout at the auto maker's Twinsburg (O.) stamping plant.

Chrysler's Newark (Del.) and Jefferson (Detroit) plants resumed operations Wednesday (Nov. 9) with their regular two shifts of production.

The St. Louis No. 1 plant operated two 4-hour shifts last Monday and Tuesday and went to its normal two-shift operations Wednesday. The St. Louis No. 2 plant operated one 4-hour shift Monday and resumed its normal one-shift operation Tuesday.

Chrysler's Belvidere (Ill.) facility is slated to return to production today (Nov. 14).

Seven GM points worked last Saturday (Nov. 12). Working two shifts were Detroit, Flint (B-D and G lines), Janesville (Wis.), Lansing (B-D and G lines), Lordstown (O.) and Oklahoma City. The Baltimore plant worked one Saturday shift.

Five Ford facilities worked extra daily hours last week. They were Chicago, Edison (N. J.), Lorain (O.), St. Louis and Wayne (Mich.). Chicago and Wayne worked last Saturday as well.

Volkswagen's Westmoreland (Pa.) point was on an overtime schedule last week to fill fleet orders.

This week, Ford plans daily overtime at Chicago, Edison, Kansas City, Lorain, St. Louis and Wayne.

U. S. decides to permit glass-plastic windshields

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The government has decided to allow — but not require — glass-plastic glazing for windshields and vehicle windows because research data and limited field experience indicate it is useful in reducing injuries from lacerations.

The original concerns about abrasion and reduced visibility, although not eliminated, have been found to be minor, and NHTSA said the safety benefits outweigh possible problems.

All current vehicles have high-penetration windshields — glass for interior and exterior layers bonded to a plastic inner layer.

The Insurance Institute for Highway Safety, headed by Dr. William Haddon Jr., the first NHTSA chief, has long lobbied NHTSA to allow an alternative windshield design developed more than 10 years ago by Saint-Gobain Vitrage and in use since 1978 on European cars.

This design also was used in DOT's Research Safety Vehicle program on the Calspan-Chrysler car.

IIHS said some 625,000 hospital-treated facial injuries (146,000 severe lacerations and 29,000 severe fractures) occur each year. IIHS conducted joint research with the Maryland State Police.

• General Motors has tested 2,500 cars with this type of windshield in a rental fleet and plans to test glazing being developed by Libby-Owens-Ford. Ford is also planning a test fleet using 1984 models. Chrysler is the only auto company that opposed allowing the new type of glazing with polyurethane on the inside.

Saint Gobain's petition has been pending since June, 1980, and the advance notice for rulemaking was a "midnight" proposal made by former Safety Chief Joan Claybrook.

Problems initially envisioned include: Abrasion that would produce haze and reduce visibility, and fastening and removing objects like the rear-view mirror and even paper stickers and frost removal.

Concern was expressed about higher head injury criteria.

Truck production of 58,214 is best since July, 1979

With nine assembly plants working extra hours last week, domestic truck production was targeted at 58,214, making it the best week of truck output in more than four years.

Not since 58,483 units were built in the week ending July 14, 1979, have so many trucks been produced in one week.

Last week's total was slightly ahead of the prior week's 57,818 and more than double the year-ago week's 25,475.

Year-to-date, there have been 2,075,086 trucks assembled, up 22.78 percent from last year's 1,690,124.

General Motors had its Lordstown (O.) and Pontiac plants working two shifts last Saturday (Nov. 12) and its Detroit point working one shift.

All six of Ford's facilities were on daily overtime last week. In addition to those extra hours, Lorain (O.) and Wayne (Mich.) worked Saturday.

This week, all six Ford plants will again be on overtime. Lorain will operate on Saturday (Nov. 19) and the other points will work extra daily hours.

Car, truck output in Canada shows gains for week

Last week's Canadian car production was targeted at 22,876, up 11.79 percent from 20,465 units assembled the week before, and more than three times the 6,393 built in the year-ago period.

So far this year, the manufacturers have completed 833,378 cars, leading the year-ago output of 742,702 by 12.21 percent.

Truck production last week was estimated at 13,963, topping the prior week's output of 12,280 by 13.71 percent. It was more than double the year-ago week's total of 5,715.

The increase in production comes from Chrysler Corp.'s Pillette Rd. plant returning to operation after missing three days the previous week because of a parts shortage caused by a strike at the company's Twinsburg (O.) stamping plant.

Last week, the Pillette Rd. plant was not in operation on Monday (Nov. 7), worked two four-hour shifts Tuesday and resumed its normal two-shift operation on Wednesday.

Year-to-date, there have been 467,404 trucks completed, up 8.23 percent from 431,865 finished at this time last year.

So far, there have been 4,348 T-115 minivans built at Chrysler's Windsor facility, which was not affected by the strike.

Imported-car inventory dips to 29 days

By Richard Wright
Assistant Managing Editor

The inventory of new imported cars slipped a bit during October and the industry opened November with a 29-day supply, compared with a 30-day stockpile a month earlier.

The decrease was the result of a sharp increase in sales of Japanese-built cars. While European car inventories increased and their sales rate dipped a bit, the Japanese sales rate was sufficient to pare some of the import total.

There were 217,965 new imported cars in inventory Nov. 1, up from 199,339 a month earlier. A year ago, there were 365,467 new imported cars in stock, a much huskier 56-day supply.

The supply of new imported pickup trucks increased during October, reaching 70,778 units Nov. 1, a 58-day supply, compared with 51,375 a month earlier, a lean 32-day supply.

The combined imported car and truck inventory Nov. 1 totaled 288,743 units, a 33-day supply, compared with 250,714 Oct. 1, a 30½-day supply.

• As has been the case for many months now, most import lines were in very short supply. Stocks of Japanese nameplates totaled 148,139 units Nov. 1, a mere 24-day supply, compared with 149,259 a month earlier, a

Buick's new 'N'

Jim Dunne

Spy camera catches '85 Somerset Regal

Unofficial photo shows Buick Somerset Regal, one of three new front-drive N-body cars that General Motors will unveil for '85. The "N" will be available only as a two-door its first year and will also be sold by Pontiac and Oldsmobile. A four-door sedan is slated for '86, a body style which Cadillac may adopt in '87. The "N" is larger than the J-car, smaller than the X-car.

Imported-car torrent is expected by 1990

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Cars of import design either built overseas or in joint ventures here with U. S. makers will account for nearly 50 percent of the market by 1990, according to J. David Power, head of a market research firm that bears his name.

Power told the West Coast chapter of the International Motor Press Assn. that he expects a dramatic increase in import car sales once restraints are lifted.

"When the restraints are over, we expect to see a major flood of imports," he said. "We see it going to 35 to 40 percent nationally."

That figure takes into account cars that would be produced by the GM-Toyota joint venture in California.

"Ford and Chrysler will get into joint ventures as well, if the GM deal holds together, and will account for another 15 percent share," Power said. "We see a 50 percent share of import-designed products by 1990."

For 1984, Power sees all imports taking about 26 percent of the market, their success limited by the fourth year of restraints on Japanese cars and by improving domestic sales.

On the other hand he believes European imports will enjoy about a 10 to 15 percent increase in sales, although they

GM, Toyota hope for FTC approval by end of year

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Both General Motors and Toyota are now hopeful that the Federal Trade Commission will give them a go-ahead by year's end or earlier on the joint venture proposed for the old GM Fremont plant in central California.

But even with FTC approval — and that is not by any means certain — production would probably not start until 1986 models — a year later than originally anticipated.

Last week, FTC staff and Toyota reached agreement on how to handle very sensitive cost data without starting the 20-day clock to decision-day running under the Hart-Scott-Rodino Act. It may also limit circulation of the data and shelter it from the grasp of the Internal Revenue Service.

Toyota's concern was that allowing FTC to have the data (rather than to look at it in third-party hands) might expose it to the eyes of competitors and/or to tax investigators who want similar data to find out how the company sets the prices it uses when it sells products to its own subsidiary.

Currently, Toyota is in litigation with IRS over whether it owes taxes to the U. S. FTC's purpose, apparently, is to assess cost and profit from country to country (Japan vs. U. S.) and product to product (car vs. truck) to help find out the effect any temporary joint venture might have on Toyota's decision to start manufacturing facilities later in the U. S. on its own. A proposal of Toyota to spell out cost advantage of manufacturing in Japan in various categories was not acceptable to FTC.

Meanwhile, Toyota is barred from moving machinery into the Fremont plant. But GM is proceeding with its adjacent stamping plant, and the UAW is standing by with the assurance that if and when startup is announced, union members will be the "primary source of workers," although former Fremont workers will not be taken back on a seniority basis and work rules are expected to be negotiated.

The plan is to have Toyota manage the plant and produce some 200,000 cars per year to be sold through Chevy dealers.

• The joint venture would last up to 12 years. The board of directors would be chosen half by Toyota and half by General Motors. Parts sourcing would be half from the U. S. and half from Japan. U. S. employment at Fremont would be some 2,500 U. S. workers, partially trained in Japan. GM and Toyota made the announcement last March and hoped for FTC approval by July.

Meanwhile, both Chrysler and Ford have stated their opposition to the proposed joint venture — to the FTC, to lawmakers and to the press. They argue that a combination of GM and Toyota would eliminate competition in the small-car market, allowing GM to concentrate in the large-car segment, where GM already has two-thirds of the market.

Chrysler also believes the price of the new product would be set according to the effect on their own products — a kind of price fixing that would limit competition. Moreover, Chrysler believes, the joint venture would reduce separate R&D by the companies.

Chrysler has asked FTC

Week's total is 167,925; six-millionth-car built

Car production highest in 2½ years

By Mary Beth Mayer
Staff Writer

Estimates by the domestic auto makers made last week the best seven days of car production in 2½ years.

The manufacturers assembled the year's 6-millionth car last Friday (Nov. 18) and they targeted the week's total at 167,925 — the best for any week since 172,443 cars were completed the week ended May 16, 1981.

The week's total topped the previous week's output of 158,233 by 6.13 percent and was 75.48 percent ahead of the year-ago mark of 95,699.

Breakdown for the week by company was: General Motors, 58.10 percent; Ford Motor Co., 21.13 percent; Chrysler Corp., 14.77 percent; American Motors, 3.42 percent; Volkswagen of America, 1.54 percent, and Honda, 1.04 percent.

So far this year, there have been 6,014,942 cars completed, up 30.28 percent over the 4,617,

Table on Page 56.

103 finished at this time last year.

Twenty auto plants put in overtime last week.

Nine GM plants operated last Saturday (Nov. 19). Working two shifts that day were Arlington (Tex.), Detroit, Doraville (Ga.), Lansing (G-line), Lordstown (O.), Norwood (O.) and Oklahoma City. Fairfax (Kans.) and Linden (N. J.) worked one Saturday shift.

Ford had six facilities working extra daily hours. They were: Chicago, Edison (N. J.), Kansas City, Lorain (O.), St. Louis and Wayne (Mich.).

Chrysler's Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 points put in two daily 9-hour shifts last week, while its Jefferson (Detroit) plant worked two 8½-hour daily shifts and St. Louis No. 2 was on a one 10-hour shift schedule.

This week, Ford again plans daily overtime at the six plants which worked extra hours this week.

All car facilities will be idle this Thursday and Friday in observance of the Thanksgiving holiday.

Publicity called major effect of GM-FTC transmission pact

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The most important effect of the great hullabaloo raised over the proposed Federal Trade Commission settlement with General Motors over 21 million cars with potential transmission, diesel injector and camshaft problems is the guaranteed widespread publicity.

This will alert consumers who might have given up the battle or those whose cars have yet to develop problems, that they can still make their case.

In fact, if problems with GM engines and transmissions develop by 1991, they can still use the GM-Better Business Bureau arbitration.

Involved at minimum, under the 1980 FTC complaint now settled are:

1. The turbo-hydra-matic 200 automatic transmission, used in 5 million to 6 million cars made during model years 1976 through April 26 of this year but only in rear-drive cars and light trucks.

2. Camshafts or lifters in nearly 15 million 305-CID and 350-CID gasoline engines made from 1974 through April 26, 1983, in engines made by Chevrolet.

3. Fuel injector pumps or fuel injectors in some 500,000 350-CID diesel engines produced from 1978 through April 26, 1983, in engines made by Oldsmobile.

April 26 is the date of the tentative settlement made between GM and the FTC.

To no one's great surprise, the commission's vote was 3 to 1 with Commissioner Michael Pertschuk the lone dissenter, and he urged consumers to take full advantage of the mandated arbitration which he still feels is inferior to direct payments.

• FTC not only held a press conference in Washington, it also held them in regional offices to assure full press coverage. It produced full packets of materials and so did GM.

The settlement has its good points as well as its deficiencies. It will cost GM, according to estimates made by Commissioner George W. Douglas, at least $95 million, but it will probably mean higher prices for new cars in the future.

Moreover, the settlement allows the BBBs nationwide to mediate/arbitrate all engine and transmission problems for the next eight years as well as cases that go back to 1974 models and includes problems beyond the specific components here involved.

This makes it superior to an earlier settlement with Ford over "piston scuffing," etc., because that agreement boxed in consumers to three years/36,000 miles.

FTC also estimates that between 250,000 and 500,000 consumers may use the new BBB setup. Although this is far fewer than the 21 million vehicles potentially affected, it has meant that the GM program is now nationwide.

Since September, the arbitration decisions are non-binding for the consumer. In fact, the only consumers who cannot try again are those who went to BBB arbitration and lost between April and September and those who litigated and lost.

All others, including those that have had problems with GM diesel engines other than injectors and injector pumps, can also use the new system. Those who have problems not directly covered by the FTC-GM consent settlement must still own the vehicle.

The good side here is that if they have proof of repair bills on the components covered—transmission, camshafts, injector pumps, etc.—or if they can convince the arbitrator of the genuineness of their grievance, consumers can still try for reimbursement under the system.

Moreover, the work does not have to have been done at GM dealerships. These are points of considerable importance, especially since many consumers have been under the impression that no help would be forthcoming once the 5/50 warranty on the drivetrain expired.

• While Pertschuk and others would clearly prefer automatic redress instead of taking a chance with case-by-case arbitration, it is also true that GM is a litigator par excellence.

Commissioner Douglas said that getting GM to agree to direct redress might take until 1990 at least, with some cars then being almost 20 years old. That makes nonbinding arbitration look somewhat better.

Douglas also noted that redress would cover only specific components and problems in-

Corvette milestone

The 750,000th Corvette has been finished at General Motors' plant in Bowling Green, Ky. Doing the driving honors was Wayne Vollmar, right, the only employe who has worked on the car since its introduction in 1953. Also pictured is Joe Dell'Ario, who oversees production of the Corvette.

Nov. 1-10 is 17th straight period to gain in deliveries

U.S. new-car sales top '82 total

By Jenny L. King
Staff Writer

Early-November domestic new-car sales pushed the year-to-date total ahead of the sum for the entire 12 months of 1982 and marked the 17th consecutive period with a sales increase over year-ago numbers.

Through Nov. 10, dealers had delivered 5,843,480 new domestic cars, up 18.32 percent from 4,938,907 for the same portion of 1982 and ahead of the 1982 calendar year total of 5,756,660. Two years ago, sales through Nov. 10 were 5,559,127, putting the current year ahead of that as well.

Sales of 198,126 for the first November period this year were up 5.14 percent over the 188,441 written in the books in 1982. Although General Motors and Volkswagen failed to match their year-ago totals, their competitors' gains were enough to push the 10-day total ahead.

GM was off 3.44 percent, to 120,278 from 124,566. A year ago the corporation was involved in a low-interest financing program on carryover models which pumped up sales artificially for a two-month time span.

Ford Motor Co. reported sales of 47,982 new passenger cars, up 18.43 percent from 40,515. Chrysler Corp.'s 26.64-percent sales gain was the biggest of any domestic maker for the period. Chrysler sales climbed to 21,263 from 16,791.

American Motors reported estimated sales of 4,900, up 8.89 percent from 4,500. Volkswagen was down 19.43 percent, to 1,667 from 2,069, and Honda again surpassed VW, this time with sales of 2,036 new Accords.

GM earned 60.71 percent of the early November market, down from 66.10 percent in 1982. Ford has 24.22 percent, up from 21.50 percent. Chrysler rose to 10.73 percent from 8.91 percent. AMC went to 2.47 percent from 2.39 percent, VW slipped to 0.84 percent from 1.10 percent and Honda earned 1.03 percent of the recent period sales.

Domestic makes had a mixed bag of sales results. Plymouth was down 0.42 percent; Lincoln was down 20.61 percent; Buick was down 9.40 percent; AMC was down 35.71 percent, and VW was down 19.43 percent. Imperial sales no longer are reported by Chrysler Corp.

Makes coming up on the plus side included: Chrysler, up 60.09 percent; Dodge, up 29.85 percent; Ford, up 17.00 percent; Mercury, up 38.07 percent; Cadillac, up 18.15 percent to a record 11,165 from 9,450; Oldsmobile, up 2.50 percent; Pontiac, up 13.13 percent and Renault, up 29.03 percent.

The daily selling rate of 22,014 was up 5.14 percent from 20,938 last year. There were nine selling days both this year and last.

Annualized sales based on the Nov. 1-10 results were 7.49 million.

MacKenzie sees 10-15 pct. gain in '84 car market

CHICAGO. — New-car sales in 1984 should rise 10 to 15 percent over this year and total about 10.5 million cars, according to Gordon MacKenzie, general manager of Lincoln-Mercury.

Trucks will do even better, with a gain of 15 to 18 percent, he said.

For 1984, MacKenzie predicted that Ford Motor Co. would capture 18 percent of the car market and 31 percent of the truck market.

MacZenzie spoke at a press conference here.

Stretching the '84 Lincoln

American Custom Coachworks, Ltd., Beverly Hills, Calif., will build 600 '84 Lincoln St. Tropez extended-body limousines. The suggested list price is about $46,500.

Chevy seeks to avert 'gas guzzler' Corvette

By Roger Rowand
Engineering Editor

TROY, Mich. — Chevrolet Division is moving at wide-open throttle in its efforts to keep Corvette from wearing a gas-guzzler window sticker in the 1985 model year.

The techniques being used cover the waterfront. They range from even slipperier styling to reduced friction inside the engine.

"I don't want to minimize the fact we feel very strongly that we want to keep the car out of the gas guzzlers. In order to do that we will be looking at extraordinary means," said John Harlow Jr., staff engineer, Chevrolet Engineering.

His remarks came during a panel discussion at a seminar sponsored by the Aluminum Assn.'s Automotive and Truck Committee.

Among techniques being examined are an aluminum block or head and a smaller, more-fuel-efficient engine, Harlow indicated.

He ticked off a list of possible routes to further fuel economy. The list included additional materials substitution and aerodynamics with breakthroughts coming as General Motors develops technology in its relatively new wind tunnel in Warren, Mich.

Corvette's drag coefficient now is .341. Corvette for '84 gets 20.0 MPG. The guzzler tax starts at 19.5 MPG this year, goes to 21.0 in 1985 and then to 22.0 MPG in 1986.

James C. Davis, a design engineer with Chevy, said if it hadn't been for the push for fuel economy, the Corvette would not have been completely redesigned for 1984 as it was.

Harlow said consumer pressure for fuel economy has not been seen in the performance-car market as it has in other car fields where he expects that pressure to return.

"We've had what we consider a very positive experience with the aluminum used in the Corvette," he said. "There's been some fall-out in areas that were unexpected. For example, the parts look good. They have long-term durability. They look good after many miles and many years.

"People keep Corvettes much longer than the average car is kept. You want the body to last, and you want the chassis to last, too," he said.

Harlow emphasized that things done in the name of fuel economy are not necessarily detrimental to a car's sporty, fast image. Their costs, however, may have a negative effect, he said.

UAW, engineering group seeking members

2 unions eye Ford salaried workers

By Marjorie Sorge
Labor Editor

DEARBORN.—Salaried workers at Ford Motor Co., angered by recent cuts in medical benefits, are turning to unionization.

Both the UAW and the Society of Engineering Office Workers (SEOW) are trying to organize those employes and, according to both, interest is high.

"Interest has improved 1,000 percent," said Paul Zatyko, president of SEOW.

"(The cuts) have made it easier," he said. "We've been getting phone calls from different areas. The salaried workers are fed up with what's happening. (Donald E.) Petersen (Ford president) and (Philip) Caldwell (Ford chairman) and the other directors and officers of the company received increases in 1981, 1982 and I'm sure they are going to receive them in 1983. Then their bonuses will be reinstated next year.

"The reason they've had profits is because the salaried workforce, along with the hourly workforce, has been cut."

From 1980 to 1982, salaried workers at Ford took cuts in vacation time while cost-of-living-adjustments (COLA), the Stock Savings Investment Program (SSIP), the Annual Improvement Factor and merit increases were altered.

As the economic picture brightened, Ford was able to restore portions of those benefits, a spokesman said. In 1981, the merit-increase concept was restored although it was based on a percentage of the COLA increases made to salaried workers not eligible for merit raises.

Beginning Jan. 1, 1984, the SSIP will be restored but at a lower rate. Ford used to contribute 60 cents for each dollar saved up to 10 percent of pay. Now it will pay 60 cents for every dollar saved up to 5 percent of base salary.

• In addition, a profit-sharing plan was instituted in 1982 and a payment is anticipated for the 1983 calendar year. Also, a tax efficient savings plan was added to the SSIP in 1982 and a salaried income security program was instituted that same year. It is similar to the Guaranteed Income Stream (GIS) negotiated for hourly workers in which long-term employes who are laid-off have a percentage of their income protected.

The annual raise and the vacation days were not restored.

According to Perspective, SEOW's newsletter, Petersen received a $3,200 monthly increase in 1981.

Ford would not confirm the increase but emphasized that merit increases were frozen in 1980 and then partially restored in 1981.

Earlier this year, the 56,000 auto-related salaried workers were notified of cuts in their medical benefits. As of Jan. 1, 1984, the Basic Supplemental and Extended Benefits Plan will be replaced by a Comprehensive Medical plan which has a $250 family deductible and a copay of 80 percent for the first $750 spent. In the past, there was no deductible and no copay.

However, under the old program there was a $100 deductible for doctor visits that has been eliminated but workers must now co-pay 80 percent with no ceiling.

Dental coverage has been changed from a 90 percent copay to a 70 percent co-pay.

"There was little interest in organizing 2½ years ago because people expected to take cuts when the company was losing money," Zatyko said. "People were surprised when they found out that our officers and directors were still receiving merit increases."

SEOW said it has already organized between 960 and 970 salaried workers at eight Ford locations: Rouge Steel, Central labs, Dearborn stamping, Dearborn glass, Dearborn engine, Romeo tractor, Utica trim, and Mt. Clemens paint. According to Zatyko, SEOW's strength is basically in the Detroit area although it is trying to expand into other states with Ford plants.

• The union recently lost an election for model designers at the design center. According to Zatyko, the election was lost because some former SEOW members bad-mouthed the union. He said those people were members in the early 1970s when the union had some internal problems and a lack of communication with its members.

But, he said, SEOW intends to try to organize the designers next year. Under National Labor Relations Board rules, a union must wait one year before attempting to organize again.

An election will also be held Dec. 15 for 30 employes in the microfilm and standards area to vote on joining SEOW.

That union has also petitioned the NLRB for an election, hoping to represent 76 salaried workers at Livonia transmission.

The UAW is also attempting to organize the salaried workers at Ford Motor Co. but a union spokesman said the UAW would not comment on its organizing drive.

"We got out in front a couple of years ago (when the UAW tried to organize salaried workers at General Motors) and got into trouble," he said. "We don't want that to happen again."

The UAW lost elections for salaried workers at GM in Flint, Pontiac, Ohio and other locations in 1982.

The UAW spokesman said he sees no jurisdictional problems with the SEOW since the SEOW is not part of the AFL-CIO, which prohibits sister unions from treading on each other's organizational turf.

The UAW has a small unit of medical personnel organized at Ford, a spokesman said.

The UAW and the SEOW were on the ballot together last year when the 160 members of the Fraternity of Laboratory Workers voted on whether to remain a separate union or join the UAW or the SEOW. The SEOW won, Zatyko said.

Chrysler regains 80 cars, trucks

QUAKERTOWN, Pa.—Chrysler Corp. was given approval by Bucks County Court Judge Kenneth G. Biehn to repossess 80 cars and trucks from Quakertown Dodge.

The manufacturer charged that the dealership owed Chrysler Corp. more than $736,000 for the vehicles.

Attorneys for the auto maker charged in court documents that since at least Aug. 24, 1982, Quakertown Dodge has been selling cars bought on credit, but not repaying the loans. Chrysler also said Quakertown Dodge owes at least three months' back rent for its showrooms and $110,000 in state and federal taxes.

274,570 new cars shipped by Japan during month

TOKYO. — Japan exported 274,570 new cars in August, according to figures compiled by the Japan Automobile Manufacturers Assn.

The U. S. was by far the leading destination, with 125,066.

Following were West Germany, 16,564; UK, 13,397; Canada, 13,090; Australia, 12,366; Malaysia, 9,014; Saudi Arabia, 6,633; the Netherlands, 6,514, and Austria, 5,307.

Next came New Zealand, 4,653; France, 4,500; Belgium, 4,497; Finland, 4,253; Switzerland, 3,891; Puerto Rico, 3,263; Denmark, 3,214; Sweden, 2,695, and Singapore, 2,602.

Record crowd at South Florida show

The 13th South Florida Auto Show attracted a record number of visitors. Gerald Ray, show chairman, said that 407,214 people attended the 9-day auto exhibition in the Miami Beach Convention Center. He said that the show featured $88 million worth of autos and accessories.

Ford hikes incentives; Nissan pushes trucks

By Joseph Bohn
Marketing Editor

Nissan Motor is continuing to hammer away at the truck market with new incentives, while Ford Division has upped the ante on Thunderbird, Escort, Tempo and trucks.

The first of four Ford programs, "Holiday Happiness," runs from Nov. 11 to Dec. 31. It offers incentives to sales managers on Thunderbirds.

Ford is putting $25 per new '83/'84 Thunderbird sold into a pot. Managers compete head to head for the cash. Half of all the sales managers in each district — those with the highest sales in relation to objective — get the money.

Thus, if one district has 40 sales managers, the 20 highest would divide the money generated by their total district's sales.

Ford's other three programs also run from Nov. 11 to Dec. 31.

A salesperson incentive on '83/'84 Escorts and '84 Tempos provides a so-called "Holiday Rub-off" ticket for each vehicle sold during the period.

Salespeople win one of six levels of cash. Depending on what their ticket shows, they can win $25, $50, $100, $200, $500 or $750.

• Additionally, they receive an extra ticket for each sale of a manual transmission Tempo.

Under this program, they can also elect merchandise in lieu of cash.

A third program, "Ranger Revelry," provides a $75 bank draft to salespeople for the sale of each new and unused '83/'84 Ranger pickup.

Finally, Ford extended and enhanced a Super Bowl contest. It covers all light and medium-duty trucks through the 800 series, excluding Econoline vans and B-series trucks.

The program, originally slated to end Oct. 31, was first extended to Nov. 10 and is now further extended to Dec. 31.

It has been modified so that dealers who don't win Super Bowl trips, but hit 135 percent of their objectives by Dec. 31, earn $500 cash, if they are a smaller dealer and $1,000 cash, if they are a big dealer.

Only those who don't win trips are eligible for the cash.

Nissan's two programs are both geared to truck sales.

The first is called "Aim for Spain." It runs from Nov. 15 to March 2. Sales managers can win a seven-day, six-night trip for two to Madrid. Objectives are based on sales of all new and unused Nissan trucks.

Managers of large dealerships compete against a set truck objective for their trips, while managers of small dealerships compete in grouped competition. The highest-over-objective in each group gets the trip.

There's also a wild-card drawing. Managers in grouped competition — one in each region — who lost out originally get a second chance to win the trip if they hit 100 percent of objective.

Nissan also has an "Aim for Cash" salespersons' incentive that runs from Nov. 15 to Jan. 4. It covers all Nissan trucks.

Salespeople earn $50 for every new '83/'84 truck they sell, with no qualifiers. In a second phase of this program, following a one-unit qualifier, they can earn a mystery bonus award of either $25, $100, $500 or $1,000 for every unit they sell.

The dollar amounts are based on a randomly selected computer drawing.

Hard times mean less money for charitable organizations

How Big Three goes about giving away millions

By Kathleen Hamilton
Financial Editor

The pain caused by the prolonged auto slump has been photographed in the food-stamp lines of the Midwest, reported in layoff statistics issued weekly by the makers and seen in the faces of pensioners who came to the companies' annual meetings to ask when dividend checks would be resumed.

The impact was felt in a more subtle, less-publicized way, as well: Reductions totaling millions of dollars in corporate gifts to charitable organizations, many of which help the same people displaced by the auto industry.

The length of the most recent downturn, in fact, severely drained the coffers of two of the Big Three charitable funds.

The upturn at Chrysler Corp. has come too late to avoid a difficult decision: Will it make a contribution to its non-profit Chrysler Corp. Fund within the next 18 months despite the unlikelihood of gaining a tax credit for the good deed?

Chrysler won't be paying taxes, after all, for about that time period because of all its tax credits from previous losses.

The Chrysler Fund had only $2.04 million at midyear, after giving away $1.8 million in 1982. Planned donations for 1983 are at about the same level as in 1982, said Michael M. Glusac, Chrysler director of government affairs who doubles as head of the Chrysler Corp. Fund.

At one point in the mid-1970s, the Chrysler Fund had accumulated about $9 million, Glusac said.

But then, the whole idea of corporate funds is to stash away

But he says it should have a different name

Iacocca backs plan on industrial policy

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Chrysler Chairman Lee Iacocca gave implicit approval to a Senate Democratic strategy on industrial policy last week, but he said the term should be avoided in favor of a label that does not conjure up a "Russian five-year plan."

Senate task-force head Sen. Edward Kennedy, Massachusetts Democrat, agreed, saying, "We are opposed to a Central Planning Organization or a Central Planning Agency."

The 30-page report, Jobs for the Future; A Democratic Agenda, was released last week. It has been adopted by the Senate Democratic Caucus and, like a similar House proposal, has been referred to as campaign material for the 1984 election.

The principal feature of the Senate plan is the creation of a "Council on Economic Competitiveness and Cooperation."

The 20-member body would be a permanent, independent agency attached to the executive branch. Membership would be drawn from government, business, labor and the public. The council would have advisory powers only, backed by sub-group findings on specific industrial sectors.

The Senate Democrats failed to include the creation of an industrial competitiveness bank, as called for in a similar House proposal. But the Senators asked for a study of such a bank. Task force members said they felt the bank proposal might have torpedoed the entire program had it been included.

• The report also calls for the clarification of antitrust laws to encourage joint research and development, a permanent research and development tax credit and federal support for state development finance agencies.

It advocates tying import relief to a privately-developed adjustment plan, speeding up findings on injury from unfair trade practices and broadening the framework for international negotiations on trade.

Iacocca was present at last week's press conference introducing the plan. He later said America is in need of a coalition of business, government, and labor and "this is a good primer on how to do it."

Iacocca also repeated warnings that his company will close its Belvidere (Ill.) assembly plant if the FTC allows the General Motors-Toyota joint venture. He said he might "buy a bank" instead. Iacocca has often complained that more money can be made in the "paper-economy" than by actually producing hard goods.

Iacocca said he would consider "recasting the company and becoming a merger guy" if better protection against foreign-car imports was not forthcoming from the Federal Government.

Clenet equipment to be auctioned

GOLETA, Calif. — The in-process inventory and machinery of bankrupt neoclassic-car maker Clenet Coachworks will be auctioned Thursday, Dec. 1, at the former plant here.

An estimated $300,000 to $400,000 worth of Clenet body panels, partially completed cars, Ford drivetrain components, Volkswagen body parts, a paint booth, woodworking equipment and other equipment and parts will be auctioned, said Steve Quale, vice president of Tauber-Arons Auctioneers, Los Angeles.

The plant is available for sale or lease. Plant and equipment are owned by S. Prestley Blake, who was partner to Alain Clenet in the low-volume neoclassic luxury-car venture.

New face, gearing for Peugeot 505 STI

The STI model, like all 1984 Peugeot 505s, features new front-end styling with inset quad headlamps. Manual transmission gasoline engine models have a 4.11 differential for improved performance. Peugeot's turbocharged diesel engine is a new STI option. It has a fuel-filter heater, as well as other cold-start improvements. All '84 Peugeot 505s have new electrically controlled and heated outside mirrors and new driver-controlled rear-window lockouts.

News roundup

Toyota production sets record

TOKYO.—Toyota Motor Corp. produced 286,495 units in September, up 3.9 percent from the year-ago month, and the all-time high for September, the company said. Passenger-car production was 212,972, up 6 percent, and truck and bus output was 73,523, down 1.7 percent. Toyota exported 134,006 units in September, up 3.9 percent, and the first time in seven months that exports exceeded the year-ago month. Exports of passenger cars were 95,337 units, up 14.2 percent.

Auto plants running nearer capacity

WASHINGTON.—Auto makers operated their plants at a seasonally adjusted 80.5 percent of capacity in September, the Federal Reserve System reported. That was the highest rate for the year and up substantially from the 55.9-percent rate of September, 1982.

Auto credit growth slows; interest rates rise

WASHINGTON.—Auto credit in September expanded at an annual rate of less than 3 percent after two months of annualized growth of more than 20 percent, according to Federal Reserve Board statistics. The average new-car loan at auto makers' captive finance companies was 13.62 percent for 46.2 months on $8,792, compared with August's 12.77 percent for 45.9 months on $8,724. Used-car rates declined from 18.25 percent to 18.21 percent on the average 38-month loan.

Domestics up 23 pct.; imports climb 4 pct.

Month's registrations top '82 total

By Jenny L. King
Staff Writer

New-car registrations in the U. S. in September were down from the preceding month by some 38,000 units, or 4.94 percent, but the most recent total surpassed its 1982 counterpart by 17.69 percent as the numbers of domestics and imports climbed.

Figures compiled by R. L. Polk & Co. reveal September new-car registrations of 735,167 this year compared with 624,640 in 1982. This year's August registrations numbered 773,362.

Of the total, 528,420 were domestics this September, up slightly from 527,282 in the preceding month and up 23.71 percent from 427,132 a year ago.

Import registrations were up in number, down in market penetration. The September import sum of 206,747 was 4.68 percent above 197,508 last year and represented 28.12 percent of the total market for the month, compared with 31.62 percent in 1982.

The imports' market-share loss was rather evenly distributed among the major U. S. makers in September. General Motors picked up 0.63 percentage points, Ford Motor Co. was up 1.58 percentage points, Chrysler Corp. was up 0.71 percentage points and American Motors increased its holding by 0.60 percentage points. Miscellaneous domestics shriveled to 0.01 percent from 0.03 percent.

• Of the domestics alone, AMC earned 3.42 percent of the market, Chrysler cornered 11.80 percent, Ford had 24.30 percent, GM captured 60.47 percent and miscellaneous makes accounted for 0.01 percent.

Compared with the August ranking of domestic makes, AMC enjoyed a boost from 12th to 10th place, Chrysler went to

Table on Page 36.

ninth from 10th, Plymouth dropped from ninth into 11th and Lincoln replaced AMC in 12th. AMC registrations include Renault products built in the U. S.

The year-ago domestic breakout included AMC with 2.71 percent of the total, Chrysler with 11.38 percent, Ford with 23.24 percent, GM with 62.63 percent and miscellaneous domestics with 0.04 percent.

In market class, imports continued to account for the largest segment, 28.12 percent, followed closely by U. S. intermediates at 27.88 percent, then compacts at 15.59 percent, standards at 11.99 percent, subcompacts at 10.36 percent and luxury models at 6.06 percent.

Excluding imports, intermediates had 38.78 percent of the market, compacts had 21.69 percent, standards had 16.69 percent, subcompacts had 14.41 percent and luxury cars had 8.43 percent.

The September, 1982, market class breakdown was as follows: Imports at 31.62 percent, intermedites at 19.96 percent, compacts at 16.37 percent, standards at 10.62 percent, subcompacts at 16.42 percent and luxury models at 5.01 percent.

• New-car registrations for the first nine months of 1983 were up 15.91 percent from 1982 and were off from the 1981 level by a scant 0.12 percent. Total for the period was 6,556,402 in 1983; 5,656,444 in 1982, and 6,564,329 in 1981.

Domestic registrations for nine months were up 18.72 percent, to 4,703,192 from 3,961,614. Compared with 1981, they were up 0.74 percent, from 4,668,568 two years ago. Imports were up

Ford forecasts 1983 foreign sales of 17 million

DETROIT.—Ford Motor Co. expects to sell 17 million cars outside the U. S. and Canada this year and to take a lead of 20,000 over General Motors in the Australian car market, said Robert A. Lutz, executive vice president-Ford International Automotive Operations. There are no plans to bring the Toyo-Kogyo-based Mexican Telstar into the U. S., he said.

Piech joins Art Center board

PASADENA, Calif.—Dr. Ferdinand Piech, vice chairman of Audi, has joined the executive board of the Art Center College of Design. Piech has an open-ended term on the board, which is nongoverning. Members serve as advocates for the college.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

But Justice official asks changes to protect trademark challenges

Anti-counterfeiting bill endorsed

WASHINGTON. — Courts could combat product counterfeiting much more effectively with the aid of a new bill, Timothy J. Finn, of the Justice Department, told the House Subcommittee on Crime.

Yet changes must be made in the bill if manufacturers who make legitimate challenges to others' trademarks are not to be threatened with severe criminal and civil penalties, said Finn, associate deputy attorney general.

H.R. 2447 — which is supported by a coalition of companies and trade groups, including the Motor & Equipment Manufacturers Assn. — would greatly extend both the civil and the criminal penalties provided under current federal anticounterfeiting law, Finn said.

"We are persuaded by the apparent proliferation of counterfeit merchandise, and the present remedies . . . are not sufficient to deal with the problem," he added.

The mandatory treble damages under H.R. 2447 "are appropriate for the intentional, criminal counterfeiting which this bill intends to address," Finn said. Furthermore, the bill would extend the courts' powers to dispose of counterfeit goods and prevent trading in them.

Nevertheless, the Justice Department is concerned that these penalties could boomerang against innocent persons or corporations who make "good faith challenges" to registered trademarks.

Under federal law, using another's trademark is not necessarily illegal.

"For example, when a trademarked name becomes so identified with a particular kind of product . . . so that consumers cease to think of that trademark name as anything but the product name regardless of who makes it, the trademarked name may have become generic" and open to legitimate challenge in the courts, Finn said.

• If the penalties under H.R. 2447 were to prevent such challenges, it might have adverse effects on antitrust efforts, the Justice Department fears.

To solve this problem, Finn recommended that the word "willfully," meaning in legal terms "to act with evil motives," should be used in the bill to describe the criminal intent element of counterfeiting.

In addition, the bill should exempt from prosecution all those who give trademark owners adequate advance notice, giving the owners a chance to seek civil restraints, and who label their goods to distinguish them from the goods of the owners.

In the case of an ex parte seizure of goods, the bill should allow the government to be notified and give its own opinion of the action, to ensure that such seizures do not interfere with criminal investigations, Finn said.

Subcommittee Chairman William J. Hughes, New Jersey Democrat, while sympathetic to the bill's goals, was dubious that the Justice Department would have either sufficient interest or sufficient resources to enforce the law efficiently.

"How realistic is it to think that government attorneys would be interested in prosecuting product counterfeiters when there are so many drug dealers and gangsters?" Hughes asked Finn.

"Even a few prosecutions in a white-collar area like this would be an effective deterrent," Finn answered.

Nashville auction prospers under British ownership

NASHVILLE. — During its first year as an Anglo American outlet, Nashville Auto Auction's sales increased 20 percent — from $83 million to $100 million. According to Anglo American, this is close to its projection when it purchased NAA for $4 million a year and a half ago.

Anglo American Auto Auctions, Inc., the U.S. holding company for the British Car Auction Group, now has six North American locations. Nashville was its first U.S. acquisition.

The others are Metro Auto Auction of Kansas City; Minneapolis Northstar Auto Auction; Omaha Auto Auction; Aptco Auto Auction, Taylor, Mich., and Dallas Auto Auction.

Together, the six auctions are expected to gross $650 million this year and perhaps as much as $1 billion in 1984, said David A. Wickins, BCA chairman based in Farnham, England.

Michael Richardson, BCA deputy director, directs Anglo American's operations on this side of the Atlantic from offices in Nashville. The Nashville outlet brings nearly 1,000 cars to the block at its regular Wednesday auction at the 33-acre complex.

Among its services, NAA provides a courtesy shuttle from the Nashville airport to the auction and breakfast also is available on auction day.

NAA recently sponsored the Tennessee Automobile Dealers Assn. convention and invited the group to meet at the auction site.

Auctions in England differ from those in the U.S. mostly in terms of their sources for cars.

Richardson said that in England about 78 percent of all new cars are sold to companies. These cars later are disposed of by auctions which BCA runs for most of the companies, the government and the manufacturers. Sales are made both to dealers and to the public in England.

Raleigh dealers concerned about sign ordinance

RALEIGH, N. C.—Automobile dealers here are concerned that the City Council will require that on-premises signs larger than 150 square feet be taken down after a 5½-year amortization period without compensation to the owners.

The dealers are worried that the City Council will take this action as an amendment to an ordinance prohibiting issuing permits for the erection of such signs.

The ordinance was not directed specifically at auto dealership signs. It is part of a similar rule which rejects permits for erecting the same size off-premises signs.

Val Eff, sales manager of North State Ford Truck Sales, said that replacing a large nonconforming sign in front of his business woud cost about $60,000. He said the sign itself is worth $43,923 and that replacing it with a new and smaller sign would cost another $15,867.

C. E. (Buddy) Moore, controller for Leith, Inc., which has both Lincoln-Mercury and American Motors franchises, said the provision of the new ordinance limiting businesses to one free-standing on-premises sign could hurt dealerships.

AC-Delco honors Allied

Ted Aprill, right, president of Allied, Inc., a parts distributor in Ann Arbor, Mich., received a plaque commemorating his firm's long-standing business association with AC-Delco, which dates back to 1918. The plaque was presented by AC-Delco Detroit officials Tom Lang, left, sales manager, East, and Gene Jambor, zone sales manager, second from right. Also present for the occasion was Bill Glesnor, Allied warehouse manager.

Rate of increase double that of overall market

Japanese to top million in Europe

By Richard Feast
European Editor

LONDON. — The level of Japanese new-car registrations in Europe has never been higher.

Their rate of increase is double that for the overall market, and a year-end total well in excess of one million units looks certain.

Unofficial industry statistics indicate that during the first three-quarters of this year the number of Japanese registrations increased by 11.4 percent to almost 830,000, a market share of 10.2 percent. The total market was 8,136,500.

Last year, Japan had 9.5 percent of the European market, compared with 9.6 the previous year and 9.8 in 1980. In the peak sales year (1979) the figure was less than 7.5 percent.

This year's market is expected to reach or beat 1979's record 10.33 million.

With a handful of exceptions, Japan's share of the available business in the various national markets improved, whether the buying trend was up or down.

In unit terms the additional success by the combined Japanese makers amounted to approximately 84,900.

The key gains were in West Germany, Austria, Holland, UK and Denmark.

Such changes have an immediate effect on the European producers, most notably Germany's. In addition to its important domestic market, its role has traditionally been that of prime exporter to Northern European markets.

French and Italian manufacturers, protected at home by trade barriers, were less affected by these recent changes.

But over the medium and longer term, if the Japanese hang on to their increased business, it is bound to cause substantial European reactions.

Already the low-cost competitiveness of the Japanese has caused restrictions of various types to be established in most major national markets. The prime examples are France's 3 percent and Italy's 2,200 units per year.

To compete with Japan's cost advantages, Ford is to sell Brazilian-built Escorts in Scandinavian markets. This follows Fiat Auto's decision to source 127 models — and later Unos — from Brazil for sale in Europe.

Now Volkswagen do Brasil has revealed that from 1985 it is likely to dispatch in volume an unspecified new model for sale across the whole of Europe. A firm decision on the $800-million project is expected by the end of this year.

A further reaction which Japanese competition has caused in Europe is the number of production or financial links between makers: Austin Rover with Honda, Nissan with Alfa Romeo, Motor Iberica and VW, and Nuova Innocenti of Italy with Daihatsu in the supply of power trains.

• Japanese unit increases in the nine months to the end of September were led by West Germany. The market was well up (more than 13 percent) but Japanese registrations increased by nearly 21 percent to 196,700 — an additional 33,600.

In Austria, Japan kept ahead of the 24 percent overall market increase. It sold an additional 17,700 units (43 percent) for a total of 59,100.

Holland, Japan's third most important market on the continent, bought an additional 17,200 units compared with the similar period last year. That was a 25-percent improvement against a market swing overall of 15 percent. Total Japanese registrations for the nine months: 87,800.

In the UK, where the Japanese number gain was 13,200, the picture was different. The Japanese lost market share — thanks to an incredibly competitive market place which saw Ford, BL, Vauxhall and importers slugging it out with a major discount war.

Thus, Japan's UK increase was only 9.6 percent (to 151,800) compared with an overall 17.7-percent swing. The UK market is set fair to beat the record total of 1979, when 1.72 million cars were registered.

The most dramatic gain by the Japanese was in the small, Danish market. Overall car business rose by 27 percent, but Japan's registrations leapt by 66 percent to 28,900 — 11,500 units more than in the year-earlier period.

JAPAN'S EUROPEAN ADVANCE

Based on January-September registrations

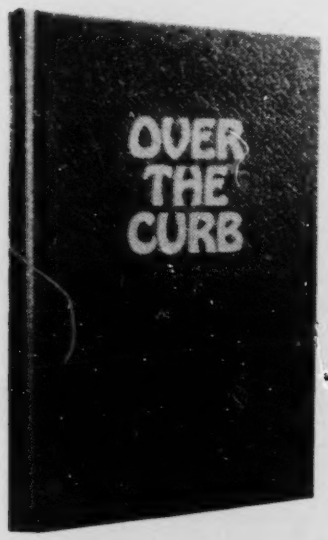
Hoffman building in Hartford suburb

WEST SIMSBURY, Conn. — Hoffman Enterprises is building an Auto Park in this fast-growing Hartford suburb.

It will include showroom and service facilities for Honda, Lincoln - Mercury, Oldsmobile, BMW, Rolls Royce, Maserati and Alfa Romeo.

Trauax appointed

HILLSBORO, Ore. — Edward E. Truax has been named field sales manager for Porsche Audi Northwest, distributor for Oregon, Washington, Idaho, Montana and Alaska.



STILL #1

"Over The Curb", a sales and closing guide written exclusively for automobile salespeople, was first introduced in 1973. It soon became the best-selling book of it's type in the industry. Even though "Over The Curb" has not been nationally advertised since 1977, it still remains #1. Order today and see why.

From a Dealer in Chicago, Ill.
"Fantastic! After reading just the first few pages, it's easy to see what's made 'Over The Curb' #1!"

From a Dealer in Montreal, Canada
"I recently attended a dealer meeting in which 'Over The Curb' was discussed with great enthusiasm by those familiar with it. I've been asked by the dealer body to order 100 more copies..."

From a Dealer in Seattle, Wash.
"I wish your book was available when I first went on the line 32 years ago. Truly a must for any person in any position of retail auto sales. Enclosed is our check for 14 more copies..."

From a Dealer in Phoenix, Ariz.
"Someone finally did it! Produced a powerful closing guide which is as entertaining and enjoyable to read as any book on the shelf! Please send me 12 more copies..."

From a General Manager in Los Angeles, CA.
"Congratulations on such a fine book. I have made it required reading in our store. I believe readers are leaders. Please accept our order for 24 additional copies..."

"Go back and get another $1200."

1 copy	$17.50
2-3 copies	14.50 ea
4-9 copies	12.50 ea
10 or more	10.75 ea

A great Christmas gift for your sales staff! Greg Hill will personally autograph your copies on request. Please include desired names with your order.

May lower local content in new models

Peru seeks to bolster auto industry

By Caitlin Randall
Special Correspondent

LIMA, Peru. — In an effort to bolster its sagging automobile assembly industry, the Peruvian Government has proposed a new law to spark interest at Ford Motor Co. and General Motors, whose Lima plants have gone unused for nearly 13 years.

The law, now in debate in Peru's two-house Congress, would require that local assemblers use a minimum of 31 percent local content until the end of next year. This would increase to 34 percent on Jan. 1, 1985.

However, companies which start assembly on a model not already manufactured in Peru would be allowed to begin assembly with only 25 percent locally made parts.

Under the present law, assemblers must use 30 percent local content for cars and 35 percent for pickup trucks. Both were to have increased by five points in 1984, and companies were to have reached 50 percent local content over the next two years.

"Lower local input is better for assemblers," said one industry source. "It's cheaper for us to import parts than to buy them locally.

"It's not good for auto makers, but the (Congressional) committee seems to have convinced them it will attract new assembly plants and more customers."

Representatives of AIPA, the automobile assemblers association, said the government is anxious to encourage new assembly plants, particularly Ford and GM.

• Some industrialists, however, say the government proposal favors GM and Ford at the expense of other auto companies.

Others, like Rafael Zegarra of Volvo, say it is unlikely that auto manufacturers would invest in local assembly at this stage, regardless of government efforts.

"The economy is the major deterrent," Zegarra said. "With inflation running at over 100 percent and every auto plant in Lima cutting production, I can't imagine who would invest in this market."

Indeed, auto assemblers predict production for 1983 will fall below 10,000 units, down 54.50 percent from 21,977 in 1982. Imports as well are expected to drop 45.71 percent from 27,629 in 1982 and 15,000 units this year.

But, as industry sources point out, imports continue to outsell local models, further straining the assembly industry.

"There is a lot of competition from imported vehicles because of high stock worldwide," explained one dealer. "There are 10 auto companies in Japan, for example, which all export to Peru."

While duties are high — as much as 127 percent of the base value of an automobile and 70 percent of the value of a truck — assemblers say taxes on locally manufactured vehicles are prohibitive as well.

According to dealers, there is only a 10 percent difference in price between a *locally built* light truck and an imported truck because of high local taxes.

• "It's not that duties are low," said one dealer, "but that taxes on local vehicles are simply too high."

Feeling the pinch, Volvo has stopped production at its Lima plant.

Last year, Volvo assembled 430 heavy trucks and buses compared with 1,270 units in 1981. So far this year, the company has assembled 13 units.

Company sources said, however, that Volvo hopes to start assembling 300 buses for Lima transport within the next three months.

Other companies, including Toyota and Motor Peru, which assembles Volkswagen cars and pickups here. are also reducing production while Nissan Motor halted production altogether last March.

Meanwhile, the government has hiked the cost of imported CKD kits through a series of new tariff regulations.

The new rules increase the surcharge on imports from 15 percent of the customs tariff importers must pay to an across-the-board 10 percent of the CIF (cost insurance freight) value of the goods.

Assemblers said this means that surcharges on items paying low duties, mainly inputs for industry, will jump in cost far more sharply than those on manufactured goods which pay higher duties.

Dealer coaches football team to championship

SHOW LOW, Ariz. — Always a doormat for other football teams, Show Low High School got a shot in the arm this year when Gene Hall, a local auto dealer helped coach the team to a 7-2 season and a Class A East championship.

The school had never produced a winning team in its 11-year history and the Cougars had won just one game a year ago and only four in the past three years.

Hall was a volunteer part-time football coach, along with George Kunz, a volunteer and a former NFL All-Pro lineman.

On deal with Toyota

GM seeks FTC OK by year-end

Continued from Page 1

Chairman James C. Miller III to excuse himself from voting on staff recommendations on the GM-Toyota proposal since Miller (as a private consultant before coming to the FTC) received fees from GM for advice on a compliance matter in workplace safety.

FTC general counsel has written to Joseph A. Califano, former Cabinet officer in the Carter Administration and currently a lobbyist for Chrysler in the GM-Toyota affair, saying there is no legal basis for Miller to excuse himself.

But it turns out that GM had used Miller on six separate occasions in matters pending before the Occupational Safety and Health Administration and the total payments were $75,107.67. Miller developed alternate means of compliance and their cost/benefit ratios.

An early story in AUTOMOTIVE NEWS had used $5,000 (based on a paper obtained under a Freedom of Information request); later, the figure of $50,000 was used; but FTC left unconnected both figures. Now, John B. Carley, FTC general counsel, says, "The facts are not in dispute and, as stated, have been a matter of public record for more than two years."

When asked about the $50,000 payments from GM on an earlier occasion, a GM spokesman pooh-poohed the amount (but did not correct it, by saying that at $1,500 a day, the consultancy was not much).

The letter responding to Chrysler's lobbyist notes that Miller was a fulltime employe of the American Enterprise Institute while running a Subchapter S corporation as a consultant and the fees from GM did not constitute a majority of its two-year income because there were "numerous clients" besides GM. Besides, it adds, Miller worked exclusively with accountants, engineers and economists for GM and on no occasion with company officials.

Carley's letter also stressed that Miller has no financial interest in GM and he is clear of even the appearance of conflict. As a compelling point, Carley notes that despite a history of stormy disagreement with Chairman Miller, former FTC Chairman Michael Perschuk (now commissioner) has no doubt about Miller's "impartiality and independence" in the GM-Toyota joint venture decision.

• The status of GM-Toyota now is that FTC attorneys and economists are analyzing the proposed joint venture to see if it violates the antitrust laws. When they finish, they will forward their recommendations to the commissioners.

They may accept or reject staff views or may modify the proposal. Theoretically, FTC could suggest changes to GM and Toyota to bring the proposal into compliance. If GM and Toyota went ahead without FTC approval, the FTC could go to court.

If FTC allows the proposal to proceed, then Ford and/or Chrysler could file a private antitrust suit challenging the joint venture.

A Whisper from Denmark

The Hope Whisper is made by Hope Automobil Industri, Hadund, Denmark. The new electric car runs up to 62.5 miles per charge, according to the company. The aerodynamic fiberglass body features built-in headlights, three doors and room for two adults and two children. The Danish vehicle is now going into mass production.

Inventory of import cars shrinks to 29-day supply

Continued from Page 1

28-day stock at September's lower sales pace.

Japanese makes and their Nov. 1 days-supply figures were: Toyota, 12; Honda, 22; Nissan, 23; Mazda, 24; Subaru, 34; Mitsubishi, 55, and Isuzu, 70. In addition, Chrysler Corp. had a 67-day supply of Mitsubishi-built cars, including Plymouth Colt, 67; Dodge Colt, 68; Plymouth Conquest, 68; Dodge Conquest, 78; Plymouth Vista, 55, and Dodge Vista, 61.

West German-made cars in stock Nov. 1 totaled 41,063 units, a 52-day supply, up from 29,340 Oct. 1, a 37-day stock.

German nameplates and their Nov. 1 days-supply figures were: Mercedes-Benz, 26; Porsche, 31; Audi, 37; BMW, 58, and Volkswagen, 87. VWoA also had a 68-day supply of U. S.-built Rabbits.

Days-supply of other European lines Nov. 1 were: Jaguar, 15; Saab, 31; Volvo, 46; Peugeot, 53; Alfa Romeo, 114, and Renault, 119.

Days-supply figures for imported pickup trucks Nov. 1 were: Mazda, 26; Toyota, 52; Nissan, 67½; Chrysler Corp./Mitsubishi, 68; Mitsubishi, 75, and Isuzu, 89.

October retail truck sales move sharply ahead of '82

Continued from Page 14

Nissan shortages, sales of the non-captive Japanese-built pickups dropped 8.2 percent in October to 28,006 units, compared with 30,501 a year ago. However, the 10-month total was up 36.7 percent, from 251,485 units in 1982 to 343,714.

In October, 54,373 domestic compact trucks were retailed, accounting for 63.1 percent of the month's total. A year ago, the imported vehicles took 59.3 percent of the count with 38,170 units.

For the 10-month span, sales of the domestic compacts totaled 524,602 units and accounted for 57.2 percent of the market. A year ago, the domestics had 47.3 percent with 298,590 units.

Although the imports' share of the market through October dropped to 42.8 percent, the unit total was higher than a year ago. Sales this year hit 392,326 units, up 17.8 percent over the year-earlier 333,238. In 1982, the imports had 52.7 percent of the market.

On Nov. 1, according to the Motor Vehicle Manufacturers Assn., there were 571,404 unsold new trucks in dealers' hands, 7 percent lower than the 613,912 units in inventory a year ago.

Stocks were lower this year in all three market segments, with big trucks showing the biggest percentage declines.

• There were 536,433 light trucks on hand at the end of the month, down 6.1 percent from last year's 571,378. Mediums were down 15.7 percent, from 9,685 units a year ago to 8,164. Heavies totaled 26,807 units, off 18.4 percent from the year-earlier 32,849.

Big Three truck dealers retailed 218,960 units in October, a gain of 58.9 percent from last year's 137,980. Through October, the count was 2,055,172, up 18.9 percent from the year-ago 1,728,198.

Ford regained the calendar-year lead from Chevrolet in October as its dealers sold 90,670 trucks, 88.2 percent higher than last year's 48,179. Through October, the Ford total was 808,016, up 22.7 percent from the year-earlier 658,424.

No. 2 Chevrolet said its dealers retailed 82,126 vehicles during the month, a gain of 45.2 percent over the year-ago 56,551 units. The 10-month total was 19.9 percent higher, from 671,890 units in 1982 to 805,900.

Dodge and Chrysler-Plymouth dealers sold 23,530 new trucks during the month, an increase of 30.9 percent from last year's 17,978. Through October, the count was up 6.8 percent to 222,834 units, compared with 208,566 in 1982.

• GMC reported that its dealers retailed 22,634 vehicles during the month, up 48.2 percent from last year's 15,272. The 10-month total was 15.4 percent higher than a year ago, 218,422 units versus 189,318.

Sales of four-wheel-drive Jeep vehicles in October totaled 8,066 units, an increase of 40.8 percent over last year's 5,727. Through October, the count was 61,173, up 15.7 percent over the year-earlier 52,857 units.

Volkswagen dealers retailed 271 compact front-wheel-drive pickups during the month, down 73.6 percent from last year's 1,025 units. The 10-month total was 4,581, off 58.6 percent from the 11,076 units sold in the like period in 1982.

During the month, Toyota said, its dealers sold only 9,215 compact pickups, a decline of 31.1 percent from the year-ago 13,376. Through October, however, the count was up 17.2 percent to 140,722 units, compared with 120,087 in 1982.

Nissan dealers retailed 7,950 vehicles in October, down 34.1 percent from last year's 12,066. The 10-month count was 38.8 percent higher than a year ago, 115,891 versus 83,478.

Mazda reported a record 7,204 sales during the month, an increase of 126.7 percent over the year-earlier 3,178. Through October, the total was up 80.5 percent to 59,428 units, compared with 32,928 a year ago.

During the month, Isuzu dealers retailed 2,699 compact pickups, a gain of 55.7 percent over the year-earlier 1,629. In the January-October period, the total was up 39.6 percent, from 14,740 units in 1982 to 20,572.

Mitsubishi, starting the second model year with its small pickups, reported 938 sales in October, a gain of 272.2 percent over the year-earlier 252. Ten-month sales climbed to 7,101 units.

Experience unnecessary; in fact, it's unwanted

Ford extends sales-recruit drive

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Using a recruiting technique developed by Lincoln-Mercury earlier this year, Ford Division last week sponsored a drive here to hire 50 new salespersons from 260 applicants for 19 area dealerships.

The program, designed to bring new blood into the auto industry, has been used by Ford Division in 18 markets and Lincoln-Mercury in 5.

According to Larry Rochon, curriculum development manager for Ford Marketing Institute (which trains the successful candidates), Ford has hired more than 500 people out of 5,500 applicants.

Each new hire is given a two-week sales training program at FMI and then is put on salary at the dealership for three months.

After the 90 day period, the person converts to the dealership's commission-based pay scale.

The idea behind the drive is to bring new people into the business, Rochon said, adding that previous sales experience is not required and that the screening process is designed to weed out those who have worked for dealerships before.

In reviewing the number of applicants, Rochon said "these programs have brought an awful lot of people in." He reported that the retention factor (those who stay on at the dealership after 90 days) is in excess of 60 percent nationally.

"The retention of salespeople is beyond dealer expectations," he said. "They (dealers) like the program very much."

• More than 200 Ford dealers have participated in the recruiting drive and Rochon expects that its success will foster a return of the program to some markets.

Last week's drive in Los Angeles was conducted at three locations and more than 260 applicants were interviewed. After applications are filled out, candidates identify their dealership preferences and have interviews with either the sales manager or principal of the selected dealership.

Spouses of salespersons being hired were also interviewed at the assigned dealership so that all parties understood both the requirements and opportunities of the job, according to Rochon.

About half the people recruited by Lincoln-Mercury in Los Angeles over six months ago are still on the job, Rochon said. A couple of them are doing very well at their dealerships. Sylvia Marshall, who works at Hollywood Lincoln-Mercury, is typical.

Car production
U. S. car production highest in 2½ years. Story on Page One.

"I hadn't ever thought about car sales," Marshall said. She had been doing public relations work for a number of years, but was out of work and trying to get into sales when the opportunity came along.

A neighbor saw a news report on the recruiting drive, convinced Marshall she should go and even lent her car to Marshall so she could be interviewed.

"They (Lincoln - Mercury) kind of sold me," Marshall said. "They were hiring people with no car experience. It was very good for me."

• She feels the program is part of an overall plan by the company to change the image and techniques of car sales personnel.

"The only other times I was in a dealership, I was terrified (of the salesmen)," Marshall admitted. She said buyers today are turned off by high-pressure situations and that a more low-key approach fits in with her selling style.

She said the dealership's general manager, Mike Sullivan, has been supportive. "They had confidence in me. The more I tried, the more backing they gave me," she said.

Rochon said that's typical for those involved in the program. "The dealer who sees a good candidate is willing to work with him or her more," he said, rather than just turning the person loose on the floor.

Marshall said the first weekend she worked, which was in the middle of the two-week FMI training session, she sold her first car. She went off the guaranteed salary (which, according to Rochon, is generally $1,000 a month) to the dealership's regular commission scale.

"If I hadn't had the guarantee, I don't think that I could have done it," Marshall said. "When you've been on salary your whole life, going to commission is awesome. But once you get used to it, it means more money."

Marshall said the new job has turned her life around. "I have more self confidence," she said. "I like the immediate reward and the responsibility. It's a career for me."

Overtime pushes truck output over 58,000 for week

Domestic truck production last week was targeted at 58,214, the highest since 58,483 units were built in the week ended July 14, 1979. Nine assembly plants worked extra hours last week.

The week's total exceeded the prior week's 57,914 and was 76.22 percent more than the 33,035 built in the year-ago period.

Year-to-date, there have been 2,133,000 trucks assembled, up 24.06 percent from last year's 1,719,384.

General Motors had its Detroit plant working one shift last Saturday (Nov. 19) and its Lordstown (O.) point working two shifts.

All six Ford facilities were on overtime schedules last week, with Lorain (O.) operating on Saturday and the other plants working extra daily hours. This week, all six Ford factories will put in daily overtime.

Chrysler Corp. had its Warren (Mich.) plant working two daily 8-hour shifts.

All truck facilities will be idle Thursday and Friday this week in observance of the Thanksgiving holiday.

Car output falls in Canada as GM scraps overtime

Last week's Canadian car production was targeted at 20,930, down 8.96 percent from 22,989 units assembled the week before, and 65.34 percent over the 12,659 built in the year-ago period.

General Motors plants worked several hours of overtime the week before last and did not put in extra hours last week. That accounted for the decline in production.

So far this year, the manufacturers have completed 854,421 cars, leading the year-ago output of 755,394 by 13.11 percent.

Truck production last week was estimated at 14,438, topping the prior week's output of 11,307 by 27.70 percent. It was nearly double the year-ago week's total of 7,402.

Year-to-date, there have been 479,186 trucks completed, up 9.12 percent from 439,155 finished at this time last year.

So far, there have been 5,725 T-115 minivans built at Chrysler Corp.'s Windsor facility.

Auto makers facing loss of imported parts saving

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — The cost of imported parts to domestic car makers could be affected by possible changes in the U. S. Foreign Trade Zone program.

Partly because the program has experienced tremendous growth in the past three years, two government agencies are reviewing Foreign Trade Zone rules which may be subject to legislative action some time next year.

A Commerce Department rulemaking is also expected in February that may be affected by the two investigations.

A 1980 amendment to the U. S. Foreign Trade Zone law allowed manufacturers to beat high tariffs on some imported parts. Since that time, each of the Big Three — as well as American Motors, Volkswagen, Toyota, Honda and Nissan — have all applied for or been awarded Foreign Trade Subzone status for certain plants.

The program allows parts to be imported for assembly without incurring immediate tariff costs. Tariffs are paid only when products leave the zone.

This is an advantage to auto makers because the tariffs on finished cars are generally less than those imposed on component parts, according to John DaPonte, head of the Foreign Trade Zone office at the Commerce Department.

This cost savings has been estimated at $20 per car by the MVMA. "This is a major per-vehicle savings which would be difficult to duplicate by any other single action available to a manufacturer," MVMA has said.

• But this important "per-vehicle savings" is currently under scrutiny by the U. S. International Trade Commission and the General Accounting Office. The agencies are conducting concurrent investigations into Foreign Trade Zone usage at the request of Rep. Dan Rostenkowski, Illinois Democrat and Chairman of the House Ways and Means Committee.

Some U. S. part manufacturers, both in and out of the auto industry, as well as organized labor, have called for an investigation into the program because they feel it has turned into a "subsidy" for imports.

This "subsidy" is promoting unfair competition with wholly U. S.-sourced products and is causing net job loss, opponents claim.

According to DaPonte, the legislation was originally written to promote U. S. assembly of foreign-made products. Other nations use mechanisms similar to foreign trade zones. And in a more favorable free-trade environment, these "free trade zones" are intended to facilitate give and take in international commerce.

However, as U. S. manufacturers — such as the auto companies — have applied for and received government permission to operate in trade zones, questions have arisen as to their cumulative effect on the U. S. industrial economy.

Since 1980, according to MVMA, six automobile manufacturing subzones have been activated by member companies. They are AMC's Kenosha (Wis.) plant; Chrysler's Jefferson assembly plant in Detroit and its St. Louis assembly plant in Fenton, Mo., and Ford's Wayne (Mich.) assembly plant, its electronic plant and its Kansas City assembly plant.

Volkswagen's Westmoreland plant in New Stanton, Pa., also operates under a foreign trade subzone.

Plants approved but not activated include Ford's Wixom (Mich.) and Dearborn assembly plants, GM's Lakewood assembly plant near Atlanta and GM's Doraville (Ga.) assembly plant.

Remembrance

A Lyon is in the street

Russ Lyon, president of Lyon Motor Works, Inc., Ramona, Calif., built this prototype 1930s-style roadster in 3½ years. The 2,445-pound car has been tested at under 5 seconds going from 0 to 60 MPH, Lyon said. Story on Page 53.

Europe's push for emission controls a step toward internationalization

Ford sees a new spur to world car

By Kathleen Hamilton
Financial Editor

Ford Motor Co., the auto maker that popularized the term "world car" when it introduced its Escort four year ago, sees the possibility of another giant leap in internationalization of its product in Europe's drive for emissions controls.

The convergence of world auto markets has occurred rapidly and is changing Ford's products and operations, Robert A. Lutz, executive vice president—Ford International Automotive Operations, told a meeting of the Detroit Auto Writers Group.

"Five years ago, I never would have believed it," Lutz said. "Now I see a convergence. I see a convergence in emissions controls . . . in the similarity of driving modes" and in pricing structures between the U. S. and Europe.

"It would be unintelligent not to think of common tooling," he said.

If Germany leads the other European markets into emissions regulations that are the same as U. S. 49-state rules, "At least we would have the world's two largest markets—each at 10 million units—together. That clearly would open up opportunities in investment and stamping without tremendous re-engineering costs," he said.

• It also could pave the way for U.S.-designed-and-built Ford cars to compete in Europe, Lutz said.

When asked if Europe is ahead of the U. S. in engineering, Lutz said, "Five years ago I would have said 'yes.' But I don't believe that anymore. The total commitment of the industry in the U. S., in which engineers can express their creativity, makes it hard to argue now that the Sierra is better than the Tempo/Topaz."

Design intent and market segment differ, but both are equally well designed and built, Lutz said.

The performance version of the Sierra, to be named the Merkur XR4 in the U. S., will be constrained by production capacity for at least several years, Lutz said.

A four-cylinder turbocharged engine will be adopted for the U. S. chiefly because the European V-6 lost performance and driveability when adapted to U. S. emissions standards, Lutz said.

Prototypes of the turbo four have matched the noise, vibration and harshness level of the V-6, Lutz said. And if Ford's European engineers can improve the emissions of the V-6 for their own market, the engine could be fitted in the U. S. XR-4s, too, Lutz said.

Ford has no current plants to consolidate its three truck oper-

State proposes changes in advertising regulations

Bait-and-switch complaints stir N.J.

By John A. Russell
New York Staff Writer

NEWARK, N. J. — An extraordinary number of consumer complaints charging bait-and-switch tactics by auto dealers, particularly those handling Japanese makes, has prompted the Division of Consumer Affairs to propose changes in the state's advertising regulations.

Each complaint is being investigated for possible legal action against the dealers involved, according to James Barry, director of the division.

Barry told Automotive News there has been a significant increase in the complaints, which now average 100 per month. They involve varying degrees of bait-and-switch.

Two tactics figure prominently in these complaints. One involves dealers taking orders for cars built to consumer specification, taking their deposits and never filing the orders with the manufacturer, since the dealer knows full well these cars cannot be built to specification.

When a car of that model, though with more options, is received at the dealership, the dealer calls the consumer and tells him this is what is available and he can have it at the higher price.

• The second tactic involves dealers advertising stripped models at unusually low prices and taking orders for delivery in six to eight weeks.

Barry said the dealers know they will not receive stripped versions of cars since most high-demand cars are being built loaded. When the car does arrive at the dealership the consumer is again sold on the higher priced model.

Deposits, according to Barry, range from $200 to $500 and the additional options range from $500 on up.

A number of consumers do buy the cars, he said, noting they have been placed out of the market for several months and the dealer is still holding their money.

"We see this often with dealers who handle Japanese makes," he said, but he also mentioned other dealers who have cars in demand.

The change in the advertising regulations would attempt to eliminate at least one part of this problem. The proposal will be completed in 30 days, according to Barry. The division wants to require that when dealers advertise stripped models for low prices they must have at least one of those cars on their lots available for purchase.

Under state law, the change will be published in the state register. There will be public

New 3.0-liter V-6 for Buick N-car

FLINT.—Buick's new "high-tech" 3.0-liter V-6 engine will debut in 1985 as an available powerplant in the division's new N-body Somerset Regal coupe. Despite its 90-degree configuration, the new V-6 is smaller than conventional designs and can be mounted transversely in the N-body. GM's new "N" series — coupes in '85 and sedans in '86 — is only slightly larger than the J-body.

Jury orders Ford to pay $106.9 million

CORPUS CHRISTI, Tex. — Ford Motor Co. has been found guilty of negligent design of the Mustang II by a jury here, which awarded the family of a 20-year-old woman killed in a 1978 accident damages of $106.9 million. Devery Durrill

And company prefers it that way

GM expects to become target in '84 bargaining

By Marjorie Sorge
Labor Editor

General Motors expects to be the strike target in next year's contract negotiations with the UAW, according to Alfred S. Warren, GM industries relations vice president.

In an interview with AUTOMOTIVE NEWS, Warren said GM not only expects to be the target but prefers to be.

Many labor observers agree that because of GM's high profits—the company is expected to make $3.6 billion in 1983—the UAW will choose the nation's largest car maker as the target, leading the way to other negotiations at Ford Motor Co. Both those contracts expire Sept. 15, 1984.

In the interview Warren also said the annual improvement factor (AIF) is a dead issue which was swapped away during 1982 bargaining. GM and the UAW negotiated the annual raise in 1948, and it has continued in each contract until 1982.

Warren indicated that profit sharing is the way to go. That formula was negotiated in the 1982 contract.

"I think it lets the employe share in the good times but also lets him know that when we are in bad times, there isn't anything to share," he said.

Former UAW president Douglas A. Fraser has said he believed that in the future profit sharing could replace the AIF if the formula was improved.

GM will pay out its first profit-sharing checks for 1983. According to Warren, that could be about $600 per employe. There are 351,801 hourly employes at GM.

The 1982 settlement was an exchange on both sides, Warren said, and anything that the UAW wants back must be exchanged for something else in 1984 bargaining.

• "It is not a matter of giving back," he said. "We made a fair exchange. We both signed the agreement in '82 in good faith.

"There were things we would have liked to have had and didn't get, and I'm sure there were things they gave up and would like to have had and they didn't get. But having signed the agreement, that's history. That's where we are now. Where do we go from there?"

In 1982, the UAW and GM reached a settlement after negotiations which provided exchanges that saved GM about $2.5 billion. GM had said it needed the exchanges to remain competitive in the international marketplace.

According to Warren, the major concern in any bargaining is remaining competitive, now not just with Japan but with the other U. S. manufacturers.

"We've come out of the recession and we've come out well, I think, and everybody thinks those problems are gone," he said. "The same problems are there. We still are non-competitive despite the fact that we look profitable. In the long run, that non-competitiveness is going to get to us. It may not get to us this year or next year, but it is going to get to us.

"We're making our money now on big cars. If there is any kind of a jolt in the market in terms of roll where all of a sudden people begin to put the emphasis on small cars, we're right back where we were before.

"We've said repeatedly that we simply don't have the capability to profitably build small cars. As we go back into it (negotiations), somehow or other we've got to help our employes and the union understand that fact.

"I think the hierarchy of the union understands this, that when you're spending $9 billion here in terms of capital investment to become profitable and make $2.5 to $3 billion somewhere in there, you're not paying the debt. Our debt is going up and up and somewhere in there it has got to get you."

Sales upturns halted at 17 by mid-month drop

A mid-November domestic sales decline snapped the industry's 17-period winning streak and was a kind of payback period. A year earlier the auto makers launched low-interest-rate financing programs for customers that substantially ballooned November sales.

Total for the period was 174,861, down 17.09 percent from 210,917 in 1982. With eight selling days this year the daily rate was 21,858 compared with 23,435 for nine days in '82.

General Motors plunged 23.38 percent in mid-November, to sales of 107,614 from 140,457 last year. Ford Motor Co. missed its year-ago mark by 7.47 percent, dropping to 40,395 from 43,658. Chrysler Corp. sales of 18,138 were down 7.91 percent from 19,696.

American Motors' reported estimated sales of 5,200 were up 41 percent from the year-ago AUTOMOTIVE NEWS estimate of 5,000. Volkswagen was down 4.04 percent during the period, to 2,021 from 2,106, and Honda Accord sales totaled 1,493.

GM earned 61.54 percent of the mid-month domestic market, down from 66.59 percent. Ford had 23.10 percent, up from 20.70 percent. Chrysler climbed to 10.37 percent from 9.34 percent. AMC was up to 2.97 percent from 2.37 percent. VW slipped to 1.16 percent from 1.00 percent, and Honda picked up 0.86 percent of the current market.

Year-to-date sales totaled 6,017,203, up 16.84 percent from 5,149,824 in 1982.

Investment option linked to GM profit-sharing

DETROIT. — Salaried and hourly workers at General Motors will be able to optimize their tax benefits when they receive their 1983 profit-sharing awards early next year.

GM and the UAW have agreed to allow hourly workers to decide whether to receive their profit-sharing payout by check or put those funds in a tax-deferred investment trust.

Salaried workers can opt for payment by check or have those funds placed in their Savings With a Plus account. This permits participating employes to designate that up to 15 percent of their earnings be placed in a tax-deferred investment trust.

Happy winners

Top winners in Chevrolet's "First Annual Salesperson Walkaround Championship" smile happily at winning top awards. John C. Waller, left, of Conrad Chevrolet, Lexington, Ky., won a customized van, and Merle Miller, Les Shellabarger Chevrolet, Grand Junction, Colo., won a new Corvette. Between them is Robert E. Cook, Chevrolet general sales manager.

Product knowledge stressed in contest for salespersons

Selling for big prizes at Chevrolet

By Joseph Bohn
Marketing Editor

WARREN, Mich. — Cars and car buyers are getting more sophisticated. And salespersons have to match them, Chevrolet feels.

The division recently staged its "First Annual Sales Person Walkaround Championship" in which 27,000 salespeople competed for some very lucrative prizes, including Hawaii trips and two $25,000 vehicles.

At the finals here, six car salespeople — all regional winners — took their best shot at "selling" the strengths of a Cavalier. The winner got a new Corvette. Similarly, six truck finalists competed for a customized van.

Participants had to do a "walkaround," giving detailed product pitches for the Cavalier in front of a group of wholesale and retail judges.

This included opening doors, trunks, hoods — while giving a showroom-floor-style presentation of everything from marketing strategy (demographics, model lineup) to styling (moldings, front end, aerodynamics) to powertrain and chassis, room and comfort, standard features, options and quality.

Chevrolet developed a seven-point program for cars (with as many as 11 subheads, in some cases) and five points, with subheads, for trucks, which salespeople had to cover.

• Presenters were rated on style, appearance and continuity of presentation, as well as their product knowledge. Some pitches ran for 15 minutes. And, without knowing which car they'd have to judge, the contestants had to be prepared to talk about any of eight car lines.

There was a good deal of pressure — and drama. One presenter, for example, inadvertently referred to the limited availability of the Cavalier convertible in his pitch.

In a runoff between two top presenters, which focused on Celebrity, one salesperson slipped up on a few technical details (such as chrome bumpers, which the car doesn't have). And that made the difference.

Generally, the mix of finalists was impressive. Two were ministers. There were ethnic and female representatives in the group.

The winner of the truck award was an elated, 30-year-old newcomer to selling Chevrolets. He was John C. Waller, of Conrad Chevrolet, Lexington, Ky.

Waller's emotion was irrepressible. A more subdued Merle Miller, of Les Shellabarger Chevrolet, Grand Junction, Colo., won the Corvette in the runoff.

Generally, Matthew K. Murphy, national manager of car merchandising, and other Chevrolet officials were very pleased with the outcome. They felt it stimulated salesmen to study the product all the way up the line.

• A salesmen from the Phoenix zone reported improving his sales rate from four to 14 units monthly as a result of product knowledge he'd picked up while competing.

"We've found in the last several years especially, through all the research that's been done, that people today know the product better than they ever have in the past," Murphy said.

"They demand professional presentations, and they demand product knowledge out of salespeople," he said.

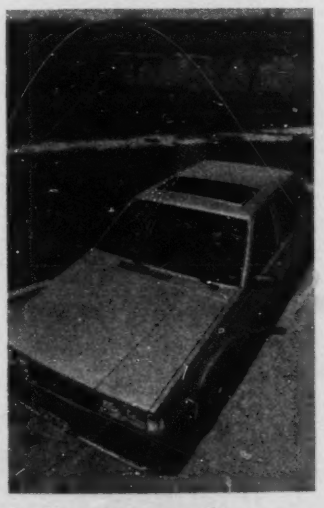
"We know cars are similar today in size, features — so to get the added plus, it really helps us for a salesperson to walk a customer around the car and be able to point out its benefits and features," Murphy added.

Robert Cook, general sales manager, noted that "our success in the future will be determined by enhancing the buying experience and enhancing the ownership experience — to make it a tad better than what's offered down the street."

Chevrolet initially had each dealer stage an in-dealership competition to pick his best-versed sales person. That phase concluded Oct. 7.

The district-level competition, with more than 8,000 competitors in 394 districts, concluded Oct. 21. Competition was narrowed down to 42 zone competitors by Nov. 4. And finally 12 regional winners — two from each region — competed in the Nov. 17 finals.

Competitors received awards, ranging from recognition certificates to wall trophies and $300 in performance points — plus the Hawaii trips for finalists and the two vehicles — right on up the line.



Volvo moonroof

Sky-Top Sunroofs, Ltd., St. Louis, is marketing this power moonroof for the '84 Volvo 760-GLE. The roof is electrically operated and its mirror-coated glass panel is offered in two colors, silver or bronze.

IH will close casting facility in Louisville

CHICAGO. — International Harvester has announced it will close its Louisville (Ky.) foundry because of overcapacity in the foundry business. The closing will result in the layoff of most of the plant's 710 workers.

The Louisville foundry makes metal castings for engine and large tractor parts. It has been operating at about 40 percent capacity.

The company said demand for the foundry's output was down because of a slump in agricultural implement sales. The plant will be closed within the next 11 months, IH said.

IH said its foundry in Indianapolis will take over some of the Louisville plant's production. The company will also use outside suppliers for some of the castings now made at Louisville.

Pittsburgh dates set

PITTSBURGH. — The Pittsburgh Auto Show will be held Feb. 8-12 at the David L. Lawrence Convention Center here.

Saab Turbo No. 100,000

The 100,000th Saab Turbo has been completed in Trollhattan, Sweden. It is shown here with the team that did the final work on the car. At far right is Per-Anders Karlsson showing the check-list for this milestone car to Mats Ransjo, production manager for the paint shop and final assembly.

Despite gain in registrations for month

Import market share is slashed

By Jenny L. King
Staff Writer

Registrations of new imported cars were up slightly in September compared with the year-ago total, but their penetration of the total U. S. market dropped more than 3 percentage points as domestic registrations rose at a much faster pace.

Import registrations for the month numbered 206,747 this year, up 4.68 percent from 197,508 in 1982, according to figures compiled by R. L. Polk & Co. Their share of the market slipped to 28.12 percent from 31.62 percent.

Nissan topped the imports in September with 44,093 new registrations, up from 40,230 a year ago and up 0.96 percentage points in share of the import market.

Toyota slipped into second place while losing 2.55 percentage points. Third-place Honda gained 2.22 percentage points as its number soared to 35,761 from 29,789. The Honda total includes U. S.-built Accords.

Mazda, Volkswagen and Subaru were down 0.25 percentage points, 0.23 percentage points and 0.57 percentage points, respectively. Volvo was up 0.10 percentage points, Mercedes was up 0.32 percentage points and BMW was up 0.27 percentage points in September. Audi claimed 10th place this year and Colt slipped from the top 10 chart.

Ten makes accounted for 88.88 percent of import registrations in September, down from 89.04 percent a year earlier.

• Year-to-date import registrations, January through September, were up 9.34 percent, to 1,853,210 from 1,694,830 in 1982. Their share of the total market waned, to 28.27 percent from 29.96 percent.

Toyota maintained its hold on first place for the nine months with 22.41 percent of the import market. Second-place Nissan had 21.49 percent, followed by Honda at 15.87 percent. Of the top three, only Nissan improved its share of the market, up 1.35 percentage points over last year.

Other makes with deeper inroads in the market were Mazda, up 0.08 percentage points; Volvo, up 0.33 percentage points; Mercedes, up 0.09 percentage points, and BMW, up 0.11 percentage points.

The top 10 imports claimed 89.07 percent of the import market for the first nine months of 1983, down from 89.99 percent the same period a year earlier.

In September, 76.58 percent of the import segment was made up of Japanese-built cars, down from 79.11 percent in 1982. German cars accounted for 10.67 percent this year, 13.93 percent a year ago; Swedish cars claimed 3.62, unchanged from 1982.

Car registration by country of origin were:

	Sept., 1983	Sept., 1982
Japan	158,323	156,256
West Germany	22,060	19,535
United States	12,732	7,976
Sweden	7,486	7,155
France	4,116	4,338
Great Britain	1,317	876
Italy	584	1,140
Ireland	129	232
TOTAL	206,747	197,508

For the nine-month period, Japanese cars claimed 77.09 percent of the import market, down from 78.18 percent in 1982. Numbers of imports from the major car-producing countries were as follows:

	9 months, 1983	9 months, 1982
Japan	1,428,727	1,324,965
West Germany	190,832	160,364
United States	88,359	72,964
Sweden	88,527	71,095
France	37,039	37,536
Great Britain	11,542	7,097
Italy	7,447	12,299
Ireland	737	2,510
TOTAL	1,853,210	1,694,830

Imported truck registrations climbed 38.17 percent this September, to 52,091 from 37,700. Totals from the major truck makers were:

	Sept., 1983	Sept., 1982
Toyota	20,465	14,870
Nissan	14,439	8,702
Mazda	6,344	3,298
Dodge Ram 50	3,811	2,750
Others	7,032	8,080
TOTAL	52,091	37,700

Registrations of imported trucks for January through September, 1983, were up 15.98 percent from the preceding year, going to 362,436 from 312,489. Totals by maker were:

	9 months, 1983	9 months, 1982
Toyota	129,502	105,981
Nissan	98,617	69,008
Mazda	49,613	27,058
Dodge Ram 50	22,608	23,237
Others	62,096	87,205
TOTAL	362,436	312,489

White Motors' second plan for reorganization accepted

CLEVELAND. — White Motor Corp.'s second modified reorganization plan has been accepted by its creditors and confirmed by the U. S. Bankruptcy Court here. The firm has been under Chapter 11 protection since September, 1980.

Wallace B. Askins, White chairman, said distribution of cash and securities to creditors will begin today (Nov. 28).

Under the plan, White will change its name to Northeast Ohio Axle, Inc., and continue to manufacture truck front axles. Each outstanding share of White common stock will be converted into one-tenth of a share of common of Northeast Ohio Axle.

All other White assets will vest in the trust created under the reorganization trust agreement, which assumes substantially all White liabilities and will distribute the cash and securities.

Askins said about $137.7 million will be paid by the trustee, John T. Grigsby Jr., to holders of allowed claims.

Initial cash payment to general unsecured creditors is expected to be approximately 41 cents per $1 of allowed claim.

• These creditors also will receive approximately one share of the common stock of Northeast Ohio Axle for each $50 of allowed claim, plus approximately one share of each of the Class A, Series A; Class B, Series A, and Class C, Series A preferred stock of Northeast Ohio Axle for each $725 of their claim.

Senior unsecured creditors are expected to receive about 44.3 cents per $1 of allowed claim initially. Senior debenture creditors and subordinated debenture creditors are due to receive about 49.5 and 13.9 cents, respectively, per $1 of allowed claim.

A trust fund established to assist in providing health-care benefits for White retirees will receive about $12.9 million.

Under the stock-purchase agreement, WM Financial Corp., an affiliate of Dyson-Kissner-Moran Corp., has agreed to invest in Northeast Ohio Axle and its subsidiary, Gemini Mfg. Co.

WM Financial will own 26 percent of the common stock of Northeast Ohio Axle and 19 percent of the Gemini shares. The firm also will have an option to buy an additional 48 percent of the Gemini shares.

As a result of its reorganized capital structure and WM Financial's investment, Askins said, Northeast Ohio Axle expects to expand into related businesses.

De Peyster named manager of AN World Congress

Sandra E. De Peyster has been named manager of the Automotive News World Congress.

De Peyster, who has been with Crain Communications, Inc., for two years, formerly was administrative assistant for the Automotive News World Expo. World Congress and World Expo make up Automotive News Week.

Sandra De Peyster

"We are pleased to name Ms. De Peyster to her new position, a natural evolvement from her work on Automotive News Week," said Keith E. Crain, publisher of AUTOMOTIVE NEWS, which sponsors the two programs.

De Peyster was active in stock brokerage and sales training before joining Crain Communications.

Automotive News Week will be held Aug. 26-30 in 1984, with World Congress running Aug. 26-29 and World Expo, Aug. 28-30.

Renault Mexico closes plant for two months

MEXICO CITY. — The Mexican Renault assembly plant has suspended activities for two months — until Jan. 15, 1984 — because of a severe drop in car sales and the dire straits of the automotive sector, according to a management report.

Thomas Guevara Quiroz, head of the Renault Workers Union, said that the plant will resume operations on a three-week monthly schedule and that Renault is dismissing 450 workers with severance pay. During the idle time, he said, workers will receive 50 percent of their normal salaries.

Cash and prizes offered by L-M to spur sales

DETROIT. — Lincoln-Mercury has some companion contests to those previously announced for Ford Division (AUTOMOTIVE NEWS, Nov. 21).

L-M has two separate contests, one for salespeople and another for sales managers. They both carry the title "Holiday Breakthrough."

A salesperson incentive on '83/'84 Lynx and Topaz runs from Nov. 11 to Dec. 31. It pays from $25 to $250 per sale of either of those car lines, based on a randomly selected computer drawing. The average payment is about $75.

There is a volume incentive which doubles payments. Beginning with the third and every unit thereafter, salespersons get two draws, with a guaranteed minimum payment of $25 each.

Finally, on manual transmission Topaz models, salespeople earn double whatever they drew.

A sales manager contest on '83/'84 Cougar runs from Nov. 11 to Dec. 10. All dealership managers compete in grouped competition, with the top 150 winners further competing for a superprize.

Some 50 managers will get one-day trips to Dallas for a $3,000 shopping spree at Neiman Marcus. The other 100 will get $1,000 in gift certificates.

RV dealers in Dallas see boom in '84

By Aziz Shihab
Staff Correspondent

DALLAS. — The recreation-vehicle business in the Dallas area is up nearly 25 percent so far this year compared with the same period last year.

RV dealers call 1983 "the best year ever," and they are predicting a "booming 1984."

They also say high-priced vehicles, $50,000 and up motor homes, are their best sellers. This, dealers say, is a reflection of the strong economy in Dallas.

George Bennett, owner of May Trailers in Lewisville (a growing suburb of Dallas) and president of the Dallas chapter of the Texas Recreational Vehicles Assn., said "we have sold a lot of motor homes this year. The more expensive ones, those selling for $50,000 and up, are our best sellers.

"Buyers are mostly couples who retired and who want to enjoy quality. Also, we are selling to businessmen who use the motor homes in their business."

Bennett said the next best sellers are the fifth-wheelers, which are selling from $10,000 to $30,000 "because one can still buy a pickup with a good-size engine."

• He said travel trailers, the "regular luxury trailers," are also good sellers.

Bennett said tent trailers are moving slowly "because cars are getting smaller and smaller. If there is a problem in the industry today, it is the shortage of good tow vehicles and the fact that cars are getting smaller."

He also said recent talk of possible Middle East problems (Iran's threat of blocking oil supply routes to avenge France's delivery of new sophisticated warplanes to Iraq) is "making RV dealers nervous. This talk can't really hurt us."

Bennett said the industry is still recovering from the energy shortages of the '70s when "a lot of dealers just couldn't make it. It is only this year that we really began to see good things happen and business get back to normal."

He said dealers now have no problems "selling paper," and money for dealer and consumer financing is plentiful from banks, savings and loan associations and credit unions. He

Elk's luxury El Capitan

A new luxury van conversion, the El Capitan, has been introduced by Elk Enterprises, Elkhart, Ind. Standard features include fiberglass running boards with matching paint finish, a ladder, floor and door-well mats, a seven-inch color television with table/cabinet combination, custom wheels and a removable travel section (server, clothes caddy and ice cooler).

RVs pull across board in Twin Cities market

By Ken Berglund
Staff Correspondent

MINNEAPOLIS. — Wealthy entertainers looking over a bus chassis for expensive custom work . . . young couples with two or three children inquiring about economy motor homes. This is the wide range of interest in RVs in the Minneapolis and St. Paul area, according to a cross section of dealers queried.

Wakefield Coach expects to finish the year in excellent fashion. The custom firm has "already done six conversions and should finish with eight," according to salesmen. True luxury units, the coaches are built on a Greyhound bus chassis to the customer's specifications.

Grosses are up substantially for the firm, which also handles used buses. Mechanics take out seats, overhead racks and overhaul the engine before adding the interiors. These reconditioned units sell for from $90,000 to $100,000. Coaches created from new bus chassis can cost $280,000 or more and take from six to eight months to complete.

Chevrolet RV Center, on the other hand, is seeing "more young couples with two or three children. This indicates a "firmer economy with more money around for vacations and trips."

The firm makes many sales in the retirement market, where financing is not a major concern. Where financing is sought, it is often for tax purposes. The firm will carry a larger inventory than usual this winter.

Salesmen noted that factories are behind on deliveries because of the demand. The company finds its used market strong since many first-time buyers want to "try a $15,000 unit before committing themselves to $30,000."

• At Coates Trailer Sales, grosses are up around 10 percent, with an improving economy given credit. As a result, Coates will carry around 10 percent more inventory than in previous years. Strong areas here are in

Dealer network in U.S. is set up by Western Star

BELLEVUE, Wash.—Western Star Trucks, a new entrant in the heavy-duty truck market, has established 57 sales outlets nationwide. The firm opened its headquarters here earlier this year.

K. Scott Kennedy, vice president and general manager, said Western Star expects to complete a 100-member dealer network by late 1984, and noted that most of the dealers have years of experience in the heavy-truck business.

Of the network members, 34

'84 TranStar has six floor plans

TranStar intermediate-size motor homes, produced by Champion Home Builders Co., Dryden, Mich., have six floor plans, lengths of 20, 23 and 25 feet, and are built on a Chevrolet or Ford chassis. Standard features include two exterior rear-storage lockers for gear too awkward to carry inside.

Polk ranks Ford No. 1 in '83 model-year total

DEARBORN.—Registration figures for the 1983 model year show that Ford dealers put more than 16,500 more new trucks on American roads than their chief competitor.

Official figures released by R. L. Polk & Co. show 864,006 new Ford trucks registered for the model year, which ended September 30, compared with 847,492 Chevrolet truck registrations. Ford 1983 model-year registrations were 24.5 percent higher than the 693,981 tallies in the 1982 model year.

truck industry news

9-month, September truck registrations are highest since '79

Nine-month and September registrations of new trucks of all types in the U. S. were the highest in four years, with gains in two of the three market segments for the January-September period and in all three for the month.

Table on Page 42.

Through September, according to R. L. Polk & Co. statistics, there were 2,127,031 new-truck tallies, an increase of 19.8 percent over the year-earlier 1,775,915 units.

The highest previous nine-month total occurred in 1979, when the count was 2,644,904 units.

During the month, 249,084 vehicles were registered, 36.7 percent higher than last year's 182,180 units. Four years ago, the total was 293,704 units.

Registrations of light and medium trucks in the first nine months were higher than last year, but heavies were down slightly. All three market segments showed good gains in September.

Through September, light-truck registrations totaled 2,000,637 units, an increase of 21.6 percent over the year-earlier 1,644,672. Mediums were up 4.2 percent to 34,810 units, compared with 33,414 in the like period a year ago.

• Heavy-truck registrations through September were off 6.4 percent, from 97,829 units a year ago to 91,584.

In September, light-truck tallies were up 37.5 percent to 230,143 units, compared with 167,515 in the same month a year ago. Mediums totaled 5,467

Continued on Page 30, Col. 5

HD registrations in September up 35.8 pct. over '82

September registrations of new heavy trucks in the U. S. were the highest for any month since December, 1981, and it marked the first time since December, 1980, that the monthly count had exceeded the year-earlier total.

During the month, according to R. L. Polk & Co. statistics, 13,204 Groups 7 and 8 trucks were registered, an increase of 35.8 percent over last year's 9,721. In December, 1981, the count was 14,339.

Registrations in September were higher than a year ago for both heavy-truck groups.

The Group 8 total this year was 8,589 units, an increase of 46.9 percent over last year's 5,

High priced units called best sellers

RV dealers in Dallas predict a 'booming 1984'

Continued from Page 10

said interest rates are running between 15 percent and 18 percent.

RV dealers in the Dallas area, Bennett said, are still keeping a good stock to sell to the snowbirds who come to Texas during the winter from the north. He said although the busy season runs from March through August, "our winters have been good and we are expecting a great winter this year."

Bennett said RV business in Texas is "one of the strongest in the nation. We used to run No. 3 or No. 4 in the U. S., but this year we are No. 2, right behind California and by the end of the year we may even surpass California."

He said the best indication of this strength, especially in the Dallas area, is the fact that dealers are "upgrading their facilities and expanding." He said he knows of several dealerships, including his own, which are planning to spend a million dollar-plus each for expansion during the next few months.

Bennett said the 35 RV dealers in Dallas are "doing great, really great this year."

The best indication, he said, is the fact that these dealers are competing for space at the Texas Sports and RV Show to be held at the Dallas Convention Center in March.

In the past few years, he said, it was difficult to get the dealers' participation and some times it was difficult to get them to pay for space. But now, they are competing for space and paying in advance, he said.

At a recent Texas Recreational Vehicle Assn. meeting in Dallas, Betty Hunt, a dealer in Houston and president of the association, said business in Houston was "a little slow since our business is directly related to the oil industry. But, overall, it's good and we expect a 'booming '84' "

Hunt, owner of Hunt Motors & Campers, also said dealers from across the state tell her that large travel trailers and motor homes are the best sellers.

"People want more luxury," she said, "and the more expensive and more elaborately-furnished the home is, the better seller it is."

Among the luxuries in demand, Hunt said, are microwaves, ice-makers, blenders and color television sets. "They really want to turn their vehicles into luxury homes," she said.

Charles Miller, of R.O. Evans Homes in Dallas, a dealership specializing in super-luxury motor homes, said his dealership is selling luxury homes running in prices up to $150,000 each. "We are selling to older businessmen, retired or semi-retired, who buy mostly for luxury," he said.

And a spokeswoman for Starcraft, an RV dealership specializing in selling tent-trailers, said "we have been in the business for 14 years and our business keeps growing. This has been our best year."

Several RV dealers, however, expressed their concern that the RV market is narrowing and becoming "only for the rich, who can buy the large homes and who can buy the large cars."

Bennett said "It used to be that the average man was able to make the investment (in an RV) but now it seems that the rich are the only ones buying. In addition to the fact that they have the money and the leisure time, they are buying for tax benefits."

Bennett, who has been in the RV business since 1973, said it also concerns him that the margin of profit for dealers "is steadily declining because of high interest rates and because we are having to pay a lot of taxes."

Honda Santa Ana builds new quarters

SANTA ANA, Calif. — Honda Santa Ana has broken ground for a $1.5-million dealership on a three-acre site. Completion is scheduled for March.

The company, owned by Ron Jackson, was formed in 1963 as a Honda motorcycle dealership. It added Honda cars in 1970 and has handled only Honda autos since 1975.

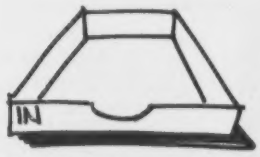
INTRODUCING A LEASING PROGRAM THAT MAKES LEASING WORTHWHILE. NEW HORIZONS FROM LYONS AUTO LEASE.

New Horizons is a name well worth remembering. Because when it comes to dealer lease financing programs, you won't find a better deal.

COUNT ON US FOR SHORT TURNAROUND.
We aim to give credit approvals in hours, not days. We fund your deals quickly, because we know the meaning of service.

NEW HORIZONS WON'T COST YOU A DIME.
With the New Horizons program from Lyons Auto Lease, you can offer your customers all the advantages of leasing without investing a dime or straining your bank credit line.

And we pay complete gross profit up-front on every car you lease through New Horizons.



WE'LL FREE YOU FROM PAPERWORK.
Our program helps your leasing run a lot smoother. We provide all the forms and handle all administrative work, including credit, collections, invoicing and providing computerized account reports.

With New Horizons, leasing has never been easier. Or more profitable.

846. Group 7 was up 19.1 percent to 4,615 vehicles, compared with 3,875 in the same month in 1982.

The nine-month heavy-truck count, however, was down 6.4 percent from a year ago, from 97,829 to 91,854.

Group 8 registrations in the January - September period totaled 55,372 units, an increase of 1.2 percent over the year-earlier 54,711. But the Group 7 was down 16 percent to 36,212 units, compared with 43,118 in 1982.

International boosted its lead over No. 2 Ford by more than 500 units in September and increased its nine-month total to 22,120 units, good for 24.15 percent of the industry count.

Ford's January-September tallies moved to 19,348 units, accounting for 21.13 percent of the total. A year ago, Ford was the industry leader with 23,220 registrations and accounted for 23.73 percent of the total.

Through September, International, Freightliner, Peterbilt, Volvo and Autocar were the only makes to increase both unit tallies and market share over last year.

Dealers lined up by Western Star

Continued from Page 10

are located west of the Mississippi and 23 to the east. A national parts distribution center is fully operational near Salt Lake City.

Kennedy explained that most dealers chose the Western Star line because they saw a need in their area for a truck that is hand - assembled to the user's exact specifications.

Once affiliated with White Motor Co. and later Volvo White Trucks, Western Star began independent operations March 1. The trucks are built in Canada.

Galvin honored

CHICAGO. — Loyola University has selected Robert W. Galvin, chairman and chief executive of Motorola, Inc., as the recipient of its Sword of Loyola award.

***For all the good reasons* you like Joe Muers so will your company.**

Probably, you like us best for our good food... prime sea food that's so fresh you can taste it.

For the same reason, your company will like meeting at Joe Muers, but there are others...

- ***Private Meeting Rooms*** available for business groups up to 60 at no added charge.
- ***Open or Custom Menu*** available for cocktail buffet, lunch, or dinner meetings with regular menu prices.
- ***Quiet Attention*** given to meeting planning and meal service to support meeting objectives.
- ***Convenient Location*** near the Chrysler/Fisher interchange puts most offices 5 to 25 minutes away.
- ***Free Valet Parking*** saves time.

There are lots of good reasons to meet at Joe Muers. Call *Tim Kelly* or *Joe, Tom* or *Mary Ann Muer* at *567-1088* to help you plan your next conference.

THERE ARE MANY PLACES TO MEET IN DETROIT BUT THERE'S ONLY ONE JOE MUERS WITH 30 DIFFERENT KINDS OF SEA FOOD

But outlook is no better than last Congress

Makers seek Clean Air changes

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The domestic auto industry has presented its "wish last" for changes in the Clean Air Act to the Senate Environmental Committee. Aftermarket associations also gave their views.

But even though Committee Chairman Robert Stafford, Vermont Republican, hopes to report a bill to the floor by next March, the outlook is no more sanguine this Congress than it was the last when the Senate succeeded in getting a bill out of committee but did not get any floor action.

Morever, there has been no movement at all in the Democratic-controlled House where California Rep. Henry Waxman, who chairs the House subcommittee, prefers to wait for Senate action.

The law has not been changed since the major upheaval of 1977 when requirements for cars and trucks were set in concrete and the companies declared they could not meet the standards. But with the help of waivers, money and effort, they have.

Since the manufacturers have done what they said could not be done, Congress is not thought likely to roll back the standards.

This is so even though the industry case — that controlling carbon monoxide at 7.0 grams per mile instead of 3.4 g/m or controlling nitrogen oxides at 1.5 g/m instead of 1.0 g/m is more cost effective and adequate for health reasons.

The industry's perceived history — often seen as one of "crying wolf" — also taints other requests.

Thus, when industry talks about definition of "useful life" and alternatives to recall because of inability to prevent deterioration of emission controls, considered the most troublesome and serious problems, Congress is not likely to act and the only recourse the companies may have is the courts.

But it is not only the industry's credibility problem that influences lawmakers, it is the recognition that their constituents care about the environment and want the laws enforced.

This was clearly shown when former EPA chief Anne Gorsuch Burford was forced to resign and when the first administrator, William Ruckelshaus, was invited back.

• But the situation has been complicated by the acid rain controversy. Smokestacks in the Midwest emit sulfur dioxide that is carried as acid rain into the Northeastern states and Canada, destroying life in the lakes. The problem is serious and there is no politically palatable solution.

Ruckelshaus, who once thought he might be able to get agreement, has now failed to find a consensus in the Cabinet, and the White House wants nothing to do with it.

The environmentalists are telling Stafford his bill of last year needs strengthening, but most lawmakers can sniff political mischief that may set one region of the country against another. As a result they prefer to rely on bills but may shy away from casting votes during an election year.

But the two — acid rain and stationary sources, and control of car and truck emissions — are in the same law and once one section is opened for change, the auto companies and the aftermarket groups have no choice but to present their positions and hope for the best.

The law has not been reauthorized and sooner or later, the money to enforce it may also be endangered. The lack of reauthorization, of course, does not affect the law directly; the law stays in effect.

Moreover, acid rain is affected not only by sulfur dioxide but also to a much smaller extent by nitrogen dioxide and that pollutant is also affected to a smaller extent by nitrogen oxides emitted by cars and trucks.

This means that even though the companies feel they have more than done their share in controlling mobile sources for NOx, some lawmakers, including both Stafford in his bill and Waxman in his, want tighter NOx controls, a special problem for diesels and their particulate pollution.

Recently, MVMA President V. J. Adduci and MVMA Technical Vice President Fred Bowditch explained the costs of get-

Check for $5,146,388 to be presented Dec. 9 — 11 years early

Chrysler to repay Delaware loan

DOVER, Del. — Chrysler Corp. will hand over a check for $5,146,388 to Delaware state officials Dec. 9, representing early repayment in full of principal and remaining interest on the state's 1980 loan to the auto maker.

Delaware was the first of several states to loan Chrysler money during its 1980 financial crisis and will be the first to get it back — 11 years early. Chrysler previously repaid $1.2 billion in loans guaranteed by the Federal Government.

"I am pleased to see Chrysler turn the situation around. Chrysler is a big employer in the state," Delaware State Treasurer Janet Rzewnicki told Automotive News. "What's good for Chrysler is good for Delaware."

She said a ceremony is being arranged for state officials to receive the check from Chrysler officials, possibly at the Chrysler assembly plant in Newark, Del. The Newark plant employs approximately 3,600 persons.

Rzewnicki was advised Nov. 7 by Thomas Metevier, Chrysler's director of local government and community affairs, of the company's intention of early repayment.

The payment will include the $5 million loan principal and remaining interest of $146,388 to Dec. 9. Chrysler has previously paid $2.5 million interest on the Delaware loan, Rzewnicki said.

Chrysler also borrowed money from the state governments of Michigan, Illinois and Indiana during its financial crunch. Rzewnicki said Metevier did not indicate when those loans might be repaid, but "I would think they will want to pay them back, too, because the loans are at high interest rates," she said.

"Delaware's loan was at 15.5 percent interest but had been scheduled to be readjusted to the New York discount rate plus 2.5 percent, or approximately 11 percent, Rzewnicki said. Chrysler would have begun repaying the principal on its Delaware loan next June 30, with the final payment due in 1994.

• "We were the first one to come to Chrysler's aid and the only state to take funds out of our General Fund — our operating money," Rzewnicki said.

"The other states made their loans out of capital funds. In effect, we took the money out of our checking account and they took it out of their savings accounts."

Officials of Delaware, itself financially strapped this year, are already maneuvering for the money from the Chrysler repayment.

Some want to use it to give a pay raise to state employes, who received no increase in this year's state budget for the first time in five years. Others want to use it for an increase for state pensioners, and still others have designs on the funds for other state programs.

Rep. Edward J. Bennett, Dover Democrat, and chairman of the legislature's Joint Finance Committee, said he favors a salary adjustment for state workers, possibly a one-time increase or a one-step increase in pay grades.

"This is a one-time loan repayment," Rzewnicki said. "If we end up giving a pay raise, there is no funding source in the years to come."

U.S. jury indicts bumper recyclers for price fixing

TRENTON, N. J. — A federal grand jury here returned a felonly indictment charging five corporations and five individuals with conspiring to fix prices for reconditioned automobile bumpers in the Northern New Jersey-metropolitan New York area.

Attorney General William French Smith said the indictment which charged a violation of Section 1 of the Sherman Act, was filed in the U. S. District Court.

Named as defendants in the indictment were: Keystone Automotive Plating Corp., Pomona, Calif.; Bumper Service of Newark, Inc., Newark, N. J.; JR Taylor, Inc., Mobile, Ala.; Husslein Auto Body Supplies, Inc., Hempstead, N. Y., and Auto Bumpers, Inc., Clifton, N. J.

Also, Alphonse Ronco, vice president of Keystone Automotive Plating; Charles A. Taylor, former secretary and part owner of Bumper Service of Newark and JR Taylor; Jack R. Taylor, former president and part owner of Bumper Service of Newark and current president and owner of JR Taylor; Ludwig Husslein Jr., president and owner of Husslein Auto Body Supplies, and Paul Stillwaggon, former president and part owner of Auto Bumpers.

William F. Baxter, assistant attorney general in charge of the Antitrust Division, said the indictment charged that the defendants engaged in a continuing conspiracy to raise and fix prices for reconditioned automobile bumpers from at least May or June, 1979, until at least September, 1980.

During the conspiracy, the defendants and their affiliates were the major manufacturers and sellers of reconditioned bumpers in the specified area. Sales of bumpers by the defendants were about $6 million, according to Baxter.

Auto distribution center under way in Louisiana

ST. LOUIS. — Union Pacific System is building an automobile distribution center on its Missouri Pacific Railroad west of Shreveport, La.

Work began in September on the distribution center, which will be paved, fenced and lighted. The project should be completed by February.

N-car to be priced between A and J

Sanchez outlines Oldsmobile plans

Continued from Page 2

to stay competitive," Sanchez said. "In the future there will be specific doors, specific uppers."

8. There will be no Oldsmobile rear-wheel-drive cars by the end of the decade. Most vehicles will be front-wheel-drive by the 1988-89 model years. Only the station wagon will continue to be rear-wheel drive until the end of the decade.

9. Oldsmobile has no plans to discontinue the diesel engines. The V-6 diesel will be offered on the 1985 C-cars.

Oldsmobile is attempting to sell more diesels by cutting the price of the V-6 by $300 and the V-8 by $400 this model year to make them more competitive with the gasoline engines, he said. In addition, there are incentives for Oldsmobile sales personnel.

Sanchez said he wants diesel sales to improve because the plant is currently running at 15 percent capacity, GM needs the engines to meet CAFE standards and there is a future for the diesel, especially since another energy crisis is a very real possibility.

10. He expects the GM-Toyota deal to be approved but there are no plans for Oldsmobile to get one of those models in the next five years. He also said Oldsmobile would like to have a T-type model (like Buick), but that is also not in the plans for the next three to five years. Adding those models to the Oldsmobile line in the future will depend on the marketplace, he said.

11. Dealers selling for $49 over sticker are using a "short-sighted" method to improve cash flow or more inventory. He said it is "a short-term solution for the next six, eight, nine months, but as soon as we are able to build up our supply to meet that demand, it is no solution at all."

Some dealers selling at $49 over sticker have complained they can't get enough cars to fill their orders. According to Sanchez, it is Oldsmobile policy to fill sold orders first before stock orders, but the sold orders are distributed depending on a dealer's sales history. Often, the dealers selling at $49 over are the smaller dealers, he said.

• "Our policy is to distribute cars as evenly as we can," Sanchez said. "Every dealer in the country is saying they aren't getting enough cars. Part of their problem (dealers selling at $49 over) is, I think, that they have a very serious inferiority complex. They have to explain to a customer why they took an order knowing the car was not on order. It is very easy to transfer blame to the factory.

"The other dealers, I assume, know how many cars they are going to receive and they stay within that sales ratio. What happens at a time of short inventories is that the small dealer who has generated very little volume always screams bloody murder because he's never getting enough cars and he thinks we are treating him differently than anybody else.

"The big dealer who would like to sell 500 cars but is getting only 400 complains, but he doesn't do it publicly," Sanchez said. "He's a big dealer and he understands the prestige that he has within the organization. He feels certain of himself and doesn't feel prejudice if he receives 20 percent fewer cars than he orders.

"The little dealer who used to sell 20, now wants 40 and is only getting 32. He thinks we are picking on him because he's small. Our policy is to deliver cars to every dealer in line with the volume they generated with the sales history," he said.

Sanchez said Oldsmobile has no plans to try to stop dealers from selling at $49 over sticker, but he warned that "it is a very advantageous system at a time when demand is high and product is low, but when the situation becomes competitive and there is enough product around the country to satisfy demand, a dealer that sells strictly on the basis of price is not a dealer that has any kind of future."

• Sanchez again stressed that Oldsmobile would like to take the number two sales spot from Ford Division for the 1984 model year.

"Our objective is to be in second place this model year," he said, "but if I had to bet on it with my money, I'd want very small odds because it would be the first time ever. It is an objective that has been accepted, not only by our wholesale organization, but by our dealer organization."

According to Sanchez, Oldsmobile led the race this calendar year through June 20 and topped Ford Division in October, the first full month of the 1984 model year.

For the middle 10 days of November Oldsmobile beat Ford by 3,397 units, leaving Oldsmobile ahead by over 4,000 units for the '84 model year.

For the calendar year, Ford Division tops Oldsmobile by 21,183 units.

While Sanchez believes Ford is the competition, not sister divisions, he said "falling into fourth place behind a sister division is as bad as falling into fourth place behind Chrysler, which was also in the cards many years ago." Buick currently holds fourth place.

Ford Oldsmobile to overtake Ford for second place will not be accomplished by increasing C-car sales but by continuing to improve Cutlass Ciera sales by 40 percent in 1984 and by "getting the Firenza up another quantum jump of 80 to 100 percent from the low level we achieved in 1982." In 1982, Oldsmobile sold 28,282 Firenzas.

New Maepsy-Na hikes sales for GM partner in Korea

SEOUL, Korea.—Daewoo Motor Co., a 50-50 joint venture with General Motors, has exceeded its 1983 sales forecast for Korea's small-car market, according to the Daewoo Group.

Due to sales of the Maepsy-Na, a new model introduced in September, the company seized 42 percent of Korea's domestic small-car market in October, up from a 19 percent share in the year-ago month.

Daewoo's small-car market share for the first six months of 1982 was 6.9 percent.

Daewoo's share of the market rose in the first half of 1983, to 24.4 percent, and then leaped to its October share of 42 percent. The company's total sales for October came to 4,640 units, including 1,951 Maepsy-Nas.

Daewoo President M. K. Choi expects continuing increases in Korean sales of the new model. "The Maepsy-Na," he said, "has a number of timely, popular advantages over its competitors."

He said that the Maepsy-Na is equipped with coil-spring suspension in both front and rear, unlike other models, which are outfitted with rougher-riding leaf springs in the rear.

"Perhaps the most important factor," said Choi, "is the greater safety afforded by the new model's body design."

Many of the cars sold by Daewoo's competition have been used as taxis, and Choi feels that this, too, works to the advantage of the new vehicle.

"More and more people in Korea are becoming drivers," he said, "and I don't think new drivers are going to want to drive cars that look like the taxis they used to ride in."

The Maepsy-Na has a sticker of $5,800.

Daewoo Motor Co. reported a net profit of $1.4 million for the first six months of 1983 on sales of $180 million, up 58 percent over the same period in 1982.

Mitsubishi opens new parts center

FOUNTAIN VALLEY, Calif.—Mitsubishi Motor Sales of America has opened its Western Distribution Center in Cypress, Calif., according to Daniel McNamara, vice president - corporate parts.

The 14,000-unit inventory includes all parts needed to service Mitsubishi's lineup of cars and trucks. Designed primarily as a distribution center for the Western region, the facility is tied into MMSA's national computer network and is capable of providing overnight delivery of parts and accessories to any of the 75 U. S. dealers.

Seated safely

Nissan will offer this child safety seat through its nearly 1,100 U. S. dealerships. It plans to sell 13,000 the first year. A free stuffed animal will be given away with each seat purchased through Jan. 31.

Ford sees new impetus toward world car concept

Continued from Page 1

ations into a single unit, as General Motors did with its Worldwide Truck and Bus Group, Lutz said. But the three Ford truck operations have been encouraged to work very closely in development.

"We are very encouraged by their progress," he said.

The Spanish-produced Fiesta was the first European or American-made car of that size to be profitably produced, Lutz said. Spain still ranks with Germany and Belgium among Ford's most productive operations, he said.

The least profitable operations for Ford have been in Great Britain, although some plants there have made great absolute gains. Some British components plants, such as the Bridgend (Wales) engine plant, are among the company's most efficient, Lutz said.

There has been no decision as to the fate of Ford's small Cork (Ireland) assembly plant, although, "We do have to study the viability of plants that size," he said.

Ford has been investing an average of $1 billion a year in its international operations and has made money on its overseas operations every year since 1948, Lutz said.

He said he expects Ford International to continue to be one of the largest contributors to the company's profitability.

• Ford is using only 81 percent of its capacity in Europe, so expansion there is "highly improbable," Lutz said.

One of the reasons is that the Japanese now take about 10 percent of the European market—equivalent to about one million units or five assembly plants, Lutz said.

To contain the Japanese in Europe, Ford has become highly competitive in product, price and manufacturing technology—each of which erodes profits, he said.

One of the reasons that Ford's German workers agreed to allow Ford to ship cars to Scandinavia from Brazil was that they recognized that those sales otherwise would be lost to the Japanese in Scandinavia's unrestricted markets, he said.

About 10 percent of Ford's European products have been sourced outside Europe, Lutz said' "but that is bound to grow."

Asked about any impact of the political unrest in Cyprus on Ford's Turkish joint venture, Lutz said the effect has been minimal.

"Turkey has stabilized well over the past three to four years," he said.

A skeleton crew is maintaining Ford's plant in Alexandria, Egypt, while Ford is negotiating with the government "on a mutually economical way to operate that plant," he said.

Bait-and-switch complaints spur action in N. J.

Continued from Page 1

comment before a new regulation takes effect.

The complaints received by Consumer Affairs, a division of the state Attorney General's Office, involve dealers throughout the state and are not centered in any one geographical area. Barry could not give a precise number of dealers who have complaints against them, though a spokesman for the division said nearly every dealer in the state has complaints filed against them. According to NADA figures, there are 737 franchised auto dealers in the state.

While the division would not reveal any names of dealers, the complaints are investigated and there is a possibility of legal action.

Barry stressed the dvision's goal was to stop illicit practices in advertising and business.

obituaries

Richard E. Anderson

POMPANO BEACH, Fla. — Richard E. Anderson, 57, senior vice-president of Zimmer Corp. and president and founder of Windsor Mobile Homes, Inc., a subsidiary, died Nov. 20 at his home near Bristol, Ind.

Lewis E. Fleuelling

MONROE, Mich. — Lewis E. Fleuelling, who served Monroe Auto Equipment Co. for 33 years in engineering, marketing and executive positions, died Nov. 14. Mr. Fleuelling joined Monroe in 1947 as a project engineer. He was named senior vice president in 1978.

Peter D. Roto

ARLINGTON HEIGHTS, Ill. — Peter D. Roto, 81, founder of Roto Lincoln-Mercury-Subaru-IVECO, Inc. here, died Oct. 29. He opened a Hudson dealership in Chicago in 1925.

C. P. (Jack) Williams

SAN DIEGO, Calif. — C. P. (Jack) Williams, 82, for many years an automotive service consultant, died Nov. 11. Beginning as a mechanic, Mr. Williams became a car dealer before beginning his consultant business. The men he trained in auto service formed the Jack Williams Service Council about five years ago to carry on his work. Mr. Williams himself remained active until earlier this year.

Year-to-date total 30 pct. ahead of 1982

98,598 cars built in three-day week

By Mary Beth Mayer
Staff Writer

With only three days of production last week due to the Thanksgiving holiday, domestic auto output fell 42.25 percent short of the previous week's five-day total.

The auto makers targeted 98,598 units last week, down from 170,732 the previous week but up 48.89 percent over the 66,224 assembled in the year-ago week, also shortened by the holiday.

Because of the holiday, some of the totals for the week ended Nov. 19 are estimated.

So far this year, the manufacturers have finished 6,116,305 cars, 30.76 percent more than the 4,677,782 assembled at this time last year.

Breakdown for last week by company was: General Motors, 57.63 percent; Ford Motor Co., 21.60 percent; Chrysler Corp., 15.09 percent; American Motors, 3.50 percent; Honda, 1.14 percent, and Volkswagen of America, 1.04 percent.

Ford had six car plants on daily overtime last week. They were: Chicago, Edison (N. J.), Kansas City, Lorain (O.), St. Louis and Wayne (Mich.).

Last week at Chrysler, the Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 points put in two 9-hour shifts on Monday and Tuesday and two 8-hour shifts on Wednesday.

The Chrysler Jefferson (Detroit) facility worked two 8½-hour shifts the first two days of the week and two 8-hour shifts on Wednesday. Finally, the St. Louis No. 2 plant worked one 10-hour shift three days last week.

All U. S. car facilities were idle last Thursday and Friday in observance of the Thanksgiving holiday.

Truck makers assemble 35,018 in holiday week

The holiday week pulled domestic truck production down 40.14 percent from the previous week's five-day total. All U. S. truck assembly points were idle last Thursday and Friday in observance of Thanksgiving.

Last week, the makers slated 35,018 trucks, down from the previous week's 58,499, but up 44.59 percent from 24,220 units built in the comparable 1982 period, also shortened by the holiday.

Because of the holiday, some of the totals for the week ended Nov. 19 are estimated.

So far this year, the manufacturers have completed 2,168,176 trucks, a 24.40 percent gain from last year's 1,742,983.

All six Ford facilities were on daily overtime schedules last week.

Car production steady in Canada; trucks decline

Last week's Canadian car production was targeted at 21,301, up 161 units from the previous week's 21,140 and 23.60 percent over the 17,235 built in the year-ago period.

So far this year, the manufacturers have completed 875,932 cars, leading the year-ago output of 773,121 by 13.30 percent.

Truck production last week was estimated at 14,561, a fall of 3.18 percent from the prior week's 15,038. It was nearly double the year-ago week's total of 7,311.

Year-to-date, there have been 494,347 trucks completed, up 10.73 percent from 446,481 finished at this time last year.

So far, there have been about 9,250 T-115 minivans built at Chrysler Corp.'s Windsor facility.

TV special to kick off drive for Harrah museum in Reno

RENO. — A two-hour television special which will kick off a fund-raising drive to establish a museum here for 300 cars from the William Harrah collection was taped here last week.

Called "Superstars and Classic Cars," the special is being syndicated for broadcast between Jan. 8-10, 1984. The show is sponsored by Chrysler Corp. with assistance from Time-Life, Inc., and was produced by Dick Clark Productions.

In addition to sponsoring the show, Chrysler donated two prototype vehicles to the William F. Harrah Foundation to be included in the collection.

Joseph Campana, Chrysler marketing vice president, said that the two vehicles, a Dodge Caravan and a Chrysler Laser, are hand-built prototypes with an estimated value of $250,000 each.

"These two new revolutionary concepts are part of an investment of over $1 billion by the New Chrysler Corp. to build fuel-efficient, high-technology cars at an affordable price," Campana said.

• The hand-crafted prototypes represent some 24,000 man-hours of construction. Life Magazine also donated $35,000 to the foundation, which is seeking to raise $10 million over the next several years which will go toward building a new museum for the collection in downtown Reno.

The television special, which will star Bill Cosby, Debbie Reynolds, John Davidson and Lisa Hartman (as well as cameo appearances by a number of other performers who have starred over the years at Harrah's Casino), was taped before a benefit audience of 1,500 who paid between $100 and $200 to see the show.

The benefit and related activities surrounding William F. Harrah Week here were expected to raise $500,000.

The 1,100-car collection is owned by Holiday Inns, which purchased the Harrah operation several years ago.

Three hundred of the vehicles have been donated to the Harrah Foundation, which was formed after Harrah's death in 1978 in order to preserve the collection. These are the cars which will be on display at the proposed museum.

Zahrte joins company

VIRGINIA BEACH, Va.—William Zahrte has joined Dealer Management Systems. He will be responsible for increasing sales volume and profits of dealers.

8 scholarships awarded in 4-H auto program

CHICAGO. — Eight young persons have been awarded $1,000 scholarships in the national 4-H automotive awards program.

Awards will be presented here today (Nov. 28) at the 62nd National 4-H Congress. They were sponsored by Firestone Tire & Rubber Co.

Winners are: Kevin Mullineaux, 18, Monrovia, Md.; Ted Sims III, 18, Clemson, S. C.; Dan Jensen, 17, Hampton, Neb.; Ross Sestak, 18, El Reno, Okla.; Rick Muterspaw, 19, Springboro, O.; John Carnes, 18, Monroe, N. C.; Jimmy Van Wagner, 17, Citra, Fla., and Rocky Sylvester, 18; Nashua, Mont.

Nearly 90,000 boys and girls participate in the national 4-H automotive program.

Renault's R-25

On sale in Europe next March

Renault plans to sell its R-25 in Europe next March. It will replace the R-20/30 big cars and will be offered with a choice of three gasoline engines and two diesels. It is 183 inches long and sits on a 107-inch wheelbase. Weights are 2,650 and 2,833 pounds. Renault officials said there are no plans to sell the car in the U. S. Story on Page 24. Other picture on Page 61.

Ford proposes four-year test of two million cars equipped with passive-restraint system

By Helen Kahn
and
Matt DeLorenzo

Ford Motor Co. is proposing a four-year, two-million-car test fleet for passive belt and/or air bags.

Ford also is proposing a radical change in test procedures for passive restraints, a mandate for all auto makers to equip 5 percent of their car fleets with passive systems and a concerted effort by all safety advocates to get states to pass mandatory belt-use laws.

Ford's recommendations were announced to Transportation Secretary Elizabeth Dole in hearings in Kansas City. The Kansas City meeting was the second in a series of three hearings on the merits of Safety Standard 208, which would require automatic crash protection in passenger cars.

Hearings were conducted earlier in Los Angeles and will conclude this week in Washington. NHTSA Administrator Diana Steed conducted the Los Angeles hearings.

In Kansas City, Ford Vice President Helen O. Petraukus acknowledged Ford's plan for the two-million-car test would need "extraordinary leadership" from government, a "substantial commitment of resources from makers," and a "willingness" from all to admit that belt usage is central to protecting car occupants.

What Petraukas failed to mention is that air-bag advocates will scream about further delay, saying that air bags have been tested and proved over the years. They will also protest vigorously any downgrading of the test procedure to stretch and pull for belts and any weakening of air-bag testing.

Sister auto makers may also not be enthusiastic about being forced into another test fleet—after the one planned by former Secretary William T. Coleman in December, 1976, for a half-million cars failed to get off the ground with a change in Administration.

• The Reagan Administration—the strongest advocate in many a year of laissez-faire and states' freedom to act on their own—may well not embrace the idea of jawboning states to force motorists to buckle up.

But precisely because the Ford plan is guaranteed to make all parties angry, it may be the most positive proposal to come out of the three-days of hearings, following the Supreme Court's remand last June. Even so, were the Ford plan adopted, it also might face a legal test.

Ford's position is that before Americans spend billions, they must be "certain" that air bags are effective and that automatic belts will not be "bypassed or permanently disabled." But since active belts are in all cars, a way must also be found to achieve their benefits.

"Forcing" passive restraint on motorists without assurance they will be accepted could mean a "major and possible unrecoverable setback" for the cause of safety and it might even cause "grave economic dislocation" for the industry.

What Ford also wants is to substitute a full crash test with instrumentation for a mere static test or "stretch and pull" for passive belt systems and a "designed to conform" procedure with a limited test for air bags.

• Ford also wants an industrywide rule — to get "valid" answers to questions, where at present there is only limited

Formal approval could come before Christmas

FTC staff urges OK for GM-Toyota

WASHINGTON. — The Federal Trade Commission's Bureau of Competition has recommended that the FTC give its approval to the General Motors-Toyota joint auto production venture.

And the commissioners usually follow the recommendations of their staff. Formal approval could come before Christmas.

FTC approval is the last obstacle to the agreement between GM and Toyota to build 200,000 subcompact cars of Toyota design in GM's unused assembly plant in Fremont, Calif.

In addition to the 200-page Bureau of Competition report, FTC commissioners will also receive a 900-page neutral analysis from its Bureau of Economics and an independent opinion from John Kwoka, a former FTC economist now teaching at George Washington University, which finds the proposal anticompetitive.

Tentatively scheduled to present their opposing views next week are representatives from Chrysler Corp., Ford Motor Co. and American Motors.

If the FTC allows the joint venture to go through, it appears likely that a suit will be filed by Ford and Chrysler, possibly joined by AMC.

• Speculation is that the commission will split three to two in favor of the venture, with the Reagan Administration appointees outvoting former Democratic Chairman Michael Pertschuk and liberal Republican Patricia Bailey, who are expected to oppose the plan.

Clarence Ditlow III said he is trying to raise money to pay a law firm to challenge participation of FTC Chairman James C. Miller III in the vote on grounds that his acceptance of more than $75,000 in fees from GM before he joined FTC should disqualify him.

Miller has said he will not recuse himself from the decision. Even if he did, a tie vote would be the likely outcome and a tie vote would allow the venture to go through. Commissioners Terry Calvani and George Douglas are expected to vote for approval.

Approval of the proposal would allow GM, the world's largest auto maker, and Toyota, the third largest in the world and the biggest importer of cars to the U. S., to exchange marketing data.

The FTC staff report did find potentially troubling problems in the deal and proposed that the venture be closely monitored. But, it concluded that there is not sufficient evidence for FTC to challenge the legality of the venture at this point.

Ford and Chrysler contend that the joint venture could have a wide variety of anticompetitive effects, including possible price collusion and exchange of future product plans.

The FTC staff report said that instead of trying to block

breaking news

Toyota to import van as a commercial

LOS ANGELES.—Toyota Motor Sales, U.S.A., will offer a commercial version of its van in early 1984. While current van models are imported under the passenger-car quotas the commercial versions will be brought in as trucks and therefore will be subject to the 25-percent truck tariff. Toyota feels there is sufficient demand among fleets and van upfitters to justify the move. The number of commercial vans will not be restricted, while passenger vans under quota are limited to 3,000 a month.

Ford to recall 1,200 workers next year

DEARBORN.—Ford Motor Co. will add a second shift to its Atlanta assembly plant next year returning 1,200 workers to the job. Most of those employes are expected to

And it could be even better, he says, if Washington would clean up its act

GM's Smith predicts '84 sales of 14 million

By Al Fleming
Industry Editor

Roger B. Smith, chairman of General Motors, forecasts sales of new cars and trucks in calendar year 1984 will total 14 million units, and could "easily beat" that mark "if we get the things needed in Washington in terms of a stable economy and handling of the budget deficit."

Interviewed for Forecast '84, a special section of Automotive News that will run the Smith interview in its entirety next Monday (Dec. 12), the GM chairman also said that:

1. The company's capital spending programs in 1984 and possibly 1985 will be higher than in 1983 because of "some new, ambitious programs that we're undertaking."

2. He believes there will be a 20-million vehicle sales year in the U. S. by the 1990s (compared to the current record of 14.9 million units set in 1978).

3. By the 1990s there will be a labor shortage in the U. S., as a result of unprecedented economic growth and technological breakthroughs that will spawn new industries.

Looking toward the near term, Smith said GM's first-quarter 1984 production schedules will reflect the company's optimism as it heads into the new year.

"We've got every possible plant back (in production) that we can have back. We have two brand new assembly plants (in Lake Orion, Mich., and Wentzville, Mo.) on stream Dec. 1, so the (production increase over first-quarter 1983) will be substantial," he said.

A major hurdle facing GM next year will be new-contract bargaining with the UAW. Their current national agreement expires Sept. 14.

Smith listed "job security" as the issue he believes will be of "paramount importance" in the talks. He said he expects bargaining will focus on "how we work together with the union and our people to make sure we're competitive, and have good jobs for them."

In discussing recent organizational changes among GM staffs and divisions, Smith said the

Federal judge's ruling sets a trial for Jan. 1

GM loses a move on X-car debate

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — General Motors has lost a major procedural move in the continuing litigation over whether some 1.1 million X-body cars have a safety-related defect.

GM denies it and the government — using GM's own internal documents — says the defect exists and GM knew about it. Trial on the defect issue itself is set for Jan. 1.

GM has contended that the federal court cannot act until NHTSA has itself gone beyond its current initial finding of defect and reached a final determination of defect after having given GM its full rights to defend itself.

The government counters it saved time by going directly to court where GM is guaranteed a trial.

Federal Judge Thomas P. Jackson, in a six-page decision last week, notes that GM's concept of the law seems to be that the government is the "exclusive (or at least the primary) arbiter" of vehicle safety but the court agrees with the government when it says that manufacturers have an "independent duty" to notify owners and to remedy safety-related defects — "with or without a Secretary's order to that effect . . . and a manufacturer who fails in it is in violation of the Act."

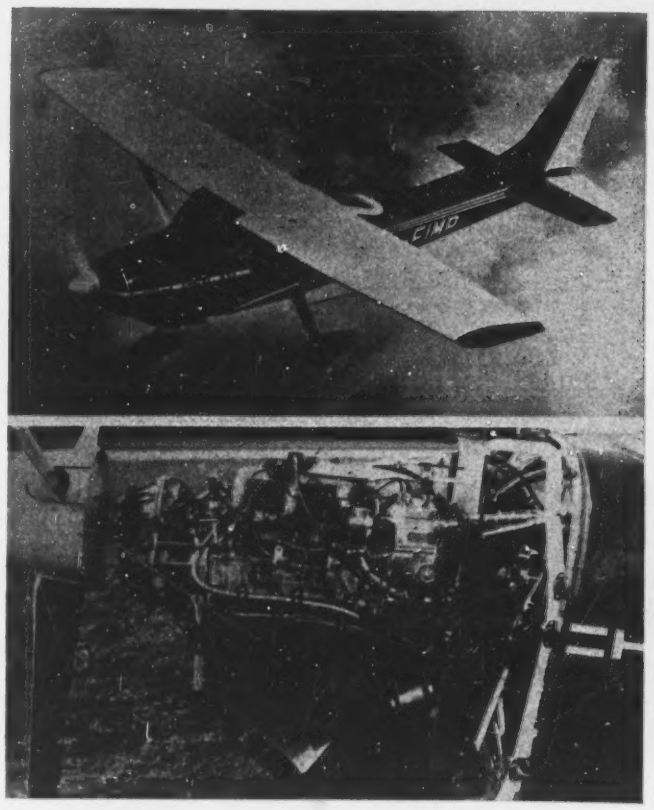
Moreover, says Judge Jackson, the government is obliged to tell the Attorney General when it knows of noncompliance by an auto maker without conditions of time or the status of its administrative proceedings.

Jackson, denying one of the two major GM motions, finds no reason for the case not to go to trial, since NHTSA has nothing ongoing at the present. As for GM's contention that some government charges are themselves defective — that GM breached its duty by failing to make a "good faith" finding of a safety-related defect — Jackson says "it would make no sense to construe it to allow a manufacturer to evade the duty by the expedient of declining, however innocently, to reach its own conclusions as to the relationship between a defect in its vehicles and the safety of the traveling public."

GM has consistently and repeatedly declared that the company never found a safety-related defect in the X-body brakes and that the government has misread more than 100,000 GM documents detailing engineers and some corporate executives' concern over unsolved brake "problems."

In fact, a footnote in a GM filing in court on Nov. 20 indicates the irrelevancy of various documents on the opinion of any GM workers other than two officials.

The footnote says: "Under well-established GM corporate procedures, only the Vice President and Group Executive for North American passenger cars, or in his absence the President of GM, is authorized to determine whether a safety-related defect exists."



Porsche takes to the sky

Porsche is developing its 911 engine for aviation use. Introduced with the 911 sports car in 1963 and still powering the 911 Carrera, the air-cooled "boxer" six combines high output with quiet and simple operation. Unlike other airplane engines, it is designed to run on regular-grade automotive gasoline. The Porsche PFM 3200 is the culmination of a two-year development program. Flight testing began in September and certification is expected by mid-1984.

German merger rumor links BMW and MAN

By Richard Feast
European Editor

LONDON. — Now this is just idle speculation — or is it?

In West Germany lately there has been a lot of talk of a merger between up-market auto maker BMW and troubled heavy truck specialist MAN.

The fact that BMW's success has continued through the recent economic slump and that MAN's fortunes have seldom been at a lower ebb is only part of the story.

Both companies are located in Bavaria, the southern German state. The strong regional sense which Bavarians feel should not be under-estimated. It was underlined by the rejection by Minister President Franz-Josef Strauss of suggestions that companies as diverse as Mitsubishi and General Motors could come to the aid of MAN.

That would not be a Bavarian solution. But a merger of some sorts between MAN and BMW, with financial aid from the regional government, would create an organization more capable of matching the might of Daimler-Benz, located to the northwest in the Baden-Wurttemberg capital of Stuttgart.

• If a merger happened it would be BMW returning a favor to MAN. In the '60s, when the auto maker was in troubles of its own, its aero engine interests were acquired by MAN. Now that company, known as MTU, is jointly owned by Daimler-Benz and MAN.

Last year, BMW made a record 369,000 autos. It will build even more this year and talks of reaching 400,000 next year. It can look back on a solid decade of growth, and look forward to a new R and D center being built at Munich and an additional factory under construction at Regensberg (also in Bavaria).

MAN built 21,500 vehicles last year — a reflection of the downturn in the market, and around 20 percent down on the numbers of the previous few years.

It made a financial loss last year ($125 million) on lower sales, and has cut its workforce (by a quarter, to 16,000 by the middle of next year). There have been factory closures and short-time working.

• The culmination was a change of top management in early November at MAN's parent GHH Group, Europe's largest engineering concern. It was occasioned by the troubles at MAN.

The new chief executive is Klaus Gotte, a financial expert from the Allianz Insurance Group. He replaces Manfred Lennings following a top-level shakeup at GHH over policy toward MAN.

One other small factor: The R and D director BMW chose to replace, Dr. Karlheinb Radermacher, is Dr. Hans Hagen— former development head at MAN.

He defends delay in ad campaign

Bricklin launches fat cash incentive

By John A. Russell
New York Staff Writer

NEW YORK. — A sales-incentive program with cash awards that could reach $890,000 has been kicked off by International Automobile Importers on Bertone X-1/9 and Pininfarina Spider cars in this country.

Malcolm Bricklin, chairman of IAI, explained the program is designed to spark sales efforts in the 100-plus dealerships that are in the IAI fold.

Cash bonuses for each sale are a key to the program. For each 1983 Bertone sold during the period running from Nov. 1 to Feb. 29, the salesman will receive $400 and the sales manager $150. For each 1983 Pininfarina sold, the sales persons will receive $100 and the sales manager will receive $50.

In addition to the cash bonuses, the salesman, sales manager and dealer become eligible for a series of drawings to be followed by a "Grand Drawing."

• At the end of three sales periods, or every month, there will be a drawing of sales coupons. The first-place winner, the dealer, sales manager and sales person, receive $5,000 each. Second place is $2,500 each and third place is $1,000 each.

The final "Grand Drawing" of all coupons during the four-month contest has a first prize of $25,000 for the dealer, and $15,000 for the sales manager and sales person. Second prize is $12,500 for the dealer and $7,500 each for the sales manager and sales person. The third prize is $10,000 for the dealer and $5,000 each for the sales manager and the sales person.

Bricklin said the purpose of the cash awards and the drawings was to attract attention of dealership personnel. There are only about 1,000 of the two cars in the country and '84 models are expected in March. But, he said, many of the new dealers are not familiar with the product. This is a method to draw their attention to the line and get enthusiastic support for it, he said.

Bricklin said the cash bonuses, once verification from the distributor are received are mailed "promptly."

• In the past several months, questions have developed about "aggressive dealer recruitment techniques, lack of a marketing/advertising program and the company's financial integrity.

Bricklin, in an interview, admitted aggressive recruitment

Its aim is to give Chevrolet truck leadership for 1983

GM pay-deferral program finds no followers

By Joseph Bohn
Marketing Editor

General Motors' competitors decided not to counter its three-month consumer payment deferral program, kicked off by GMAC over the Thanksgiving weekend.

The low-cost GM program got mixed reviews from competitors on its ability to stir up sales and traffic.

Essentially, though, Ford, Chrysler and American Motors already had a variety of incentives in place — and, nearing the yearend, some of their budgets are also hitting tilt.

The real significance of GMAC's program lies more in its attempt to give Chevrolet calendar year truck leadership than in seeking to boost sales of the troubled T and X-body models.

Chevrolet threw in extra incentive money as a companion to GMAC's own efforts.

From Nov. 24 to Jan. 4, sales people earn $75 per retail delivery and sales managers $25 on the following new vehicles: Chevette, Citation, S-10 pickups, S-10 Blazer, 2WD and 4WD pickups in the 10 and 20 series.

The full-size Blazer and 2WD and 4WD Suburbans are excluded from the contest.

• Ford is smarting a bit over the fact that registrations for the '83 model year, which concluded in September, show Chevrolet trailing it by 10,000.

Some Ford people think registrations — not retail sales — are the real indicator of who won the '83 model truck competition.

Of course, they also concede that there is always a delay in getting vehicles registered and Oklahoma, for example, isn't counted in the Polk tally.

The controversy, which will probably spill over into the new year, no doubt adds a little spice to marketers on both sides.

Chevrolet's general marketing manager, Thomas Staudt, openly expressed his division's strong desire to get calendar year truck leadership in his dealer mailgrams.

The money currently being spent by Chevrolet and Ford to bolster sales is pretty close to even.

Fiberglass composites on the rise

Dramatic growth forecast for body panels, springs

The growth of fiberglass-reinforced thermoset composites indicates they are no novelty to automotive engineers. They are routinely specified in many automotive applications. But some components recently introduced, such as exterior body panels and springs, are expected to show dramatic growth over the next five years.

According to W. P. Jenks, vice president of Owens-Corning Fiberglas Corp., "We expect thermoset composites to reach a volume of 307 million pounds by 1988. This represents a compounded annual growth rate of 12.2 percent, almost double the expected growth rate (6.6 percent) forecast for automobile and truck production."

Passenger car use of glass fiber composites is growing more rapidly than truck usage. In 1982 passenger cars used 91 million pounds, 59.3 percent of the 154 million pound total. Passenger car share will rise to 64 percent of the projected 1983 composites total, and reach 67 percent by 1988, when passenger car usage will be 206 million and trucks will consume 101 million pounds, according to Jenks.

One dramatic growth area O-C sees for composites in passenger car and truck production is the "suspension, chassis, and frame" category, where growth rate is expected to be triggered by increasing use of glass reinforced composites in springs. Front and rear composite leaf springs are currently in full production on the Chevrolet Corvette. Springs for trucks are forecast to grow at a faster rate than those in passenger cars. The 1982 volume of 894 thousand pounds is forecast to grow to 11.5 million pounds in 1988. Of this, 9 million pounds will be in leaf spring applications.

Body panels represented 73 percent of the 1982 passenger car composite applications and will improve this dominant position to 83 percent in 1988, with the growth coming in new applications, O-C says. Front end panels (grill opening panels) are currently the highest volume application in body panels. Although front ends will continue to grow, they will represent only 34 percent of the total body panel usage by 1988, down from 54 percent in 1982. Rear end panels, similar in purpose and design to grill opening panels, are being used on one

Photo

Glass fibers manufactured by the flame-attenuated process are used on automobile insulation products made by Manville (Story Page D-2).

This headliner, produced by Manville's Automotive Products Dept. at Defiance, O. for Chrysler's T-115 van, is the largest single-piece fiberglass headliner ever manufactured. It is 100 inches long, 48 inches wide and ¾ inch thick.

Noise, heat and Chapter 11

Manville marches on as auto supplier

Lots of noise. Lots of heat.

Manville Corp. is battling that as a company, and as a supplier of automotive products.

Since August 1982, the firm, headquartered in Denver, Colo., has been operating under Chapter 11 of the U. S. Bankruptcy Code. Its problem was precipitated by persons seeking damages for injuries alleged to have resulted from exposure to asbestos fiber or asbestos-containing products made or sold by the company and its subsidiaries.

Meantime, Manville is trying to operate its business in a normal manner, including manufacturing and selling automotive fiberglass products.

The company has been a leading supplier of automotive insulating components for two decades, and some 80 percent of molded fiberglass going into new cars for thermal and insulating applications reportedly is supplied by Manville.

"The message we want to communicate is that Manville dominates the fiberglass insulation and thermal market," said George A. Ensign, vice president and general manager, OEM Industrial Products Marketing Division, Manville Products Corp.

As for Chapter 11, Ensign said the company has maintained operational control of its business, and that its automotive customers, for some of whom Manville is a single-source supplier, show no evidence of losing confidence in the firm. "We're looking at new automotive programs far down the road," Ensign said.

Competitors are looking over Manville's shoulders, however, including Owens-Corning Fiberglas Corp., Toledo, and Certainteed Corp.'s Insulation Group, Valley Forge, Pa., whose sights are set on expanding their share of the market for fiberglass used in auto headliners and hoodliners.

Acknowledged Ensign: "It's a critical time for Manville. We've held an established position in the market since the early 1960s. We've dominated it, but in the last couple years other manufacturers are jumping in."

The battle is being waged over an automotive noise and thermal insulation market currently estimated at 30 to 35 million pounds of molded fiberglass product annually, and

Continued on Page D-8

Fiberglass

Continued from Page D-1

model. Installation on additional models will start in 1984 and will result in a 1988 rear end panel volume of 10 million pounds.

Three 1984 utility vehicles, AMC Jeep Wagoneer, Dodge Ramcharger and Ford Bronco II, use SMC liftgates. These are high volume closure applications. Production volume for these utility vehicles is expected to exceed that of low volume passenger car models. The use of liftgates will increase from a half million pounds in 1982 to 1.3 million pounds in 1983 and 3.5 million pounds in 1984, O-C says. Liftgates are expected to gain another 88 percent (to 6.5 million pounds) by 1988. Pickup tailgates will add 1.3 million pounds to the 1988 truck total.

A notable application in passenger car tailgates was on the 1983 Oldsmobile B-body station wagon. It has been added to the 1984 Buick Electra and LeSabre station wagons.

In passenger car use, three application categories, "body panels," "suspension, chassis, and frame" and "passenger compartment" account for most of the growth through 1988. In trucks, "cab shells and exterior" and "suspension, chassis, and frame" are the two outstanding growth categories.

Other reinforced composite application categories, such as electrical and underhood components, will grow at rates close to the car and truck production growth rate. "This indicates the maturity of composites in these areas," says Jenks. "Body panels and structural applications, such as springs, will provide the major growth direction for composites to and beyond 1988."

An analysis of glass fiber thermoset composite usage by manufacturing process discloses some significant changes over the 1982-1988 period.

Compression molded thermosets in passenger cars will increase 91 percent between 1982 and 1988 (77,527,000 pounds to 148,250,000), but their share of the total automobile use will drop from 85 to 72 percent, O-C says. This is due, in part, to the increased use of RRIM (reinforced reaction injection molded urethane). From a 1982 base of 883 thousand pounds, RRIM in passenger cars will grow to over 25 million pounds, 12 percent of the passenger car thermoset use, in 1988.

• RRIM is a relatively new system in automotive composites. Starting with a single application in 1982, 1983 production will exceed four million pounds.

The 1984 Pontiac Fiero uses RRIM in fenders and outer door panels, as well as front fascia. The Chevrolet Corvette has RRIM front and rear fascia panels.

Glass fibers provide dimensional stability by reducing the thermal expansion that can cause panel fit to deteriorate in extreme temperature conditions.

In trucks, compression molding will grow 30 percent from 1982 to 1988, but will drop from 87 percent to 70 percent of the total truck thermoset composite use. This is due to major growth in filament wound springs. Filament winding, forecast to use 11.5 million pounds, will comprise 11 percent of the truck thermosets in 1988. Injection molding and low pressure processes will remain at 5 percent and 14 percent of the total throughout the forecast period, O-C says. □

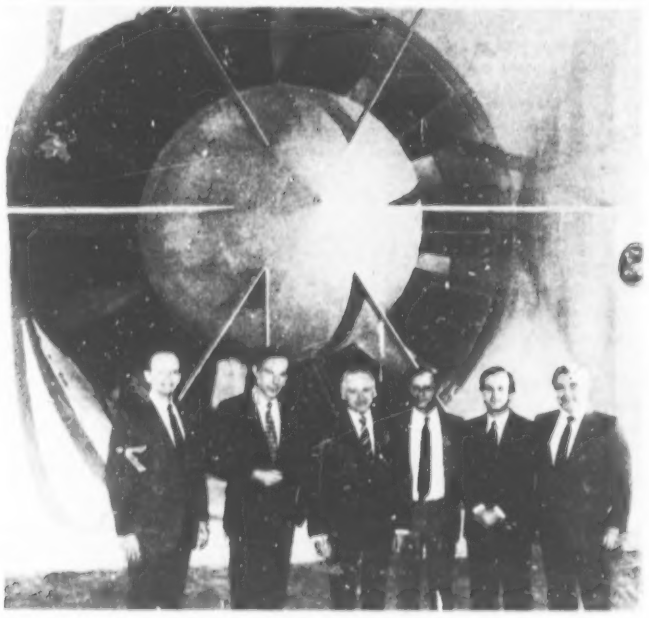
world news briefs



Ford opens its Cologne wind tunnel.

Ford opens tunnel

Ford of Europe's $9.2 million wind tunnel in Cologne, West Germany, is inaugurated by Philip Caldwell, chairman of Ford Motor Co. At the ceremony (above, left to right): Donald E. Petersen, president, Ford Motor Co.; Uwe Bahnsen, vice president-design, Ford Europe; Caldwell; Geoffrey Howard, chief engineer-design engineering, Ford Europe; Kenneth K. Kohrs, vice president-product development, Ford Europe; Howard J. Blanch, chairman, Ford Europe.

MAN change

A new chief executive takes over at West Germany's GHH engineering group. The change stems from troubles at the group's largest division, truck and bus builder MAN. The new boss, Klaus Gotte, is a financial man from the Allianz insurance group. He replaces Manfred Lennings.

Spending in Spain

Ford will invest $42 million in Valencia, Spain. Most of the money will go into an engine plant to produce a new 1.3-liter gasoline engine starting June 1985. Current Valencia engine capacity is 440,000 units annually.

Baby Benz to Bremen

Daimler-Benz's Bremen factory in northern Germany begins production of the 190/190E; 2,000 units will be produced this year, with series production getting under way next year. The W124 replacement for the mid-range car goes into production at Sindelfingen in the fall.

Innocenti losses

Nuova Innocenti (21,600 units built in 1982) anticipates a third year of revenue losses; 1981-82 losses totaled 32 billion lire ($19 million at current rates).

Audi Boost

Audi 1983 sales will top DM 7 billion ($2.7 billion) compared with DM 6.1 billion last year. Production should reach a record 390,000.

Volvo appointment

Willem Vlasblom, 40, joins the management board of Volvo Car, Holland. He is responsible for corporate planning and has worked for Volvo since 1972.

Daimler-Benz up

Daimler-Benz will build and sell more cars this year than last year. Year-end output will surpass 470,000 (458,345 in 1982). Production of the new 190 will reach 109,000, while S-class models produced will reach a record 114,000; almost half will have V-8 engines.

Alfa Romeo

Continued from Page 34

level of collaboration between companies, though he freely acknowledges the enormous difficulties. But his talk suggests that Alfa Romeo's partners will not stop at Nissan (ARNA and Fiat (1985 luxury cars) and will probably involve components as well.

"The big problem in making a joint venture between two companies is that it needs very strong willpower between, say, 20 people. The 20 people have to agree on doing things. It's not so easy, because you have to give, and that's a problem," he maintains.

But an agreement can lead to reduced investments and greater volumes to amortize unit costs.

"The customer will not realize if some of those components between two manufacturers are the same.

"In Europe there are 10 or 11 car manufacturers producing the same number of cars which in the States are manufactured by three car makers. They have scale advantage — unless we make agreements," he believes.

• Innocenti is a former aircraft industry man. He sees what has happened to the civilian aircraft industry in Europe, and that for big computers in Europe.

"We gave up (civil aircraft) in favor of America because we were not in a position in Europe, between the different aircraft industries, to make any proper agreement. In Europe we make only military aircraft.

"And then in Europe we do not have any more any type of big computer industries. Fifteen years ago we had many. They could not make an agreement, so that IBM, Honeywell and so on took over," he reflects.

In reply to a comment about Airbus Industrie gaining world sales, Innocenti states, "I am talking about profitable business.

"The car industry can survive for the next 10 years — with government money. That's a different story," says the man who is managing director of a state-owned enterprise. It is another indication that Alfa Romeo management would like to see the enterprise move from state ownership to the private sector.

Innocenti says that only when Alfa Romeo is making money once more could it pass into private ownership.

"Who would buy shares in a company that's still losing money?" he asks, adding, "The only real problem is profitability, which means market conditions. Then we don't see any basic problems."

In the meanwhile, Alfa Romeo will continue to draw on state funds for at least part of its $1.5-billion investment program over the 1983-87 period. But the managing director reports that "a substantial percentage" of the cash will be from Alfa Romeo's own internal resources.

Some will come in the form of low-interest loans from the Government (some for technological innovation) and around 10 percent will come from the open European money markets.

Registrations boom in UK

Major gains posted in Germany and Spain

By Richard Feast
European Editor

Impressive sales by the two U. S.-owned auto makers — Ford Motor and General Motors — in Europe this year resulted from their showings in their power bases: West Germany, the United Kingdom and Spain.

Their new cars, Ford Sierra and Opel Corsa, not only generated a lot of interest, but came at a fortuitous time.

West Germany, France, the UK and Italy account for three out of four new-car sales in Europe. Spain, the fifth largest market, makes it four out of five.

Unofficial 1983 registrations, for nine months ending in September indicate major improvements in Germany and Spain and a boom in the UK, three countries where Ford and GM are recognized auto manufacturers.

In France, registrations were static and in Italy they declined. (This explains 1983's luckluster performance by Renault, the leading make in France and leading importer in Italy.

New products from Fiat (Uno) and Peugeot (205 and Citroen BX) helped those countries stem otherwise adverse sales trends in their home markets.

Volkswagen was unable to take advantage of the sales resurgence in Germany, due to competition from Opel and Ford and anticipated model halt of its top-selling Golf.

As a group, VW managed a 3.2 percent sales gain, which hides the fact that VW sales were down nearly 4 percent while Audi Division sales rose by nearly one-third.

Total Japanese car sales surpassed the overall trend.

Only other auto maker to approach volumes of Europe's Big Six was BL with 4.2 percent in the nine-month period, but its showing was distorted by the fact that 80 percent of its 342,500 registrations were made in its domestic UK market. It is

Rationing ups registrations

Yugoslavians buy cars to get more gas

By Anne Hope
Special Correspondent

Gas rationing, introduced in Yugoslavia in an attempt to force people to use cars less, instead has caused a big hike in numbers of cars licensed.

The latest dodge is to register a car—its age doesn't matter—in order to claim its gas allocation. As a result, Yugoslavia is fast becoming highly motorized, at least on paper.

Since October 1982 every auto owner has been restricted to a gas ration of 40 liters a month. Since many young couples live with parents and inlaws in cities during the week but spend weekends in cottages in the country or by the seaside, they need fuel, which is why old cars are sought, bought and registered, though they may be seldom driven. Their value lies in the petrol coupons they earn.

Many Yugoslavians use two-wheel vehicles for their fuel efficiency. The number of two-car families is growing — and two-car families with motorcycles also are increasing. Often cars are not used because motorcycles can stretch the gas ration.

Yugoslavia is comprised of six republics. It has five nationalities speaking four languages, and three religions with two scripts (Crylic and Latin) in one nation. "Yes, we're six/five/four/three/two in one," I was told. "Nehru said so years ago, and it's still true."

While Yugoslavia's gasoline shortage makes headlines, fuel isn't the only commodity rationed. Though store shelves are stacked high with tins of sardines from the Adriatic, there is a scarcity of instant coffee. Also in short supply are detergents and all goods from the West, which can only be imported in exchange for hard currency.

Off the tourist tracks, few Western newspapers or magazines are available. Locals ask visitors if they have copies of TIME, NEWSWEEK, even AUTOMOTIVE NEWS. Out-of-date copies are read avidly.

Tourists are welcome and tourists with wheels don't have problems buying gas since they can purchase as many coupons as they think they will need. As long as they refuel vehicles registered outside Yugoslavia, or hire cars, they can buy gas coupons for them with no hassle.

On leaving Yugoslavia, any unused coupons can be sold back to the authorities.

• During a four-day conference at Opatija, Croatia, organized by the Yugoslav Society of Automotive Engineers, I discovered that the country, though officially Socialist (what you and I would call Communist), is "non-aligned." That means it is not behind the Iron Curtain and not on the Council for Mutual Economic Assistance, known as 'Comecon' in Western parlance and 'Cmea' in East Bloc language.

Though Yugoslavia has a population of less than 23-million, its traffic fatality toll is high. An average of 15 people die each day on the road and 700 are seriously injured—"epidemic levels," according to delegates at that conference who came from all parts of Europe. (But of 19 delegates expected from Poland only nine attended while those expected from the Soviet Union did not arrive at all.)

More people die in traffic accidents in Yugoslavia than from cancer, heart attacks or other illnesses. But a valid point made at the symposium is that not all crashes involve locals. Many vehicles on the country's *autoput* are in transit to or from the Mid-East.

Vehicle registration grew from 1,252,325 in 1970 to 3,073,034 in 1980, a 245 percent rise. In the same period the number of drivers went up from 1,719,935 to 3,972,400. Today the number of vehicles is increasing at a rate of at least 10 percent a year.

Car assembly began in Yugoslavia in 1955 and totaled 760. Assembly of buses started in 1951, when production was 36 units. Motorcycle assembly started in 1956—with 3,421.

Almost every year since then there has been an increase. The best years were 1978 for motorcycles (79,900) and 1979 for cars (285,262), buses (6,178) and trucks (23,670).

A real success story is the Adria, an attached vehicle or van. Not as big as traditional U.S. motor homes, these vans are popular in Western Europe, especially Italy and France.

Western car makes assembled in Yugoslavia include Renault, Citroen and Volkswagen. "Home-grown" Zastava models are really Fiats produced under license (though the Yugo 45 does include design changes).

Visiting the Renault assembly plant at Nova Mestro, one is surprised to see almost-completed cars awaiting windshields. Waiting is not new in Yugoslavia.

Branded gasoline isn't sold. Station signs simply say "Petrol."

New-Car Registrations by Country

	9 mos., 1983	Change from 1982
West Germany	1,913,900	+13.2
France	1,466,800	− 0.3
UK	1,464,000	+17.7
Italy	1,234,800	− 7.0
Spain	414,800	+ 5.3
Holland	358,800	+15.4
Belgium/Lux.	290,300	− 4.1

Greece	45,800	−19.7
Total	8,136,500	+ 5.4

Registrations

Continued from Page 35

not a significant force in mainland Europe.

According to unofficial figures, leading market shares for January-September 1983 are: Ford, 12.7 percent; Renault, 12.1; Fiat Auto and VW group, 12.0; Peugeot SA, 11.7; GM, 11.3; Japanese, 10.2.

Overall the 16-country market was up by 5.4 percent to 8,136,500, with hopes that the 1983 total may reach the record 10.33 million of 1979.

German auto makers stress there is no sales bonanza in their domestic market; they are merely returning to normal levels after 1982's disastrous year.

Similarly, the slight decline in France follows last year's all-time high when more than 2 million cars were sold for the first time.

UK sales have been rising steadily and are likely to better the 1979 record of 1.72 million. It is likely the country will overtake France as the second best European market this year.

Italian sales have been declining since the peak of 1.74 million in 1981.

Spain, after several years in the doldrums, is picking up, and is believed to offer the greatest growth potential in Europe.

Because these five countries account for 80 percent of total European sales, sales booms in Austria and Denmark, and declines in Ireland and Greece, have little bearing on the overall market.

Will be forced to merge as GM pulls out all stops

Ford won't survive, analyst says

By Anne Hope
Special Correspondent

LONDON. — "Europe is the battleground where General Motors has taken on Ford," according to Dr. Jim Maxmin, auto industry analyst, who recently switched from being managing director of Volvo Concessionaires in the UK to become managing director of Thorn EMI Television Rentals.

"Ford will obviously be a casualty," he went on. "Not killed, but a casualty.

"If GM knocks out Ford it will inflict substantial damage on the Ford group as a whole."

Maxmin predicted that GM would "sacrifice profit, dealers, practically anything" to hike its market share in the UK by 20 to 25 percent and, if GM's share increases dramatically, Ford would drop from 30 percent to the low 20s.

But Ford wouldn't be the only auto producer to suffer. He said BL would go down from about 18 percent to 12 to 15 percent. The Japanese would continue with 10 to 11 percent. VW-Audi, Peugeot-Citroen-Talbot, Renault and Volvo would each stabilize at 4 to 6 percent. "The rest will be also-rans," he said.

Other Maxmin quotes: "Only the strongest financially can afford to keep dealers going.

"Renault is in deep decline. Recovery may be impossible.

"There isn't a European company which could survive without Japanese technology.

"Ford thinks it can make small cars in Brazil of Japanese quality and at Japanese cost. Ford doesn't accept the decline of the big car. GM does.

"Toyota's invasion of Africa has almost crippled Peugeot.

"If you export into the States today you can make money. VW-Audi makes money on imports but not on Volkswagens made there.

"If the dollar collapses, Jaguar and Rolls-Royce will be in big trouble."

Maxmin, speaking at a function organized by Jean Denton, managing director of the Herondrive vehicle leasing company, wasn't simply thought-provoking when he suggested more joint ventures and more coming together, with far fewer independents.

He added: "GM will be the one survivor in America. Ford will hop into bed with someone and I reckon it will be Toyo Kogyo." Ford already has a 25 percent stock holding in Toyo Kogyo.

"I can't see Chrysler surviving long term."

Turning to the Japanese, he said that he does not expect Suzuki or Isuzu to survive.

Then he spoke about the West Germans: "I think BMW will hit a cash crisis — a big one." But Daimler-Benz "appears to be secure, thanks to its truck operations." The Volkswagen Group is "marginal," he said. "Its fate may be decided in the States or Brazil."

He was equally frank about the French and the Italians: "I can't see PSA surviving while Renault is in the employment business." He thought PSA and Renault would come closer together — and Fiat would probably link with the French.

"I can't see Fiat and Lancia surviving as an independent entity," he added.

Maxmin forecast that Alfa Romeo would move closer to Nissan.

Turning to the UK and BL in particular, he said: "Cash problems will continue. I don't believe BL will have the cash necessary for survival."

Japan invested heavily in technology, double what the U.S. invested, Maxmin said. European manufacturers have also invested to try to catch up with the Americans and the Japanese. But the Europeans are finding that they are unable to recoup their investment, he said.

Maxmin said he thought that the Europeans would come together and formulate a policy for Europe, as had happened with the steel and shipbuilding industries, and there would also be a planned reduction in capacity. At present auto makers in Europe have the capacity, he said, to produce two million more cars than the market required.

"Spain is a growing market," he declared, and referred to GM's success with the Nova (known as the Corsa in the UK) which from nothing is taking 11 percent — "to cripple SEAT"— in Spain.

Maxmin said that the thought survivors would be those producing 500 cars a year or 500,000, but not inbetween.

DEALERS

INTERNATIONAL DEALER SERVICES
"Sales and Profit Developers"

IDS WILL INCREASE YOUR

* UNITS _____ 50% to 100%
* GROSS _____ 50% to 100%
* LA & H _____ 50% to 200%
* WARRANTIES _____ 50% to 200%
* SALES CALLS _____ 50% to 500%
* FLOOR TRAFFIC ____ 50% to 300%

What Would This Do For Your Bottom Line?

"IDS" offers a unique, controlled method of selling and advertising, when done properly, far surpasses any systems in effect today. IDS is dedicated to results only and therefore is ready to take on a few dealers that are ready to turn their dealership around immediately with "no nonsense". Our system is tough and hard, but the results are immediate and will turn your dealership into a profit maker today. IDS works side by side with your people, hiring, where needed and training until you have a professional sales organization making your dealership highly profitable.

For more information that can turn your business life into a brighter future.

Stephenson signs with Chevrolet

Nelda P. Stephenson has signed with Chevrolet to open Nelda Stephenson Chevrolet, Inc., in Florence, Ala. She became the dealer-operator of Bobby Mitchell Chevrolet, Inc., in 1981, but the dealership has been reorganized and the name has been changed. At the signing are Terry A. Williamson, left, zone manager, and Hillard Matthews, financial participant.

McDavid purchases Datsun-Subaru deal

PASADENA, Tex. — David McDavid has purchased Pasadena Datsun-Subaru and changed the name to McDavid Datsun-Subaru.

McDavid also owns McDavid Pontiac and McDavid Honda in Dallas and McDavid Oldsmobile-Honda in Houston.

Avis boss looks at future of business

Computerized rental network seen

By Francis J. Gawronski

A futuristic look at the car-rental industry was presented by Joseph V. Vittoria, president, Avis, Inc., Garden City, N.Y., at the recent travel industry conference of the American Automobile Assn. in Hong Kong.

Noting that Avis has had on-line, real-time computer capability for a number of years, and that other major rental firms were expected to add such capabilities, Vittoria forecast worldwide communication links by the rent-a-car industry.

"Think of it," Vittoria said. "Once you've made a reservation, you'll be able to walk up to a stand-alone machine, insert a credit card, answer a couple of simple questions, and your rental agreement will be issued by the machine. You then show us your driver's license, proceed directly to your car, and drive away."

Vittoria said the industry's first such self-service rental machines will be tested by Avis sometime this month in the New York metropolitan area, through an adaption of the Rapid Return automated check-in units which already are used by more than 20 percent of the renters in peak traffic hours at locations where Avis now has them in place.

• Vittoria said the upcoming self-service units will not be limited to rent-a-car locations, but could easily be placed in high-traffic areas such as shopping centers, hotel lobbies, remote airline terminals, or office complexes.

"Now you're probably saying to yourself, 'OK, now you're trying to do away with our commissions,'" Vittoria told the AAA meeting.

"No way, he said. "If a reservation was made through a travel agent, and the customer picks up his rental agreement at a self-service unit, you'll get your commission."

In a discussion of other high-tech services that will be introduced by the car rental industry, Vittoria singled out terminal units for travel agencies which not only offer instant reservations and identification of the best rate available for the individual transaction, but also provide a variety of regular management reports, such as travel patterns, frequency of rental, and the systematized tracking of commissions on monthly, weekly or daily basis.

"The car rental industry will be bringing fully integrated rental capability right into your office," he said. "In fact, it won't be long until you'll be able to deliver a car rental agreement directly to your clients, along with the airline ticket and hotel confirmation."

Vittoria emphasized that on-line, real-time computer capability was necessary before such innovations are available industrywide, and he noted that the 11-year-old Avis on-line computer system was still "the only one of its breed in our entire industry."

"But we won't be alone for long," he said. "After all, rent-a-car industry revenues are up 10 to 12 percent to date in 1983 —and Avis is up about 20 percent.

"Business and leisure travel are rebounding, in the U.S. and throughout the world," he said. "The car-rental industry is poised for the greatest decade of growth in its history."

"You'll be seeing a technological revolution in our industry over the next few decades," he said, "and the travel agencies and the traveling public will be the primary beneficiaries."

• Elsewhere, Robert J. McKenna, formerly president of Holland America Line (U.S.A.), Inc., Stamford, Conn., has been appointed vice-president and general manager of Avis Rent A Car System, Inc.

Prior to joining Holland America, McKenna spent 22 years in the rent-a-car industry. He joined Hertz Corp. in 1960, and after serving in a variety of positions in the car rental operations, was named executive vice-president of the Hertz Truck Division.

AmiCar Rentals, Inc., Madison, N.J., has been established by Dan Brettler, a Budget Rent A Car licensee for more than 11 years, and Randy Bullock, who was with National Rental Car Systems, Inc., more than 10 years.

Targeted for the automobile dealer market, both new and used, AmiCar is currently setting up licensees and providing on-site training. AmiCar trains all licensees and their employees "in the methods and procedures that have had proven success in the car-rental industry," Brettler said.

"The combination of the AmiCar system and the automobile dealer's resources fills a void in the local car-rental market for an inexpensive car rented from a professionally operated," Brettler said.

• United States Fleet Leasing, Inc., San Mateo, Calif., has acquired a fleet of 25,000 net finance leased vehicles from Hertz Corp. The transaction involved acquisition of approximately $29 million of assets, with financing arranged through New York banks.

Ira Brind, president, Brind Leasing Corp., has announced the acquisition of Riteway Rentals, Inc., New Brunswick, N.J. Riteway, which currently operates over 3,000 vehicles with 10 locations in greater New York, will become a wholly owned subsidiary of Brind.

The combined revenues of Brind and Riteway will exceed $40 million annually. Brind is a subsidiary of McDonnel Douglas Financial Corp.

GMAC names Trice

BALTIMORE. — James E. Trice has been promoted to manager of the General Motors Acceptance Corp. control branch here. He succeeds Fred B. Winckler Jr. who has been transferred to San Francisco.

Annual costs to operate '83 wagons vary widely

ROCHESTER, Wis. — The average annual costs to own and operate a 1983 station wagon varies by as much as $2,425, according to a report by Runzheimer & Co., Inc.

Ten '83 station wagons were selected for the study, and costs were based on the cars being driven 20,000 miles a year for three years.

Operating costs for the 11 vehicles ranged from the 8-cylinder Ford LTD Crown Victoria Country Squire at $5,934 per year to the 4-cylinder Honda Civic station wagon at $3,509.

Of the six 4-cylinder wagons studied, the most costly to operate is the Volvo DL, with an annual cost of $5,117.

The Datsun Maxima is more expensive to operate than the Dodge Aries and Chevrolet Malibu Classic wagons. SAE standards classify the Maxima as a small wagon, while the other two wagons are termed intermediate.

The wagons were similarly equipped, and all had automatic transmission, power steering, power disk brakes, air conditioning, tinted glass, AM radio and body side moldings.

ANNUAL COSTS TO OPERATE '83 WAGONS

Make/Model	Cyl./Liters	Average Annual Costs Operating	Ownership	Total
Honda Civic	4/1.5	$1,100	$2,409	$3,509
Toyota Corolla	4/1.6	1,100	2,513	3,613
Chevrolet Cavalier	4/2.0	1,310	2,563	3,873
Ford Escort L	4/1.6	1,260	2,018	3,878
Nissan Maxima	6/2.4	1,440	3,534	4,974
Dodge Aries	4/2.2	1,350	2,984	4,334
Chevrolet Malibu Classic	6/3.8	1,640	3,197	4,837
Volvo DL	4/2.3	1,430	3,687	5,117
Oldsmobile Custom Cruiser	8/5.0	1,890	3,888	5,778
Ford LTD Crown Victoria Country Squire	8/5.0	2,040	3,894	5,934

Basis: All costs based on three years/60,000 miles of ownership. Operating expenses include gasoline at $1.35 per gallon, oil, maintenance and tires. Ownership expenses include licensing, depreciation, financing, taxes and insurance.

Earnhardt deals earn funds for 'Jerry's kids'

TEMPE, Ariz. — A promotion to earn donations for the Jerry Lewis telethon for muscular dystrophy brought scores of customers and interested participants to Earnhardt Ford here and Earnhardt Dodge in Scottsdale, Ariz.

The dealerships contributed $100 for each car sold during the telethon and $15,000 was raised by the Earnhardt dealerships for the national telethon.

During the telethon, the dealership kept their doors open later than usual and dealer Tex Earnhardt appeared for several hours on the local TV outlet for the telethon.

A large thermometer recording the progress of the car sales in the Tempe dealership buoyed customers' enthusiasm.

NRG Dynamics develops reusable aerosol can

IRVINGTON, N. J.—NRG Dynamics has developed a refillable, rechargeable and reusable aerosol can designed for common liquids used in service shops.

Called Air-O-Sol, the can works with any liquid (including paint), normally applied as an aerosol, according to NRG. The can is charged by an air compressor with an air adapter hose supplied at no charge.

Makers produce 181,714 units with heavy overtime

U. S. car output highest in 4 years

By Marjorie Sorge

U. S. auto production last week was the highest in almost four years as the makers built 181,714 units.

The week ending Dec. 15, 1979 the domestic producers built 187,259 cars.

The November forecast of 657,283 is the highest November in five years. In November 1978, the makers built 862,127 cars. Last year the makers built 404,542 cars, off 62.48 percent from this year's output.

Heavy overtime, particularly at General Motors contributed to the jump in auto production last week when output was up 93.94 percent from the previous week's 93,695 and up 74.65 percent from last year's 104,044. The previous week's output is low because of the two-day Thanksgiving holiday.

So far this year the auto makers have produced 6,293,071 units, up 31.88 percent from last year's 4,771,877.

GM scheduled Saturday overtime at 10 plants last week including Arlington, Bowling Green, Detroit, Fairfax, Flint, Janesville, Lordstown, Norwood, Oklahoma City and Van Nuys.

GM began production last week of its new front-drive C bodies at its Lake Orion (Mich.) plant.

Ford scheduled overtime Saturday at its Chicago assembly plant.

Chrysler worked overtime last week at four plants. Newark, St. Louis No. 1 and Belvidere worked nine hours on both shifts daily while Jefferson worked 8½ hours on both shifts and St. Louis No. 2 worked 10 hours on one shift.

Volkswagen of America was down Nov. 28 for Deer Day, a negotiated vacation day on the first day of hunting season.

Breakdown by company for the week was: GM, 59.41 percent; Ford, 20.46 percent; Chrysler, 14.80 percent; American Motors, 3.16 percent; Volkswagen, 1.14 percent, and Honda, 1.03 percent.

Nissan Australia builds sedan version of Pulsar

SYDNEY, Australia. — Nissan Australia is chasing the Meteor market with a sedan version of the locally built Pulsar.

Meteor has been a very successful variation of Ford's front-drive Laser which in turn is based on the Mazda 323.

Adding a trunk to the Pulsar hatchback body shape increases the price by $200 but the new Pulsar still costs $69 to $710 less than the equivalent Ford model.

Company engineers claim that the trunk style increases the body's torsional strength and gives better sound insulation. They expect to sell an extra 700 Pulsars a month by offering a choice of body styles.

A revised suspension and exhaust system introduced with the sedan is also fitted to the hatchback as a running change.

Apart from the body shape, the front-drive Pulsar sedan is identical to the hatchback and comes in two models, GX and GL.

Both have 5-speed manual transmissions as standard and an unusual lock-up automatic as an option.

A lengthy test drive on International Harvester's test track near Anglesea, Victoria, shows that the Pulsar sedan is roomy, quiet, stable and lively, with a reasonable ride on rough surfaces and strong braking.

The GX model has a high level of equipment, including a stereo sound system, cloth trim, tinted laminated windshield, tachometer and remote releases for the trunk lid and fuel filler door.

Pulsar sedan prices start around $8,470.

Nissan Australia offers Pulsar sedan

Nissan Australia has added a trunk to the Pulsar hatchback body shape and boosted the price by $200. Company engineers said that the trunk style increases the body's torsional strength and gives better sound insulation. Nissan expects to sell an extra 700 Pulsars a month.

Truck production in November is best since 1978

Truck production for November is estimated at 219,136 units, making it the best November in five years. In November, 1978, truck makers built 339,721 units. Last year 126,935 trucks were built in November, 72.63 percent below this year's output.

Bolstered by overtime at six plants, last week's truck production was 46,786, up 64.19 percent from the previous week's 28,495 and up 28.70 percent from last year's 36,350. The previous week's output was off because of the Thanksgiving holidays.

So far this year the truck manufacturers have built 2,208,439 units, up 23.98 percent from last year's 1,781,220.

Saturday overtime was scheduled at six plants last week including General Motors Janesville, Lordstown, Pontiac and St. Louis and Ford Lorain and Wayne.

Car production up threefold for week in Canada

Last week's Canadian car production was targeted at 22,905, up 7.75 percent from the previous week's 21,259 and almost three times more than the 7,752 build in the year-ago period.

So far this year, the manufacturers have completed 898,795 cars, leading the year-ago output of 779,783 by 15.27 percent.

Truck production last week was estimated at 14,622, a slight fall from the 14,758 units assembled in the prior week. Last week's total was, however, more than double the 7,139 trucks built in the year-ago period.

Year-to-date, there have been 509,166 trucks finished, up 12.24 percent from 453,678 completed at this time last year.

Chrysler Corp. estimated that 2,227 T-115 minivans were built at its Windsor facility. Of that total, 1,102 were Dodge Caravans; 1,065 were Plymouth Voyagers, and 60 were Mini Ram Vans.

But shortages persist

Car stock rises to 55 days

By Richard A. Wright
Assistant Managing Editor

The domestic makers managed to beef up their new-car inventory during November to a 55-day supply by Dec. 1, but shortages in the hot-selling lines persisted.

The inventory totaled 1,307,756 Dec. 1, a 55-day supply, compared with 1,224,092 a month earlier, a 48-day stock. A year earlier, the industry had 1,164,338 cars in stock Dec. 1, a 52-day supply.

Shortages were most numerous in General Motors lines, with Pontiac's Fiero shortest of all. Also lean were some of the standard and luxury nameplates.

GM, Ford Motor Co. and Chrysler Corp. increased their inventories during November, while American Motors and Volkswagen of America pruned stocks a bit.

• GM opened December with a 50-day supply, up from 42 days a month earlier. Shortages were the rule for Fiero, Olds 88 and 98, Buick LeSabre, Electra and Riviera, all Cadillacs except Cimarron and Chevrolet Corvette.

Ford Motor Co. had a 65-day stockpile Dec. 1, up from 58 days a month earlier. Ford was short of Lincolns.

Chrysler Corp. went into December with a 64-day supply, up from 54 days Nov. 1.

AMC trimmed its inventory from 76½ days Nov. 1 to a 68-day supply Dec. 1, while VWoA cut its stock to a 58-day supply Dec. 1 from 68 days. Honda had a 22-day supply of U.S.-built Accords, unchanged from a month earlier.

The Dec. 1 domestic new-car inventory was divided this way: GM, 54.37 percent; Ford Motor Co., 27.84 percent; Chrysler Corp., 12.12 percent; AMC, 3.88 percent; VWoA, 1.41 percent, and Honda, 0.38 percent.

A month earlier, the domestic new-car inventory was divided as follows: GM, 54.23 percent; Ford Motor Co., 27.24 percent; Chrysler Corp., 12.97 percent; AMC, 3.68 percent; VWoA, 1.52 percent, and Honda, 0.36 percent.

• By size class, each market segment increased its days-supply figures during November, except luxury, which was down sharply.

On Dec. 1, the industry had the following supplies by market class: Subcompact, 62½ days; compact, 63 days; intermediate, 57½ days; standard, 45 days, and luxury, 34 days.

A month earlier, the days-supplies by market class were: Subcompact, 59; compact, 55; intermediate, 47; standard, 36, and luxury, 47.

The Dec. 1 domestic inventory was divided this way among market segments: Subcompact,

breaking news

GM to appeal N. Dakota X-car brake verdict

DETROIT. — General Motors plans to appeal a North Dakota jury's verdict that the brake system in a 1980 Chevrolet Citation was defective and dangerous and that GM was negligent in designing and selling the car that way. The case stemmed from an accident in which the wife of the Citation driver was rendered a paraplegic. It is the first major lawsuit GM has lost on X-car brakes. The Federal Government is suing GM in Washington, seeking recall of 1.1 million '80 X-cars and asking $4 million in damages. GM has denied the charges against X-car brakes.

Ford may offer more oomph in Mark VII

DEARBORN.—Ford Motor Co. is studying the possibility of making available a hotter engine for its luxury Continental Mark VII introduced in November. Ford's 165-HP, high-output 5.0-liter V-8 with electronic fuel injection is the engine under consideration. Standard in the Mark now is a 5.0-liter fuel-injected V-8 of 140 HP.

Micro-micro-mini

Yamaha midget bows in Japan

Yamaha has built a neat little experimental town or factory car. Called the PTX-1, it has a plastic body. The 50-cc engine may be too small to make this a practical vehicle for everyday use—even in Japan.

U.S. sales considered for Dutch-built Volvo

By Richard Feast
European Editor

HELMOND, Netherlands. — The U.S. market could be worth up to 30,000 units a year for the next-generation Dutch-built Volvo small car, according to Andre Deleye, president of Volvo Car BV here.

These are ambitious numbers for a company which does not sell in the U.S. at present and which this year will make a record 100,000 cars.

"It's logical that we should have that ambition because our Swedish colleagues are rather well established in that market," Deleye said. "They have a very good organization and dealers in the U.S."

"However, that's a very big step for a company like ours. There are stringent rules in the American market and product liability laws. They're not points that we'll have difficulty with, but it's a question of quite some involved costs to satisfy the technical and other requirements in the U.S."

Volvo car is owned 30 perby Volvo Car Corp. of Sweden and 70 percent by Dutch state interests. It has never sold cars in the U.S.—though when the company was originally created as DAF, a handful were exported to the U.S.

• Volvo Car's current model is the 300 series, sold throughout Europe alongside Swedish-made Volvos. It is a best seller in the UK, which accounts for around a third of output.

But it will not be the 300 series which will be exported. It will be the next-generation model which Volvo Car promises "for the second half of the 1980s."

Accurate details are scarce, but sources in the Netherlands suggest that it will appear as a front-drive car—the 300 has rear-drive—in 1986. Engines are expected to be those from the Renault 9/11 (Alliance/Encore), an already certified engine.

Volvo Car already buys engines from Renault, as well as its Swedish sister company.

Inevitably it will utilize the latest CVT transmission from Van Doorne's Transmissie, in which Volvo Car has a controlling interest.

A spokesman for Volvo of North America said there are "no plans at this point in time" to import the Dutch-built car. They have been tested in the U.S., he said, adding that import in the future is possible.

• When Deleye talks of U.S. sales of 25,000 to 30,000, he describes these as ambitious.

"That's very much related to

Opponents clash at passive-restraint hearing

Change human nature or machines?

By Helen Kahn
and Geoff Sundstrom

WASHINGTON.—Seven days and nights of hearings on what the government should do with a passive-restraint standard were climaxed by the appearance of two witnesses who personified the polarity of views expressed.

On one side, Michigan Rep. John Dingell favored rescission of the standard. On the other, Joan Claybrook, former head of NHTSA, supported reinstatement of Standard 208 and quick implementation.

Most witnesses did not quarrel with the importance of getting people to wear belts they have paid for, but many said the passive-restraint standard was an approach that required changing machines — an easier task than changing human behavior and a quicker approach than waiting for 50 states to act.

In general, the auto makers were aligned against the insurance companies, and the public health groups against the engineers.

NHTSA—which has bent over to accommodate all "interested parties" and to make a new and expeditious record — heard not much that was new except for the Ford proposed fleet mandate and except for a mechanical sensor. The idea of a cheap and retrofitted air-bag system that might be useful as a supplement but perhaps not entirely suitable for all configurations was also brought up.

In other developments:

1. Allen Breed testified he has developed a mechanical sensor to make an air-bag module feasible for retrofit at greatly reduced cost.

2. Volvo said it has decided to offer a driver-only optional air bag on 1987 models. It will thus join Mercedes-Benz (1984) and BMW (1985).

3. General Motors said it plans to file details later this month on how to protect the unbelted driver with greater "forgiveness" from interior surfaces and such fixtures as the steering wheel.

4. Several insurance firms took the position that reinstatement of the standard with an effective date for 1986 models (rather than the possible 1987 date suggested by NHTSA) would be appropriate and legally necessary under the remand from successful insurance company litigants.

5. American Motors proposed an annual $40-million fund, half from government and half from industry, to educate consumers to buckle up.

6. The Insurance Institute for Highway Safety said a national survey showed more than half

Service Index grows slowly

By Francis J. Gawronski
Service Editor

Service and parts business in the nation's new-car dealerships continued on the bright side in October, but the rate of growth dipped from that recorded in the previous two months.

According to the Automotive News Service Index, shop business in October amounted to 111.8 percent of that done in the corresponding month in 1982.

In August, service and parts volume amounted to 115.5 percent and in September it was 115.3 percent of the business recorded in the same months of 1982.

October also marked the eighth consecutive month in which shop volume has recorded an increase over the year-earlier month.

As in the previous five months, all indicators used in

Other importers accused

Prospective dealers coerced, Bricklin says

By John A. Russell
New York Reporter

NEW YORK.—Major importers in the U.S. were accused last week of trying to prevent their dealers from dualing with International Automobile Importers, Inc., and Malcolm Bricklin, chairman of IAI, said letters were being mailed to all import presidents advising them of this situation.

Bricklin told AUTOMOTIVE NEWS at least 40 incidents have been reported where dealers who expressed an interest in the Pininfarina and Bertone automobiles have been pressured and could not go through with the deal.

Makes named specifically were Mercedes-Benz, BMW, Porsche-Audi and Subaru.

Bricklin said the influence exerted included threatening to cut the dealers car allocations, or telling the dealer they would receive more cars if they did not sign with IAI.

Bricklin said dealers expressed fear of signing with IAI because of the threats that have been made in the field.

The letters going to the import presidents, he said, are to advise them that a situation does exist of which they might be unaware.

• All the representatives of importers whose dealers were named by Bricklin said they were not familiar with the charge.

A spokesman for Mercedes-Benz of North America said it was not a company position to discourage dual franchises. He added the district sales people do point out advantages to being exclusive but there is no campaign to discourage duals.

A BMW spokesman said it was not a "policy of the company to put pressure on dealers." He added that BMW does not have an official policy on dual dealerships, adding that many BMW dealers at present are dualed.

A spokeman for Porsche-Audi said he did not know of the incidents, but said there is a contractural agreement with all dealers that they cannot put another franchise in the same building with the Porsche-Audi franchise.

As for Subaru of America, the company which Bricklin founded, Alan B. Ross, vice president of corporate communications, said there was no effort on SoA's part to discourage dualing with IAI, adding that SoA staff do not come into contact with dealers since they have an independent distributors network.

"To us it's just another car line," he said.

Bricklin said he will not be stopped from signing first-class dealers in an area no matter what franchises they currently hold.

As Jensen retires

GM names Atwood executive VP

A fast-rising General Motors executive took a big step up the ladder last week. Donald J. Atwood, 59, was chosen to succeed Reuben R. Jensen as executive vice president of the corporation.

Atwood will take over his new duties Jan. 1 when Jensen retires. Jensen will be 63 on Dec. 22. Atwood also was elected to the GM board of directors.

Since November, 1981, Atwood has been vice president and group executive in charge of the worldwide Truck and Bus Group. His new job will include those activities plus the Power Products and Defense and Components operations.

Donald J. Atwood

Reuben R. Jensen

Atwood will hold one of the five top jobs in the corporation. As executive vice president, he will join F. Alan Smith, heir-apparent to the chairmanship. They are outranked only by the chairman, the president and the vice chairman.

When an executive reaches Atwood's rank, there often is speculation about his next post — the presidency of the company, for example.

Such a promotion is unlikely in this case. Atwood is 59, less than two years younger than GM President F. James McDonald, and it is highly unlikely that GM would appoint a president who could serve only a year and nine months before reaching retirement age.

Atwood's rise at GM has been swift. He became a vice president in August, 1978, a little more than five years ago. The progression from vice president to executive vice president — for the very few who make it — usually takes much longer than that.

• Atwood joined GM in 1959 as an assistant director of the Boston Engineering Facility of AC Spark Plug Division. He became director of that facility two years later and in 1962 was named director of sales and engineering at AC's Milwaukee operations. He was appointed director of operations for AC Electronics (now Delco Electronics Division) in 1969.

When Detroit Diesel Engine and Allison divisions were consolidated into Detroit Diesel Allison Division in 1970, Atwood was named manager of the Indianapolis operations.

He became the first general manager of GM's new Transportation Systems Division in 1974 and general manager of Delco Electronics later that year.

In 1978, he was elected a GM vice president and named general manager of Detroit Diesel Allison. In January, 1981, he became vice president and group executive of the Electrical Components Group, the post he held when he was named head of the worldwide Truck and Bus Group on Nov. 2, 1981.

GM has not appointed a successor to Atwood in that position.

Jensen has been with GM since 1946, starting as a machine tool and die engineer with Detroit Transmission Division (now Hydra-matic Division).

He was named Hydra-matic general manager in 1965, general manager of Allison Division in 1967 and was elected a GM vice president later that year. His 16 years as an officer of GM is the longest tenure of any current officer.

Jensen was appointed group executive of the Nonautomotive and Defense Group in 1970 and later served as group executive for the Car and Truck Group and group executive for Overseas Operations.

He was elected an executive vice president in 1974 with responsibility for Overseas Operations and Nonautomotive and Defense Operations. He was named to the board of directors at that time.

Jensen has been in charge of Power Products and Defense and Component Operations since 1978. When the worldwide Truck and Bus Group was formed in 1981, it was placed in his sphere.

New-car supply rises to 55 days; shortages persist

Continued from Page 1

19.87 percent; compact, 26.47 percent; intermediate, 36.12 percent; standard, 10.08 percent, and luxury, 7.46 percent.

A month earlier, the inventory was divided as follows: Subcompact, 19.65 percent; compact, 25.08 percent; intermediate, 35.58 percent; standard, 9.04 percent, and luxury, 10.65 percent.

• The Dec. 1 days-supply figures by market class were:

Subcompact — Fiero, 17; Accord, 22; LN7, 39½; Laser, 52; Rabbit, 58; Escort, 61; Horizon, 63; Omni, 66; Chevette, 69; Encore, 70; Daytona, 73; Turismo, 73½; Alliance, 74½; Lynx, 88; Charger, 93; 1000, 93, and EXP, 108.

Compact — Eagle, 42; Cavalier, 49; Skyhawk, 52½; Camaro, 53; LeBaron, 55; Mustang, 60; Firebird, 60; Aries, 66; Reliant, 67; Dodge 400, 68; Topaz, 70; Sunbird, 79; Firenza, 80; Tempo, 82; Cimarron, 86, and Capri, 88.

Intermediate — Malibu, 39; Ciera, 40½; Century, 41½; Regal, 43; Cutlass, 44; LTD, 47; Celebrity, 52; 6000, 52; Chrysler E Class, 53; Marquis, 55; Skylark, 63; New Yorker E, 69; Dodge 600, 69; Bonneville, 71; Grand Prix, 77; Monte Carlo, 80; Thunderbird, 82; Omega, 85; Cougar XR7, 97; Phoenix, 99, and Citation, 104.

Standard — Olds 88, 27½; Gran Fury, 33; LeSabre, 38; Grand Marquis, 44; Crown Victoria, 50; Diplomat, 53; Chevrolet, 54; Cordoba, 57, and Parisienne, 58.

Luxury — Lincoln, 27; Seville, 27; Olds 98, 27½; Eldorado, 30; Electra, 33; Cadillac, 33½; Corvette, 35; Riviera, 36; Continental, 41; Toronado, 48; Mark VII, 50, and Fifth Avenue, 75.

Grand Prix for sun worshippers

Convertible Specialists, Inc., Gardena, Calif., has added the Pontiac Grand Prix—as well as the other General Motors G-body cars — to its line of convertible conversions. The $4,000 conversion, sold through Convertible Concepts, Ltd., Blaine, Wash., features a power top and full headliner. The original back seat is retained.

Dealership helps the poor

Bob Simonds Pontiac-Honda, Phoenix, allowed one of its Fieros to be used as a pace car for the city's 10-kilometer Run Against Hunger. The car is shown with the front row of the race's wheelchair participants. The event raised funds for three area charities.

New-car sales rebound; month's total tops 780,000

By Jenny L. King
Staff Writer

Domestic new-car sales were back on the winning track by the end of November following a surprise mid-month decline of 17.09 percent. Total for the month for the U. S. auto makers was up 5.80 percent from year-ago sum, bringing to 10 the number of months this year in which sales have surpassed 1982 levels.

Sales of imported cars also were up in November. They

Tables on Page 58.

have been ahead of 1982 in 10 of the 11 months so far this calendar year.

Powered by a late-November sales increase of 37.05 percent, domestic sales climbed 5.80 percent to 590,527 from 558,146 last year. Imports gained more than 5,000 units with a total of 190,177 for the month this year compared with 185,059 in 1982.

The industry total was 780,704, up 5.05 percent from 743,205 last year.

Year-to-date domestic sales were up 17.47 percent, to 6,235,881 from 5,308,612, putting them ahead of the U. S. totals for 1982 and 1981, but below the 1980 domestic total of 6,578,275 for 11 months.

Import sales for the first 11 months were up 7.48 percent from 1982, with 2,189,803 versus 2,037,403.

Year-to-date industry-wide sales were 8,425,684, up 14.70 percent from 7,346,015.

• All the major domestic auto makers except General Motors reported November sales increases. GM's tally was off 0.58 percent (357,247 this year compared with 359,349 in 1982). Ford Motor Co. was up 13.58 percent, to 139,319 from 122,661, while Chrysler Corp. reported a 10.16-percent climb, to 61,605 from 55,921.

American Motors dealers delivered 18,604 AMC and U. S.-built Renault cars in November, up 38.21 percent from 13,461. Volkswagen was up 17.68 percent, to 7,948 from 6,754, and Honda sales totaled 5,804 in its first November in the domestic market.

GM dropped nearly four percentage points in its share of the domestic market in November, plunging to 60.50 percent from 64.38 percent. Ford expanded to 23.59 percent from 21.98 percent. Chrysler was up to 10.43 percent from 10.02 percent.

AMC held 3.15 percent of the total, up from 2.41 percent and

Two firms sued for removing catalytic units

WASHINGTON. — Catalytic converters were allegedly removed from company vehicles owned by Atlantic Richfield Co., Philadelphia, and from customers' vehicles serviced by Lew Smith Muffler & Parts, Inc., Covington, Ky., according to a Department of Justice action.

The complaint is being brought against the two firms on behalf of EPA.

The action charges Atlantic Richfield with the removal of 12 catalytic converters from company owned vehicles and claims that leaded gasoline was used in 28 vehicles requiring unleaded fuel. The requested civil penalty exceeds $330,000.

The EPA said Lew Smith Muffler & Parts had removed 46 catalytic converters from customer vehicles, and had enlarged the gasoline inlets on seven of the vehicles so they could use leaded gasoline. The government is asking $132,500 in civil penalties from the muffler shop.

EPA recently issued both companies Notices of Violation, and attempted to settle out of court. When settlement could not be reached, the cases were turned over to the Department of Justice, EPA said.

Bendix unit files patent complaints

CLEVELAND.—Bendix Automation has filed a complaint with the International Trade Commission against Amada Co. under a provision of Section 337 of the Tariff Act, according to Bendix legal counsel, Howard Massung.

The complaint states that Amada Co., Ltd. of Japan and its U. S. subsidiary U. S. Amada, Ltd., have infringed patents licensed to Bendix Automation Co. for the Right Angle Shear (RAS). Bendix Automation holds exclusive rights to those patents.

The ITC has accepted the complaint and ordered an investigation.

Production 3 to 5 years away, Continental says

New way developed to attach tire

By Anne Hope
Special Correspondent

LONDON. — Continental, Europe's No. 2 tire maker, has taken the unusual step of launching its new tire system now even though it doesn't expect production to start for some years — "possibly three but more likely five," according to Chairman Helmut Werner.

So why the rush? Why the premature disclosures?

Because Conti — full name Continental Gummi-Werke and understood to be one of only two European tire producers in the black — wants partners.

Without partners, the new concept, called the ContiTire-System (three words rolled into one), just won't succeed.

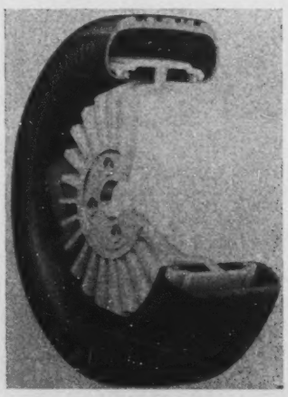
Conti is spending around $40 million — about 30 percent of its annual development budget — on perfecting the CTS for production. That annual investment gives an indication of how important the new concept is to the Group. But, even so, more backing is needed.

• CTS, which is claimed could capture a third of the original equipment and replacement tire market in the U. S., Japan and Europe, was the idea of Conti engineer Wolfgang Rach — apparently a modest man, for he wasn't at the presentation in London. The first patent on his system was taken out in 1980.

A further 20 patents have been applied for in an attempt to safeguard the system worldwide.

Not that Conti wants to go it alone. Far from it. R & D costs have strained Conti, which, anyway, nearly went bankrupt in the late '60s. Then, in 1973, Dr. Carl Hahn, whose father was one of the founders of Auto Union, took the top job at Hanover. By the time Hahn left in December, 1981, to return to Volkswagenwerk as chairman, Continental had become Europe's No. 3 tire producer.

• It was while Hahn was with Conti that a technical and commercial agreement was signed with an important overseas partner, Japan's Toyo Tire & Rubber. In 1982, an agreement with General Tire & Rubber of the U. S. followed.



Conti's system

New way of fitting tire to rim has been announced by Continental Gummi-Werke in Europe even though much testing remains to be done. Many advantages are claimed for the "hook-on" tire mounting.

The agreement with General was especially important, for it gave Conti entry to the huge stateside market through General's large distribution network.

These agreements have made Conti into a powerful force to be reckoned with outside Europe, the company believes.

Conti executives consider that CTS will "put the Group on the world map" and even have as much impact as Michelin after launching the radial tire.

But, to quote Werner again, "The competition is not asleep."

Conti doesn't make wheels, which could be considered a snag, as the CTS needs a special wheel and rim.

However, at a very early stage, Conti contacted "a very competent wheel manufacturer."

• Conti is now looking at automatic fitting. At present, the few CTS concepts produced have all had to be mounted by hand.

It takes four to 14 seconds to mount a tire on its rim in a car plant. If fitting cannot be done quickly on the line, required volumes won't be achieved.

"I don't believe that any large-scale car manufacturer will take the CTS until the machinery to mount it automatically is available," Werner said.

• "It is no longer enough just to present a brilliant technical achievement."

Claims for CTS include:

10 percent more driving comfort; 10 percent more skid resistance; 10 percent higher mileage; 10 percent less weight; 15 percent more room for fitting brakes and especially asbestos-free ones; 15 percent less rolling resistance, and 25 percent better behavior when driving and claimed run-flat capability for at least 250 miles.

Conti people are convinced that the advantages offered by the CTS will persuade car makers to decide to fit the CTS as standard within a few years. Exactly when depends on the auto producers and tire/rim makers.

Ford truck incentive aimed at beating Chevy for year

DETROIT. — Ford Division apparently figures a 10 percent increase in truck sales in December over what it originally anticipated will be enough to beat Chevrolet in calendar-year truck sales.

Essentially, that's what a last-minute $300 to $4,000 contest for sales managers is geared to.

The Ford Division "Holiday Happiness—Gold to Go" contest runs from Dec. 1-31. It puts sales managers into one of four groups and gives each group an all-truck objective of 110 percent of their original forecast.

Managers in the top group, representing the large dealerships, who hit 110 percent have a choice of two gold Rolex watches (men's or women's); one watch and $2,000, or $4,000 in cash.

The watches reportedly have a retail value of $4,000 each.

Managers in the second-tier group get one Rolex watch or $2,000.

Those in the third group get $1,000, and those in the fourth receive $300.

Everyone who hits 110 percent wins. Managers can step up into the next higher category than the one they're in by accepting the minimum objectives of the higher category.

Dealers who don't have sales managers can designate themselves to be eligible. Fleet, lease and retail sales count, and new '83/'84 trucks are included in the objectives.

This program supplements a previously reported "Holiday Happiness" contest which runs concurrently. It is intended to counter the pressure of a recently announced Chevrolet truck contest.

Hall of Fame plans 45th annual affair

MIDLAND, Mich.—The Automotive Hall of Fame will present 10 Distinguished Service Citations and announce new electees to the Hall of Fame at a luncheon to be held Feb. 5 in Dallas in conjunction with the NADA convention.

Featured speaker will be Gerald Greenwald, vice chairman of Chrysler Corp.

The 45th annual luncheon will be held at noon in the Reunion Ballroom of the Hyatt Regency Dallas. Tickets are available ($30 each) from Automotive Hall of Fame, Inc., P.O. Box 1742, Midland, Mich. 48640.

ESOP brings $4,452 in stock to Chrysler aides

DETROIT. — Chrysler Corp. employes who have participated in the first three years of the Chrysler Employe Stock Ownership Plan (ESOP) now have approximately 159 shares of Chrysler Corp. common stock in their plan accounts, the company said.

Based on the Dec. 2 closing price of $28 per share, the value of such shares is about $4,452.

Accounts for approximately 68,000 Chrysler employes have each been credited with about 19.6 shares of Chrysler Corp. common stock for the third year of the four-year plan set up under the Chrysler Loan Guarantee Act of 1979.

The ESOP covers employes whose compensation and benefits were modified as a result of the Act. The Act requires that $162.5 million worth of Chrysler common stock be contributed to the plan over a four-year period ending June 30, 1984.

The stock is put into a trust for the employes until they retire or otherwise terminate employment.

In the first three years, Chrysler has contributed 13,590,000 shares to the plan. Including the shares in the ESOP, Chrysler said, Chrysler employes and retirees own approximately 15.9 percent of the company's common stock.

They clash with gray-marketers at hearings

Importers ask EPA rule changes

Continued from Page 2

000 for a car we can't work on." Another dealer said it damages his reputation when service is refused on a product of his manufacturer.

Even modifiers themselves testified in Washington that as many as 90 percent of the gray-market cars could not pass EPA tests even though some are inspected by EPA-certified laboratories.

They implied that the tests were being performed improperly on many cars, that faulty or unsafe equipment was being installed and that equipment was being "recycled" from car to car in order to pass the one-time inspection.

Modifiers testifying during the workshop said the problem discouraged honest operations, since they could not compete against those who did not incur the same labor, material and research costs.

However, when EPA asked whether the modifiers would consent to spot checks on their vehicles, they backed away, asking instead why the EPA could not do a better job in monitoring test laboratories.

• At the San Diego workshop, Allen Hardy, of Hardy & Beck Performance, Inc., and president of the A'CA, proposed a method of certifying emission laboratories.

"The present testing option should be amended by requiring that the test labs be certified by the EPA," Hardy said.

"The present 'approval' program (EPA provides lists of certification labs) is almost a certification program, but it suffers from a lack of formality that permits confusion about responsibilities and the consequences of improper conduct."

He added that formalizing the approval procedure and including a decertification mechanism would force the dishonest labs out of business.

Hardy also recommended that the EPA require the labs to hold the cars they've tested for 10 days, beginning the day EPA receives the test report.

"During the hold period, EPA would have the prerogative of requiring a retest by the test lab or testing the vehicle using a third-party tester," he said. When the 10 days have elapsed and no test is called for, the EPA would then send a release on the car to Customs.

Under the current procedure, Hardy said, the car often is long gone by the time the EPA has reviewed the test data.

The AICA proposal also calls for commercial importers to provide a five-year/50,000-mile warranty on emission equipment and include evidence of such a warranty with the test data.

Hardy said AICA will also fund a self-policing program which would include a sticker issued by the association to certified labs to be placed on vehicles tested and found in compliance with applicable regulations.

AICA would also do its own spot-testing of vehicles during the 10-day hold period and establish guidelines for withdrawing AICA stickers if violations are discovered.

All test data and sticker revocation actions would be reported to the EPA and the association would require a substantial performance bond from AICA-approved labs. That bond would be forfeited if the sticker were revoked.

• Robert McElwaine, president of the American International Automobile Dealers Assn. (AIADA), said he finds all four of the options proposed by the EPA unacceptable.

He told the San Diego meeting that Congress, when it passed the Clean Air Act, "never intended to permit wholesale importation of non-conforming vehicles."

"Has the agency carried out the law as mandated? The answer is a resounding no," McElwaine said.

In allowing non-conforming vehicles in the U. S. with the provision that they be brought up to clean-air standards, McElwaine said, "EPA has compounded this perversion of the law."

He suggested that the EPA consider "the unspoken fifth option, enforcing the law as written . . . permit no vehicle to be imported unless accompanied by certification from the original manufacturer."

He warned that if EPA doesn't close the loophole, "Congress will."

Tom Claridge, owner of Claridge's, Ltd., a Fremont (Calif.) Mercedes-Benz dealer, said his service department turns away two or three gray-market cars a day that need work.

Claridge said his dealership refuses to work on these cars because "we are not allowed to modify emission control systems." Most of the problems are with emission controls installed by importers or vehicles with no emission control system, he said.

"The only solution is to only allow the manufacturer to certify and warrant the car," he said.

Donald Drachand, chief of mobile sources control for the California Air Resources Board, called on EPA to close the loophole, indicating that gray-market imports "now exceed some models imported by certain manufacturers."

He estimated that one-third of the gray-market cars in the U. S. end up being operated in California.

Service Index climbs, but at slower rate

Continued from Page 1

the Service Index registered increases in October, led by sales of all parts and accessories, up 17.1 percent over the volume attained in the previous year.

• Gross profit on all labor, parts and accessories — the most important indicator from the dealer's viewpoint — topped *last year's figure by 12.6 per*cent, while shop parts sales, those used on both customer-paid and warranty work, jumped 11.6 percent above the volume recorded last year.

Total labor sales (customer-paid and warranty) were up 9.9 percent over the volume last year, while repair orders written in dealershop shops escalated 2.5 percent over the number written in the same month a year ago.

Figures used in the Service Index are averages compiled from reports on shop operations from a cross-section of the nation's new-car dealers.

For the 10-month period of 1983, service and parts business was 109.4 percent of the volume for the same period a year ago.

Sales of parts and accessories showed an increase of 11.5 percent, while gross profit was up 11.2 percent, and shop parts sales advanced 10.5 percent.

Labor sales increased 8.5 percent for the January-October period, while repair orders written were up 2.7 percent.

SERVICE INDEX

111.6*

	Oct., '83 vs. Oct., '82	10 mos., '83 vs. 10 mos., '82
Gross Profit on All Labor and P&A Sales	+12.6%	+11.2%
Repair Orders Written	+ 2.5%	+ 2.7%
Total Labor Sales (Customer & Warranty)	+ 9.9%	+ 8.5%
Shop Parts Sales (Customer & Warranty)	+11.6%	+10.5%
Sales of All Parts and P&A	+17.1%	+11.5%

*—Survey by Automotive News shows that dealers' service and parts business in Oct., 1983, was 111.6 percent of business in Oct., 1982. Service business in the 10 months of 1983 was 109.4 percent of business in the corresponding period in 1982.

breaking news

Curcio named Mack chief executive

ALLENTOWN, Pa. — John B. Curcio, 48, president and chief operating officer of Mack Trucks, Inc., since 1980, has been named chief executive officer, effective Jan. 1. He succeeds Alfred W. Pelletier, who will continue as chairman. Pelletier said the promotion will allow Curcio to take over the company's long-range planning prior to Pelletier's retirement. Pelletier will be 62 in January.

Honda recalls 61,000 '84 Accords, Civics

WASHINGTON. — Honda is voluntarily recalling 61,000 '84 Accord and Civic models for safety-related defects. The Accord recall involves 48,000 cars for a faulty voltage regulator which Honda believes may be on fewer than one percent of the units. A defective safety catch on the hood latch system prompted the recall of 10,421 Civic CRX and hatchback models. Also, Honda said, "less than 2,900" Civic 1300 hatchbacks are being recalled to check a possible faulty left side shaft which, under certain high-stress conditions, may break and cause sudden loss of power.

News roundup

GM recalls 161 school buses

DETROIT. — General Motors is recalling 161 Chevrolet and GMC 1982 and 1983 school buses to inspect the moisture ejector valves in the vehicles' dual air-braking systems. GM said some of the valve assembles may have improperly torqued bolts, which could break, allowing the valve to loosen or separate and leak air from an air-supply tank in the brake system.

Dana UAW reach agreement

DETROIT.—The UAW and Dana Corp. have reached a tentative agreement in principle on a new three-year contract. The agreement covers 7,000 Dana workers in 15 facilities in Ohio, Indiana, Illinois, Michigan and Pennsylvania.

Ford to add capacity to Rouge Steel

DEARBORN.—Ford Motor Co. will build a $200-million continuous casting plant with annual capacity of 1.8 million tons at its Rouge Steel subsidiary. The move will make Ford's steel-making facilities strongly competitive and among the most modern in the U. S., Chairman Philip A. Caldwell said. Rouge Steel began shutting down earlier this year but stopped when employes accepted contract concessions.

GM-UAW program brightens holiday

DETROIT.—Thousands of needy families in the Detroit area had food for Thanksgiving as a result of presentation of a $100,000 check by General Motors and the UAW as a "fast start" advance of the Christmas Care and Share program. The check was presented to the Gleaners Community Food Bank, a nonprofit agency which made more than 250,000 meals available to hungry families in the area, by GM Chairman Roger B. Smith and UAW Vice President Donald F. Ephlin. The Christmas Care and Share program is under way in 75 communities where GM has plants. GM employes are encouraged to donate food or cash and GM matches the gifts.

Water injection favored at Buick

FLINT.—Buick has designed a water-injection system for its 3.8-liter turbocharged V-6 engine. The division would use this system, rather than an intercooler, to improve the performance of its turbo V-6 engine, according to Lloyd Reuss, divisional general manager.

Chrysler Marine purchased by Washington boat firm

DETROIT. — Chrysler Corp. and Bayliner Marine Corp., of Arlington, Wash., have reached agreement for Bayliner to purchase Chrysler's Marine and Industrial Products Operations.

Chrysler manufactures and markets a complete line of outboard motors, gasoline and diesel-powered inboard and inboard/outdrive marine engines and industrial engines. In addition to its nationwide distribution network, products are sold under private and brand-label names through independent retail outlets.

Outboard engines are engineered and manufactured in Hartford, Wis. Leased facilities are used to manufacture marine and industrial engines in Beaver Dam, Wis., about 30 miles from Hartford. Marketing and administrative offices are in Warren, Mich.

Chrysler will continue to sell unmodified engines for industrial purposes to original equipment manufacturer customers on a direct-ship basis.

The outboard-motor facilities in Hartford were purchased from West Bend Co. in January, 1965.

Bayliner is a privately held boat-building firm with eight U. S. manufacturing plants. The corporation produces power boats marketed under the "Bayliner" name in sizes from 16 to 45 feet.

Bayliner pioneered the development of boat packaging, which includes boat, motor, trailer and accessory as an integrated unit and which utilizes private-branded engines heretofore built by Chrysler.

Dutch-built Volvo seems targeted for U.S. market

Continued from Page 7

the exchange rate, for example," he explains.

"The exchange rate of the Dutch florin to the U. S. dollar has moved to 2.90, when a few years ago we had 1.90. Sometimes people think when you state an ambition and don't fulfill it there's been a fundamental change of your plans. It's other factors which can influence decisions."

When Volvo Car builds its 100,000th car this week (Dec. 12-16) it will have achieved its first objective. It will break even this year following several years of reducing losses and will achieve around 1 percent of the European new-car market.

The company is now tackling the second phase—building up to around 130,000 annual output. But it will not mean substantial profits, as it will be investing heavily in product, plant and dealer development, says Deleye.

'84 Cadillacs "Extended Body" Limos

☆ *Also '84 Lincoln Limos*

"AMERICAN CUSTOM COACHWORKS, LTD."

☆ $32,500 ☆

When you want the very best value and quality, then you definitely must "talk to us before you buy elsewhere." Our prices start at only $32,500 and you can choose from cars in production or place your order to build a limousine to your specs or you may choose from an inventory of 39 limos of different sizes, models, prices, etc. Cars may be ordered with electric rear moon roof, chauffeur divider window, rear A/C, intercom, color TV and console, rear stereo/tape, electric bar, prem. tires, custom interior, heavy duty suspension, etc., etc.

On 1983 domestic models

Automatic 5-speeds made gains

By Joseph Bohn
Marketing Editor

Automatic transmissions held their own and even picked up a little steam on '83-model domestic cars, while five-speed manuals increased sharply.

Overall, 5,197,867 cars, equal to 86.94 percent of the total, were equipped with automatic transmissions in '83. That was up from an 84.10 percent penetration the previous year.

At the same time, five-speed manuals accounted for 420,021 units, or 7.03 percent of industry output. That was up from a 1.20 percent penetration in '82.

Four-speed manuals, meanwhile, dropped to 360,872, or 6.03 percent of industry output, compared with a 14.70 percent penetration the previous year.

Ford's Tempo/Topaz have boosted — and will continue to boost — the percentage of five-speeds installed. Ford recently launched an incentive designed to boost five-speed Tempo sales. Obviously, it wants even more than the 26.40 percent penetration of five-speeds that it had on Tempo.

Combined with four-speed manual, some 27.40 percent of Tempos were equipped with manual transmissions during the brief '83 model build. (The cars officially debuted as '84s.)

Cavalier is another car that is expected to boost five-speed penetration. It accounted for 12.70 percent of Cavalier production in '83. Chevrolet hopes to make Cavalier the No. 1 seller in '84, which should increase the industry for five speeds.

• Cars like Alliance (38.60 percent penetration) and its '84 companion, the Encore — along with EXP (69.90 percent) and the new Fiero are similarly expected to boost five-speed manuals in '84.

Automatic transmissions, meanwhile, continued to be popular, primarily because of the resurgence of full and intermediate-sized cars, where they are standard. Automatics were standard on 30 industry car lines in '83 — three fewer than last year.

The new Corvette features a four-speed alternative, whereas previously it had automatic transmission as standard. Cougar, when it became the Marquis, stopped offering automatic transmissions as standard in '83.

The phaseout of Chrysler's Imperial, Cordoba and Mirada, all of which carried automatic transmissions, also reduced the number of lines standardizing this item.

Metal group sells video course on testing methods

METALS PARK, O.—Fundamentals of Nondestructive Testing, a new videotape educational course, is available through the Education Department of American Society for Metals (ASM).

The tapes are illustrated with demonstrations, animation and specially prepared diagrams and photography.

Charles Hellier did the instruction and narration for the tape series. Hellier is operations manager for Brand Examination Service and Testing Co., Essex, Conn., and is a certified level III registered professional engineer.

A special preview tape features highlights from lessons on each of the major nondestructive testing methods and has an introduction by Dr. Robert C. McMaster, regents professor emeritus, College of Engineering, Ohio State University.

The preview tape is available from the ASM Education Department for $95.

Carolina county accused by EPA

WASHINGTON. — EPA has charged the County of Greenville, S. C., with violating the Clean Air Act by using leaded gasoline in vehicles with emission controls that need unleaded fuel.

A civil penalty of $630,000 for 90 specific instances of misfueling is being asked. The county operates a fleet of more than 600 vehicles.

The law bans fleet operators, dealerships and any commercial repair shops from disabling emissions controls, with a fine of $2,500 per vehicle.

TRANSMISSION OPTIONS on 1983 U. S. Models

FORECAST '84

Photo by Jim Piegue. Cover design by Ian Stewart

U. S. auto market will be shaped by supply in '84

By Kathleen Hamilton
Financial Editor

For the first time since 1978, the U. S. auto market in 1984 and 1985 will be shaped not by consumer demand but by supply.

And because of constraints arising from corporate average fuel economy (CAFE), plentiful gasoline, import quotas and capacity limits at suppliers' and makers' plants alike, U. S. car production forecasts of AUTOMOTIVE NEWS WORLD OUTLOOK, generated by Data Resources Inc., have been scaled back.

However, North American new car and truck sales and production far outpace gains expected next year in Japan, Europe and the rest of the world.

The U. S. auto sales forecast calls for an increase of 14 percent, to 10.40 million. Truck registrations are expected to climb 18 percent, to 3.65 million, after a 21-percent gain this year, in what has been a subnormal truck year.

Added together, U. S. vehicle sales in 1984 are expected to reach 14.05 million, 15 percent more than this year's 12.25 million cars and trucks.

Canadian car sales are expected to outpace even the U. S. leap by climbing 17 percent to 993,000.

Elsewhere, auto gains will be more modest: 2 percent in Germany and 5 percent in Italy (offset by losses of 4 percent in France and 6 percent in the United Kingdom for a negligible loss in the EEC total and a miniscule gain for all of Western Europe; 3 percent in Japan; 8 percent in the other Asia-Pacific countries, and 5 percent in both Latin America and Africa including the Middle East.

Interviews with chairmen begin on Page E-5.

Worldwide the auto market is expected to climb 7 percent next year, then settle into four years of 2 and 3 percent gains.

For 1985 it appears the minimal 2 percent gain in the North American auto market will fall below the worldwide average gain of 3 percent.

But the good news first: The big leap expected in 1984 in North America.

"The nation's economics are very good. Everything looks quite strong. In fact, it's difficult to find anything negative in the next six to eight months," said John Hammond, DRI director of automotive services.

Consumer confidence is high. Buyers are willing to take on debt. Both the number of people employed and the hours they are working are increasing.

Inflation will remain moderate—in the 4-percent range. Auto prices will rise only slightly more than the general inflation rate. And interest rates should remain in a range one point above or below today's rates, Hammond predicted.

All those expectations promise lots of consumer sales, but Hammond is even more bullish about business purchases: The recovery next year will be led

Continued on Page E-2

Outlook

Continued from Page E-1

by businesses filling up their unused capacity, he predicted.

Then, late in 1984 or early in 1985, according to this outlook, the U. S. economy will become so strong that business and consumer credit demands will begin to conflict with government borrowing. Interest rates and inflation will increase.

While all these things are happening on the demand side of the equation, on the supply side, auto makers will be running their plants flat out in 1984, Hammond predicted.

Bottlenecks throughout the year—especially in the high-demand full-size cars — will limit production and sales.

But the latest U. S. car outlook for 1984 is only a hair less than the last quarterly AUTOMOTIVE NEWS WORLD OUTLOOK projection. A more significant scaling back has been done for 1985, which is now predicted to end up 4 percent below the level expected three months ago.

The less robust economy is one reason 1985 car sales are expected to reach only 10.6 million (still the highest since 1979), according to Hammond. But, again, supply, will play a major role.

"Manufacturers will have the ability to change sourcing," he said. "The question is: Will they want to do it?"

Faced with potential CAFE fines in 1985, GM and Ford won't want to produce as many large cars as consumers will demand.

The supply of Japanese imports will continue to be restricted at least through April, 1985. That will cut into the sales of GM as well as the traditional Japanese importers, since GM had planned on importing 300,000 Suzukis and Isuzus in 1985. Its allocation for 1984-85 has not yet been determined by the Japanese government.

Fuel prices are expected to rise in 1985 in response to the strengthening of the worldwide recovery and resultant demands for energy, Hammond said. Both the vehicle-sales total and the mix should be affected.

Finally, 1985 car sales will be reduced by consumers who switch from large sedans and station wagons to minivans.

"If Chrysler is right and 85 percent of its (T-115) market is from station wagons, minivans could take 200,000" out of the station wagon total by 1985, Hammond said.

Indeed, the small-truck-and-van market looks like the place to be for the rest of the forecast period. This year, sales in the segment will more than double the 1980 level. By 1985, they are expected to rise by almost another 40 percent.

Stable fuel prices, the business recovery, the products' fuel efficiency and appeal to a whole new market all combine to produce a rosy outlook for the small trucks, utility vehicles and vans.

Chrysler is the first to market with its garageable T-115 wagon/vans, Dodge Caravan and Plymouth Voyager. Toyota also has its new seven-passenger Van Wagon on the U. S. market this year, but is importing it as a car, so it will be severely limited by import quotas.

Similarly, the car-sized Dodge Colt Vista, imported from Mitsubishi in Japan, is expected to have little impact on the U.S. minivan market this year because of quotas. Chrysler Corp. has scheduled only 7,000 for 1984, but the number may be increased.

GM, Ford Motor Co. and Nissan are expected to join the minivan fray by 1985, giving the minivan 8 percent of the light-truck market.

This year, small trucks and vans are accounting for 9 percent of all U. S. vehicle sales; by 1985, they are expected to take 11 percent of the expanded market. Indeed, this single small-truck - and - van segment will make up nearly all the gains in the truck sector through the forecast period.

Expectations for the conventional light-duty trucks and vans are far more modest. The gains in the small-truck seg-

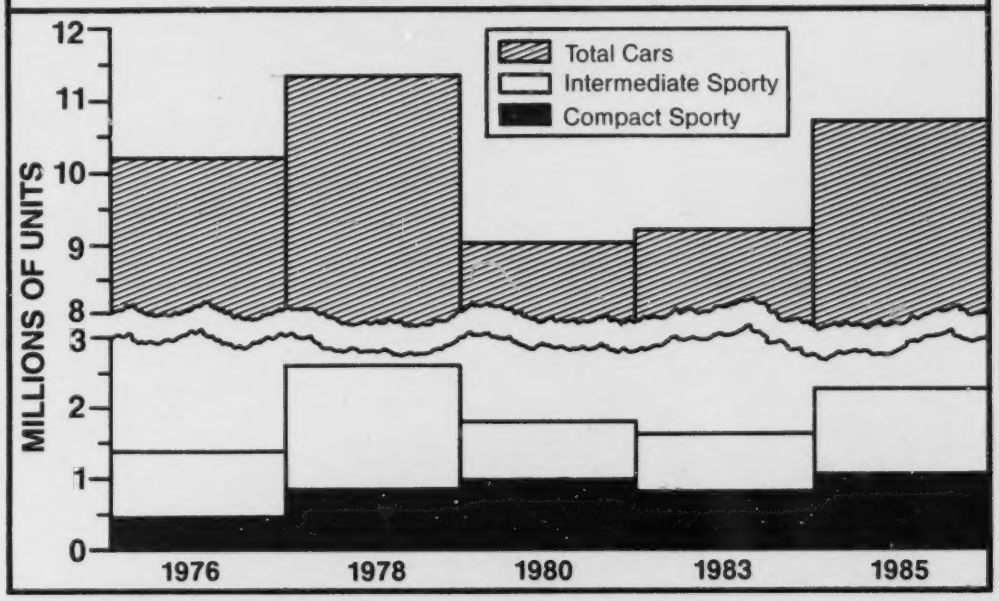
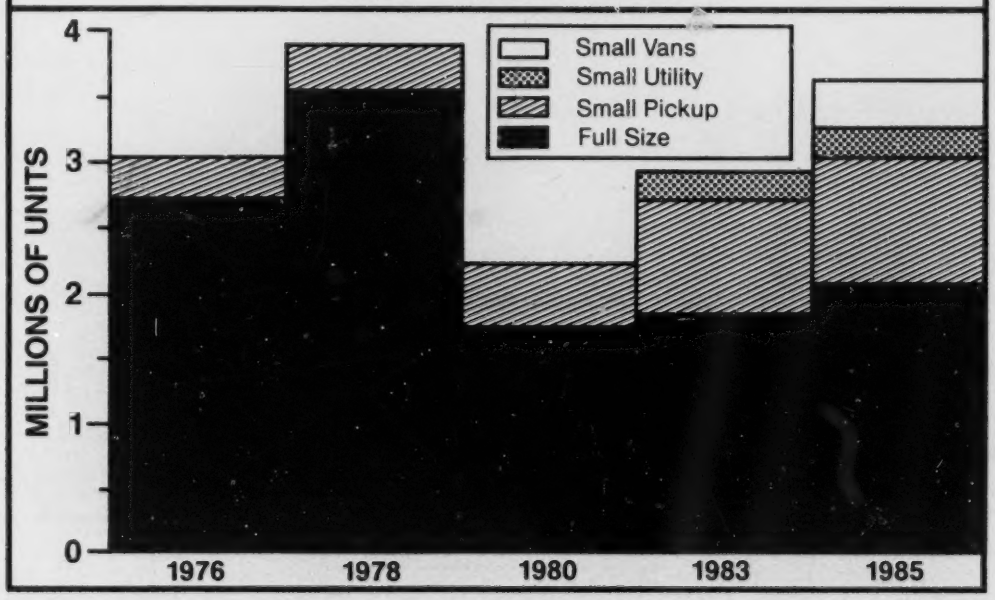
MIDSIZE SPORTY—CAR SALES



Sporty-car sales in the U. S. will continue to closely track the entire car market, increasing as much because of increased availability ofsporty cars as because of consumer preference for performance cars.

LIGHT—TRUCK SALES



Growth in the small truck-and-van segment in the U. S. will greatly outpace growth in car and total truck segments, prodding light-truck sales to within a hair of their records in the late 1970s.

Outlook

Continued from Page E-2

ment will look even better when compared to the car sectors, which will be restrained by supply, Hammond pointed out.

Through 1988 (and including this year), the AUTOMOTIVE NEWS WORLD OUTLOOK calls for U.S. truck growth averaging 9 percent, compared to U.S. car-sales growth of 7 percent and to European truck-sales growth of 0.5 percent, including losses in 1983 and 1984.

"Heavy trucks will start to recover but will not reach previous records by any stretch of the imagination," DRI's Hammond said. Responding to the business recovery, Hammond's computations show slow increases for the medium- and heavy-duty trucks at least through 1986, he said.

Japanese-truck sales will set new records, but their share of the light-truck market will be reduced by three factors, according to Hammond:

1. Strong competing products made in the U.S. and therefore not subject either to quotas or the 25-percent import tariff on trucks;
2. Nissan's move to Tennessee, where it can produce up to 120,000 "domestic" trucks a year;
3. Domestic makers dropping their captive imports.

One of this year's emerging trends has been toward sporty cars: Corvette, Shelby Charger, Thunderbird and Cougar were the big news in the 1983 model year.

In 1984, Fiero, Daytona, Laser and the all-new Nissan 300-ZX compete for the sports-car-buyer's attention.

In 1985, the giant GM N-car program will kick in, replacing the Grand Prix, Cutlass Supreme and Regal — intermediates with a sportier image.

Once again, Hammond sees this trend as led by the supply side, not by any sudden surge in demand for performance vehicles.

"Demand was always there" for sporty cars, he said. It was just up to the makers to fill it.

Stable fuel prices didn't hurt, of course.

The performance market plummeted with the instability of gasoline availability in 1979.

The sporty-car chart on Page E-2 doesn't really illustrate just how deeply the performance-car segment was affected because GM's small, fuel-efficient Monza-Sunbird-Skyhawk-Starfire, classed with the sporty compacts, was in high demand. The J-car replacements were not sporty cars, so the sporty-car total plunged with J-car introductions in 1980.

That illustrates Hammond's thesis that people will buy sporty cars when they are available. In 1985, he expects the sporty GM N-cars will draw their market not only from those who would have bought predecessor models, but from Camaro and Firebird intenders who decide to instead buy GM's newest cars.

That, of course, will reduce growth in the sporty-compact segment.

The outlook for next year calls for imports to maintain their current share of the car market. Hammond said he expects the Europeans will improve their sales by a significant percentage, although the actual numerical increase will be insignificant in terms of the entire U.S. car market.

As for some auto makers' oft-expressed hope that the reemployed and low-seniority workers will re-enter the market next year, looking for low-priced new cars, Hammond is cautious.

"To some extent that will happen next year, but we don't have it happening to a great extent. There will be an improvement, not a surge," he said.

But because of production limitations in the larger-car segments, the small-car segment could experience a disproportionate increase in market share, he said.

Europe's recovery has slowed in the second half of this year, and the outlook for 1984 is for virtually no improvement in the sales total for Western Europe next year.

DRI Europe economist John Lawson noted 14 of the 16 European car markets will be growing next year, with the economies of Austria, Denmark and Norway showing particular strength. But losses expected in the UK and France will offset the mild gains elsewhere in Europe.

Car sales will decline in 1984 in the UK because fierce competition for the market this year pushed sales to unnaturally high levels. In France, the downturn will be attributable to government austerity measures.

But a steady European market next year won't mean steady profits, Lawson said.

Cutthroat competition for sales, worsened by the Japanese import penetration, now about 10 percent of European car sales, has already drastically cut European auto makers' profits.

"It is fast becoming a cash-flow problem for many companies," Lawson said. Product development is in jeopardy in some cases, he said.

Saviors so far have been the governments, which have helped bail out BL, Renault and Alfa Romeo. The Spanish government has offered all makers within its boundaries low-interest loans, Lawson said.

Banks have been lending to auto makers on cautious terms, as well. The U.S. car market has provided some relief for lower-volume high-line makers. It will continue to do so next year, Lawson said.

As in the U.S., the high end of the European market is doing best in the recession, especially in Germany. That, too, has been favoring the lower-volume, high-line makers.

But they will be getting competition soon from the high-volume makers.

"It may not be a 1984 story; it may be a 1985 story," Lawson said. Renault's forthcoming R-25, a new top-of-the-line Ford, the Saab-Lancia cooperative cars and the Fiat-Alfa Type Four will soon be entering the large-car segment in Europe.

And the upscale segment will continue to be the best European market, at least through 1985. With Lawson's figures showing unemployment reaching an expected peak of 11 percent in 1985, the mass market is expected to suffer.

Toyota's new Van Wagon, with seating for seven, is restrained this year by import quotas.

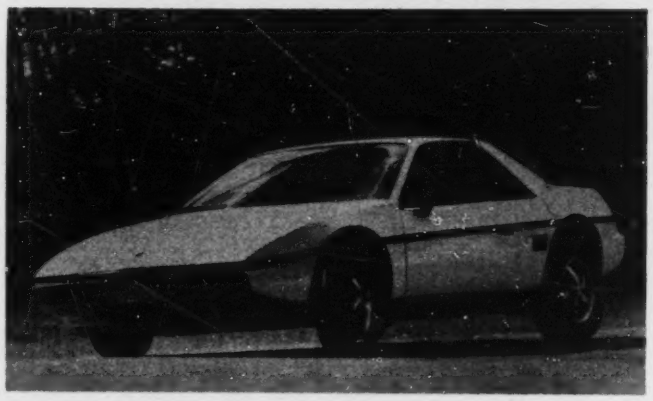
Nissan introduces its third-generation Z-car, the two-plus-two 300-ZX, in the U.S. performance segment.

The downsized Jeep Cherokee bows this year in a new segment that promises good growth: Small utility vehicles.

The Dodge Daytona Turbo, here, and its sister Plymouth Laser, are Chrysler's 1984 answers to Camaro and Firebird.

Sized more like a small station wagon than a minivan, the new Dodge Colt Vista is made by Mitsubishi.

This year the minivan market will belong to Chrysler, with its Plymouth Voyager (shown) and Dodge Caravan.



Pontiac enters the sporty compact segment this year with its two-place plastic-bodied Fiero.

Economy growth is seen slowing in fourth quarter

COLUMBUS, O. — During the fourth quarter of 1983, the U. S. economy's growth will slow to 3.5 or 4 percent, from the third quarter's real GNP growth of 5 percent, according to James Newton, author of two studies published by Management Horizons.

Newton said that 1984 is anticipated to post favorable growth of between 4 and 4.5 percent each quarter.

In the longer run, he said, the U. S. economy is projected to expand slowly during 1985 and 1986, before succumbing to downward cyclical pressures during 1987.

'84 Lincolns "Extended Body" Limos

☆ *Also '84 Cadillac Limos*

"AMERICAN CUSTOM COACHWORKS, LTD."

☆ $32,500 ☆

When you want the very best value and quality, then you definitely must "talk to us before you buy elsewhere." Our prices start at only $32,500 and you can choose from cars in production or place your order to build a limousine to your specs or you may choose from an inventory of 39 limos of different sizes, models, prices, etc. Cars may be ordered with electric rear moon roof, chauffeur divider window, rear A/C, intercom, color TV and console, rear stereo/tape, electric bar, prem. tires, custom interior, heavy duty suspension, etc., etc.

Nearly $1,000 more on units tagged above $20,000

Luxury-car insurance loss higher

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Cars selling for more than $20,000 cost insurance companies an average of nearly $1,000 more to repair than the average of all cars combined, according to the Highway Loss Data Institute.

The average loss payment per claim on expensive cars is $2,300. All passenger cars combined average a loss payment per claim of $1,370.

Claim frequency for luxury automobiles is about the same as other cars, the insurance industry study group reports. All passenger cars result in 9.1 claims per 100 insured vehicle years, while luxury cars report 9.0 claims per 100 insured vehicle years.

The report covered collision insurance results on expensive car models from 1981 to 1983. The results were not adjusted for differences in drivers' age or deductible amounts.

Of the 27 models surveyed by the HLDI report, the Ferrari 308-GTSi had the highest average annual loss payment claim — $7,456. The Mercedes-Benz 240-D had the lowest average loss payment claim — $1,672.

The second, fourth, sixth and seventh poorest cars in terms of collision costs were built by Porsche. The 928 Coupe cost an annual average of $3,463 to repair. The 924 Coupe cost $2,550 and also had the highest claim frequency of the cars surveyed. The Porsche 911 Coupe cost an annual average of $3,782 to repair, but had a below-average frequency of claims. The 944 Coupe cost $2,833 to repair, but like the 928 and 924, had a higher than average incidence of claims.

The BMW 633-CSi ranked third worst in the collision coverage results for expensive models. The 633-SCi cost an average loss payment per claim of $3,596. The car had the fourth highest claim frequency per 100 insured vehicle years. The other two BMWs surveyed — the 528e and the 733i — also had above-average claim frequency results.

Cadillac Seville, Lincoln Continental, Lincoln Mark VI — 2-door and 4-door, fared comparatively well, being far down on the collision repair cost list.

The Mercedes-Benz 300-SD, 300-TD SW, and 300-D ranked just behind the domestic makes in the repair-costs-to-collision frequency ratios.

The Mercedes-Benz 300-CD, Jaguar XJ-6, Mercedes-Benz 380-SEC, Chevrolet Corvette, Mercedes-Benz 380-SL, Rolls-Royce (all models), Mercedes-Benz 380-SEL, Lancia Beta Coupe, DeLorean and Jaguar XJS were ranked in the middle range of the $20,000+ class in terms of collision repair costs.

British arts group cites Pininfarina

LONDON. — Britain's Royal Society of Arts (RSA) has named Sergio Pininfarina as "an honorary royal designer for industry."

Thirty years ago, his father received the same distinction—a fact unique in the history of the RSA (founded in 1754).

Past auto industry recipients include Colin Chapman (Lotus), Sir Alec Issigonis (designer of the Mini), Sir William Lyons (Jaguar), Alex Moulton (inventor of BL's hydrolastic suspension) and U.S. designer Raymond Loewy.

Silver Smith

Lowell Smith, right, Smith-Reynolds Chevrolet-Oldsmobile, Eldorado, Ill., receives his 25-year-dealer award plaque from J. C. Branch, Chevrolet St. Louis zone manager.

VIRGINIA

AUTO AUCTION MANAGER

Tidewater Auto Auction, located in Norfolk, Virginia, offers excellent opportunity to individual seeking to improve personal financial status.

Qualified Auto Auction Manager who desires to guide Tidewater Auto Auction from current level of operation to a maximum level which could include expansion of operations may expect Good Salary plus an excellent Bonus arrangement.

Interested candidates should contact **George E. Hamilton, Jr. (804) 357-4321,** or send Resume to **George E. Hamilton, Jr.,** Smithfield Packing Company, Inc., P. O. Box 447, Smithfield, Virginia 23430.

TODAY'S USED CAR BUILDS TOMORROW'S PROFITS

Desirable, top quality late-model *used cars.* The kind that build profits when new car sales are sluggish. They're what you need to stay competitive in today's market. They're what you'll find at your nearest Manheim Auction.

The Manheim Auctions system attracts the best dealers . . . and the best previously owned cars. It's the perfect way to balance your inventory and adjust your used car mix for maximum sales. It's the perfect way to give your customers exactly what they want—a blend of new and used cars in every price range.

The times are changing. And the best way to change with them is to become a regular at a Manheim Auction . . . every week.

SYMBOLIZING TRUST AND SERVICE SINCE 1945.

COX Communications, Inc.

letterbox

Continued from Page 10

car and the owner of the company is being prosecuted by the State of California.

Losses to depositors are thought to be as much as $150,000. The company is now advertising in Southern California papers.

In another example, one of the largest non-compliance dealers has been caught selling Volkswagens it claimed were "federalized." Volkswagen of America bought several of these cars to see what work had been done. While VW was in possession of the cars, the federalizer claimed to be doing work on the cars. VW found no significant work had been done to the cars, whereas the customer had been charged more than $3,000 for the work. Cars not federalized will in the future be caught up in the California emission test system, just passed into law. The car would then have to be brought into compliance, requiring further expense.

Service: While all conscientious Mercedes-Benz dealers will attempt to offer top-quality service to any Mercedes-Benz owner, it may not always be possible to offer such service. Much of the equipment on non-compliance modified cars is non-Mercedes in origin with the source of these parts unknown to the servicing dealer. Many of the real Mercedes-Benz parts and or equipment may not be available through the U.S. parts system due to not being standard equipment on U.S. versions.

An example would be the before mentioned ABS braking system. Other examples would be a different fuel injection system, different engine parts, manual AC system, manual windows, bumpers, electrical system, lights, and emission control systems.

Mercedes-Benz cars are as highly respected as they are due to the high quality of manufacture, durability and superb engineering. Is an automobile still a Mercedes-Benz when a substantial number of factory parts have been removed or modified and when many non-Mercedes parts have been added to the car? We think such a car is no longer fully a Mercedes-Benz nor will it fully live up to the high expectations of our demanding customers.

Resale value is a prime consideration in the purchase of any expensive car. Mercedes-Benz automobiles have traditionally held their value better than other cars. Indeed, resale value has been such that a Mercedes-Benz car often costs less to own than many lesser cars.

There is a wide spread reluctance on the part of the public to purchase used non-compliance automobiles of any make. Additionally, authorized Mercedes-Benz dealers, for both legal reasons and those enumerated here will not buy or sell non-compliance cars. An investment that both the public and Mercedes-Benz dealers reject is at best questionable.

Laws and legislation exist that limit the sales and registration of non-compliance vehicles of any kind. In California, an owner may not register a new (under 7,500-miles) car unless emission and safety certified by the car manufacturer. Some non-compliance dealers have resorted to illegally rolling forward odometers. This is against state and federal law and carries heavy penalties.

The Environmental Protection Agency is now reviewing the rules which have resulted in this chaotic situation and the harming of uninformed buyers. In addition, there is a bill before Congress requiring EPA to return to the proper enforcement of the prohibition of importation of any car unless certified by its manufacturer. Both of these laws/rules are expected to pass and be put into effect with little advance warning. Should that happen, any car received in U.S. ports would be turned back to Europe.

Shipping is another very important consideration in comparing non-compliance cars with U.S.-equipped Mercedes-Benz. Mercedes-Benz of North America has an elaborate transportation system combined with final quality control and final detailing in U.S. vehicle preparation centers. No matter how carefully controlled shipping is, some cars do get damaged. Mercedes-Benz cars coming through the U.S. equipment systems are damage-surveyed and repaired to Mercedes-Benz standards by Mercedes-Benz factory employes in an extension of the Mercedes-Benz assembly system.

The cars are detailed fully to Mercedes-Benz standards and are covered entirely by the factory warranty.

Non-compliance cars are brought into the U.S. by many shipping means. Some of those cars suffer slight to considerable damage. Because the dealers selling the non-compliance cars are for the most part small independent dealers such a damaged car must, for financial reasons, be fixed and sold immediately. Any such paint or bodywork may or may not be of top quality.

In any case, it is not covered by any Mercedes-Benz factory warranty. The durability and long-term appearance of any such repair must be considered also. Any such damage and or repair may not be readily apparent to the prospective purchaser.

Cost of ownership is more complicated than merely the selling price of a product.

In addition, we feel the prospective owner should think long and hard as to whether he or she would want a Mercedes-Benz that is not entirely a Mercedes-Benz, any more than that person would want a Rolex watch with a Timex movement or an imitation Gucci handbag made in Bangkok. Our product stands as the most outstanding automobile available but remains so only as long as the entire car is genuine Mercedes-Benz. — **Thomas H. Claridge,** President, Claridge's Ltd., Fremont, Calif.

Total tops 780,000; surpasses last year

Month's new-car sales rebound

Continued from Page 6

VW was up to 1.35 percent from 1.21 percent. Honda's share of the 1983 market was 0.98 percent in November.

Buick reported record November sales and Cadillac boasted its 15th consecutive month with a year-to-year increase. Buick was up 1.81 percent, to 74,309 from 72,986 last year. Cadillac was up 8.40 percent, to 29,083 from 26,832.

Chevrolet was off 10.14 percent for the month, Oldsmobile was up 3.82 percent and Pontiac was up 8.97 percent.

• At Chrysler Corp., Chrysler was up 35.64 percent, Dodge was up 9.37 percent and Plymouth was off 8.15 percent.

Ford climbed 13.55 percent, Mercury was up 23.62 percent and Lincoln sales dropped 14.36 percent in November.

American Motors' domestic Renault sales nearly doubled, growing to 15,168 from 7,590, while AMC products were down 41.48 percent. VW was up 17.68 percent and Honda had no year-ago sales with which to compare this November's figure. Imperial sales no longer are reported by Chrysler Corp.

With 25 selling days in the month both this year and last, the daily rate of 23,621 was up 5.80 percent from 22,326 in 1982.

Among the imports, Jaguar notched another monthly record in November, thereby completing three years of steady, record-setting growth. Last month, 1,656 new Jaguars went to U. S. customers, up 19.65 percent from 1,384 a year earlier.

Mercedes-Benz, BMW, Saab and Volvo all had record sales in November. Audi was up 26.77 percent, Porsche was up 52.60 percent and imported Volkswagen cars were up 19.72 percent. Toyota was up 1.51 percent, Nissan dropped 7.73 percent, imported Hondas were off 7.45 percent, Mazda was down 11.90 percent and Subaru was down 10.65 percent. Peugeot was up 48.73 percent.

Imports claimed 24.36 percent of the total U. S. market in November, down from 24.90 percent a year earlier but up from 22.80 percent in October. Record share for imports in November is 26.16 percent, achieved in 1981.

In addition to the 24.36 percent of the market enjoyed by imports last month, U. S. intermediates accounted for 26.87 percent, compacts had 16.98 percent, subcompacts had 13.35 percent, standards had 12.20 percent and luxury models captured 6.24 percent.

Intermediates held 35.53 percent of the November domestic market, compacts had 22.45 percent, subcompacts had 17.65 percent, standards had 16.13 percent and luxury cars accounted for 8.24 percent.

Domestic sales were up 37.05 percent during the last 10 days of the month, growing to 217,540 from 158,727 in 1982. Eight selling days this year yielded a daily rate of 27,193 compared with 22,675 for each of seven selling days a year ago.

For the period, GM was up 37.14 percent, Ford was up 32.36 percent, Chrysler was up 14.25 percent, AMC was up 118.05 percent and VW was up 65.18 percent.

GM claimed 59.46 percent of the domestic market for the period, Ford had 23.42 percent, Chrysler had 10.21 percent, AMC had 3.91 percent, VW had 1.96 percent and Honda had 1.04 percent.

NHTSA finds possible danger in Fenton wheels

WASHINGTON. — A California manufacturer's cast-aluminum auto wheels may be dangerously defective, NHTSA has said in an initial determination.

Fenton Mfg. Corp.'s Gyro and R.T. custom wheels could crack or break while the car is on the road, the agency said. Furthermore, the wheels could explode when tires are being inflated and mounted, it said.

Fenton, Gardena, Calif., manufactured some 650,000 Gyro and R.T. wheels between 1969 and 1981, when it stopped. NHTSA, which started its investigation of Fenton wheels in July, 1982, said it knows of 14 reports of serious accidents involving the wheels, including three deaths.

NHTSA will hold a public hearing on the matter Jan. 17 in Washington. Those interested in presenting information at the meeting should contact Joyce Tannahill at (202) 426-2850.

Daihatsu eyes exports to U. S.; quota is problem

TOKYO. — Daihatsu said it wants to export cars to the U. S. but does not know whether it can under current export quotas.

Daihatsu, 10 percent owned by Toyota, wants to export its 1,000-cc Charade model starting in 1985. But it has no allocation under the quota because it did not ship cars to the U. S. before the quota began in 1981.

Toyota is seen as unwilling to give up part of its quota to Daihatsu. Daihatsu's smaller, cheaper cars would not fit into Toyota's strategy to ship its larger and more expensive cars to the U. S.

Suzuki Motor Co., also shut out of quota, hopes to receive an allocation to export cars on April 1, 1984. The allocations for '84 exports have not yet been made.

Makers build 650,092 in November

Month's car output best in 5 years

By Mary Beth Mayer
Staff Writer

In November, the domestic auto makers built 650,092 units — the highest total for that month since 1978, when 862,127 were finished.

November's total led the year-ago month's sum of 404,542 by 60.74 percent.

Last week, the manufacturers scheduled 173,779 cars, trailing the 182,465 built in the overtime-packed previous week by 4.77 percent, but 61.74 percent ahead of the year-ago week's 107,447.

Breakdown for the week by company was: General Motors, 58.53 percent; Ford Motor Co., 21.46 percent; Chrysler Corp., 13.87 percent; American Motors, 3.31 percent; Volkswagen of America, 1.75 percent, and Honda, 1.08 percent.

So far this year, 6,467,601 cars have been completed, thus leading the year-ago output of 4,889,372 by 32.28 percent.

Fourteen auto assembly facilities worked overtime last week.

GM slated two shifts Saturday (Dec. 10) overtime at Flint (B-D and G lines), Lansing (B-D and G lines), Leeds (Mo.), Linden (N. J.), Lordstown (O.) and Oklahoma City.

Chrysler's five car points put in extra daily hours last week. Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 worked two daily 9-hour shifts, while Jefferson (Detroit) put in two 8½-hour daily shifts and St. Louis No. 2 operated one 10-hour daily shift. Chrysler plans to follow the same overtime schedule this week.

Ford's Chicago and Wayne (Mich.) plants operated two Saturday shifts. This week, Ford plans two shifts of Saturday (Dec. 17) overtime at Wayne.

Volkswagen's Westmoreland (Pa.) point also operated Saturday.

GM scraps 600 rusty LUVs that nobody wants

TAMPA, Fla. — General Motors last week scrapped 600 rusty Chevrolet LUV pickup trucks that have been sitting on the dock here for more than a year because dealers wouldn't buy them.

The '82 models all have diesel engines. The LUVs were built for GM by Isuzu of Japan and valued at about $5 million. Heavy rains have caused rust problems.

Also, demand for the LUV evaporated after GM introduced the small Chevrolet S-10 and GMC S-15 pickups.

GM decided it was cheaper to scrap the LUVs than to fix them. The risks of future lawsuits and potential bad publicity were also a factor.

Truck production for November is highest since '78

November truck output reached 243,558, making it the best month of truck production in nearly 4½ years, since 292,897 units were assembled in June, 1979.

Last month's total was the highest for November since 1978, when 339,721 trucks were finished. Last November, 126,935 units were completed.

The truck makers scheduled 48,497 units last week, 2.89 percent behind the previous week's 49,937, but 33.15 percent ahead of the year-ago 36,424.

Year-to-date, the truck manufacturers have produced 2,260,087 units, leading the 1,818,238 completed at this time last year by 24.31 percent.

Saturday (Dec. 10) overtime was slated at three plants last week. General Motors' Lordstown (O.) point worked two shifts, while the Pontiac No. 2 facility put in one shift. Ford Motor Co.'s Lorain (O.) plant also worked one shift Saturday.

Chrysler Corp. has scheduled its Warren (Mich.) point to operate two 9-hour shifts four days and two 8-hour shifts the fifth day this week.

Mandatory seat-belt bill put on shelf in Michigan

LANSING, Mich. — A mandatory seat-belt bill, due for a vote last week in the Michigan Legislature, was returned to the Insurance Committee.

Apparently no action will be taken until 1984.

Backers of the bill blamed legislative paranoia for the action. Two state senators were recalled in recent weeks over a tax issue and the belt law is considered by lawmakers to be a "recallable issue."

In another matter, a law keeping the state-set interest rating on car loans at 16.5 percent was signed by Gov. James J. Blanchard.

Without the law, maximum auto rates would have dropped to 12.83 percent at banks, dealers and finance companies; 15 percent at credit unions, and 14.55 percent at savings and loan companies.

The ceiling was kept at 16.5 percent because officials feared lenders would refuse to make new loans at the lower rates.

Canada assembles 15,741 trucks, best week in 4½ years

Canadian truck makers produced more vehicles in November than in any other month in 2½ years and did not let up on that rapid production pace as they assembled more units last week than in any week in 4½ years.

The manufacturers assembled 58,231 units in November, the most built in one month since 70,932 were completed in June, 1981. The total was the best for any November since 1977 when 63,549 trucks were built.

Truck output for last week was targeted at 15,741, making it the best week of truck production in Canada since the week ended June 23, 1979, when 15,923 units were finished. Last week's output was 1.29 percent above the previous week's 15,542 and more than 2½ times the 5,610 built in the year-ago week.

Year-to-date, there have been 525,827 trucks produced, leading the year-ago output of 458,368 by 14.72 percent.

The car manufacturers assembled 94,129 units in November—the top sum for that month since 103,872 cars were completed in 1978. Last month's tally was the highest for any month since last June, when 100,357 units were finished.

The makers estimated last week's production at 23,851 cars, up 1.28 percent from the 23,550 built in the prior week and 83.04 percent ahead of the 13,031 built in the 1982 week.

So far this year, 923,291 cars have been completed, up 16.39 percent from the 793,340 assembled in the year-ago period.

Chrysler Corp. estimated that 2,736 T-115 minivans were built last week at its Windsor facility. Of that total, 1,368 were Dodge Caravans and 1,368 were Plymouth Voyagers.

Proposed CAFE changes not all Detroit hoped for

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — An industrywide CAFE adjustment factor of 0.2 MPG for 1980 and later model-year fuel economy standards is being proposed by EPA.

Such a change would take into account effects of past changes in test procedures used to measure both compliance for emissions and for gas mileage.

But since changes benefitted auto makers even more in at least one instance than it penalized them, EPA also is proposing that future CAFE be adjusted downward by an unknown factor to compensate for some cost-saving flexibility EPA also provided. This particularly affects domestic makers who chose to test at higher mileage and would apply to 1986 and later model years.

The same factor is suggested for gas-guzzler tax for 1981 and later models.

EPA's proposal comes at a particularly appropriate time. With the nation awash with cheap gasoline and no sign of any coming shortage, sales of big cars are booming.

While General Motors and Ford Motor Co. are believed to have enough credits under the three-year-carryforward provision to meet the 1983 standard of 26 MPG, problems arise with 1984 and later models.

The rough scenario there is that GM may have problems amounting to hundreds of millions of dollars. Ford is expected to use—for the first time—both the three-year carryforward and the three-year carryback.

Normally, this might mean trying to convince NHTSA that it would restrain sales of big cars or make some other decision not in the best interest of shareholders, but Ford is believed to have made major technological strides in improving gas mileage.

While Ford is more hopeful than GM, both companies face uncertainties in future years. Unlike the light-truck standards, which are set administratively according to maximum feasible levels, the 1985 model CAFE is in statutory concrete.

How much flexibility NHTSA has is unsure and in an election year — or any year, for that matter — some lawmakers will be reluctant to take the pressure off the domestic companies.

The fear is that they would fall into old patterns just as they are beginning to become competitive with the Japanese small cars. Besides, the Middle East is still sufficiently unsettled that some lawmakers will not assume that the oil supply is stable.

So far, the Reagan Admini-

A Christmas Fantasy

Or, Season's grittings from Detroit

'Twas the night before Christmas and all through the land
The recovery rolled on like a new mini-van.
New-car sales were climbing with nary a pause,
And they almost kept pace with new state lemon laws.
Japanese showed restraint, thereby saving the day;
They just sold bigger cars—inscrutable, eh?

To boost U.S. sales, GM had a plan—
Sell better small cars that are made in Japan.
And build better cars here? GM never says can't,
Provided Toyota is running the plant.
The union said writing a contract that's fair
Should be just as easy as falling out of a chair.

One employe sued Ford, 'cause he got on the sauce
Then another sued 'cause they did not make him boss.
Diesel owners and Spaulding showed up, too, in court
As suing GM became a national sport.
Iacocca saved Chrysler and paid all its bills,
Now he's trying to cure Lady Liberty's ills.

Many Irish lost jobs, that DeLorean couldn't avoid;
But he was able to keep many book writers employed.
And Bricklin is back in the auto sales game,
Peddling Fiats by any other name.
Steed's been confirmed, DOT's on the Dole
And the court says that air bags may still play a role.

Santa finally arrived, looking fit, in the clover
In a sleigh he'd just purchased for 49 over.
He's a jolly old elf, when he chuckles he shakes;
In his teeth a pipe locked tight as an X-car's brakes.
He jumped to his sleigh, the deer heeded their skipper
And they took to the skies quick as a Zoe Zipper.
But we heard him exclaim as he flew to and fro:
"Merry Christmas, Detroit—See you at Expo!"

—Richard A. Wright

Pony roundup

Korean-built cars land in Canada

The first 600-unit shipment of Korean-built Hyundai Pony automobiles to be sold in Canada arrived at Vancouver, B.C., last week. Hyundai Auto Canada, Inc., will sell the four-door rear-drive hatchbacks through a 50-dealer network, beginning Jan. 1. Base price is $5,795. Another 900-car shipment is expected later this month. Hyundai uses Canadian windshield glass and tires.

Stockpile still riddled with shortages

Import inventory steady at 29 days

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars edged upward a bit during November, but so did the sales pace and the industry opened December with a 29-day supply, same as a month earlier.

A buildup in stockpiles by European makers offset a decline in the inventory of Japanese cars and allowed the European lines to boost sales, while Japanese sales were hampered by lack of cars.

There were 224,290 new imported cars in inventory Dec. 1, up from 217,965 a month earlier. A year ago, there were 374,775 new imported cars in stock, a more solid 51-day supply.

The supply of new imported pickup trucks increased during November to 81,322 units Dec. 1, compared with 70,778 a month earlier. However, the bigger Dec. 1 total was a 55-day supply, down from 58 days on Nov. 1.

The combined imported car and truck inventory Dec. 1 totaled 305,612 units, a 33-day supply, compared with 288,743 units a month earlier, also a 33-day supply.

Japanese lines were unable to build stocks during the month, even though the overall sales rate slipped a bit, and most makes opened December with inventories that were as short or shorter than the month before.

The total inventory of Japanese-built imported cars was good for 24 days on Dec. 1, unchanged from Nov. 1.

Japanese makes and their Dec. 1 days-supply figures were: Toyota, 13; Nissan, 22; Honda, 22; Mazda, 27; Subaru, 31; Mitsubishi, 41, and Isuzu, 59. In addition, Chrysler Corp. had a 66-day supply of Mitsubishi-built cars, including Plymouth Vista, 47; Dodge Vista, 50; Dodge Colt, 64; Plymouth Colt, 67; Plymouth Conquest/Sapporo, 92, and Dodge Conquest/Challenger, 105.

West German-made cars in stock Dec. 1 totaled 51,750 units, a 49-day supply, compared with 41,063 a month earlier, a 52-day supply.

German nameplates and their Dec. 1 days-supply figures were: Porsche, 20; Mercedes-Benz, 28; Audi, 29; BMW, 62, and Volkswagen, 77. VWoA also had a 58-day supply of U.S.-built Rabbits.

Days-supply figures of other European lines included: Jaguar, 20; Saab, 32½; Peugeot, 40; Volvo, 51; Renault, 71, and Alfa Romeo, 114.

Days-supply figures for imported pickup trucks Dec. 1 were: Mazda, 31; Toyota, 50½; Nissan, 55; Mitsubishi, 55½; Chrysler Corp./Mitsubishi, 85, and Isuzu, 129½.

GM-Toyota vote slated for tomorrow

WASHINGTON.—An FTC vote on the General Motors-Toyota joint venture has been tentatively scheduled for Tuesday, Dec. 20, according to FTC sources. Chrysler and GM met separately with top FTC staffers two weeks ago. Ford and Toyota discussed the venture with the agency last week. A Chrysler official said his company hoped to meet with a new commissioner, Terry Calvani, and FTC Chairman James C. Miller sometime before the vote. Chrysler and Ford are opposed to the venture.

Rebuttal period to follow closing of FTC record

Used-car rule opened for comment

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — The Used-Car Rule was opened for public comment last week by the FTC, broadening a court order that asked for public testimony on the rule's "known defect" provisions.

The FTC's record will remain open until Jan. 16, 1984, the commission said, to be followed by a 20-day period of rebuttal.

Commissioner Michael Pertschuk dissented in the decision to open the rule on a broad basis. Both Pertschuk and Commissioner Patricia Bailey had earlier objected to renewed public comment on the rule, saying that they were unaware of any changed conditions of law or fact making a reexamination appropriate.

Commissioner Terry Calvani voted for the expanded review, but said he had not formed an opinion on the merits of the used-car proposal.

The used-car rule was reopened to public comment at the direction of a U.S. Court of Appeals as a result of a deal between the FTC and a plaintiff who had challenged the rule prior to congressional veto. The court has said it expects proceedings involved in the remand to be completed by June 14, 1984.

The court has retained jurisdiction over the rule except for purposes of the remand.

• In August, the FTC voted to put the Used-Car Rule into effect six months after the Court of Appeals enters its decision on the used-car challenge.

The Used-Car Rule was passed by the FTC in August, 1981, requiring dealers to disclose warranty terms and known defects on a sticker posted in the window of each used car offered for sale.

Congress vetoed the rule in May, 1982, but the Supreme Court ruled in July of this year that the legislative veto was unconstitutional.

The commission asked for comments on a number of questions including whether an industrywide rule was needed to protect consumers against known defects, or whether current laws provide adequate protection.

The commission asked, "Is the commission's authority to prosecute unfair or deceptive practices under Section 5 of the Federal Trade Act through case my case adjudications adequate to police the marketplace against dealers who engage in a pattern or practice of deceptive sales of cars with known defects?"

• Do the consumer benefits outweigh the costs of complying with the known defects disclosure provision, the FTC wanted to know.

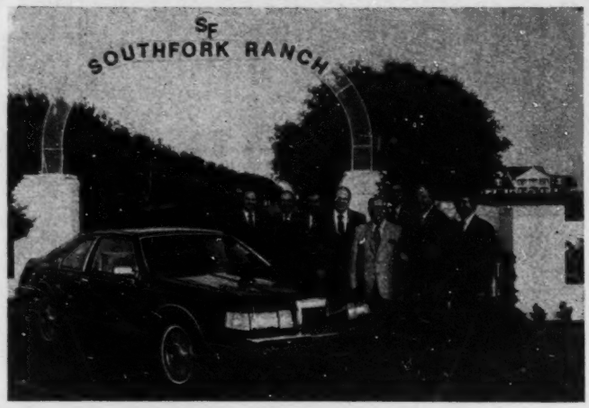
"How will dealers change their business practices in response to the provisions requiring disclosure of known defects?" the commission asked.

Pricing information was also requested regarding the effect of the known defects provision on used-car tradein allowances and the price of used cars sold by dealers.

And the FTC asked whether the dealer's obligations under the rule were understandable and if the "reasonable person" standard used in the rule was "sufficiently specific."

The same question was asked about the commission's definition of the term "defect." What specific revisions to the rule would make the rule easier for dealers to understand, the FTC asked.

The commission also wanted to know whether the window sticker format mandated for disclosure of known defects would provide information to consumers in a useful and understandable manner and what revision might make the information more useful to consumers.



L-M dealers play host at J.R.'s house

These Dallas Lincoln-Mercury dealers hosted a $36,000 party at Southfork Ranch to introduce the 1984 Continental Mark VII. Southfork is the home of the Ewing family on TV's "Dallas."

Nissan will try again for '81-'82 CO waiver

WASHINGTON. — Nissan's second request for an EPA waiver on carbon monoxide emissions will be reviewed by the EPA Jan. 9.

Nissan is again requesting that its 1981-82 Datsun 210 and 310 be exempted from compliance with the government's CO standard. A Nissan petition for waiver of its 210 and 310 models was first turned down by EPA on Nov. 8, 1979.

The EPA said that Nissan's request for a reconsideration of the original denial is based on testing by EPA and Nissan that shows the 1981 models emitting pollutants exceeding the government's carbon monoxide limits.

The Clean Air Act allows a CO waiver for a specific model year if the EPA administrator finds that protection of the public health does not require attainment of the government's CO standard of 3.4 grams per mile.

However, the waiver may be granted only if it is found "essential" to the public interest, if the applicant has made a "good faith" effort at compliance and if technology available at the time of production could not bring the model into compliance.

Written comments may be submitted on the Nissan petition until Jan. 13, 1984, the EPA said.

GM asks stockholders to help on restraints

DETROIT. — General Motors has told NHTSA that it is opposed to passive restraints in new cars, and now GM wants its stockholders to get into the act.

In a letter to shareholders, GM asked them to write their views to NHTSA before the close of the public comment period on Dec. 19. GM also asked that they send copies of their letters to the corporation.

The company also suggested that letters to U.S. senators and representatives would be a good idea.

The solicitation is not an inexpensive project. GM has a bit more than a million shareholders, and postage amounted to something over $200,000.

Add to that the cost of the letters themselves. The missives have a personal inside address and salutation. They are signed by Elmer W. Johnson, GM vice president, Public Affairs Staffs Group and general counsel.

The letters set forth GM's view that air bags or automatic belts should not be mandated because "they would not achieve the nation's safety objectives, yet would certainly add to the consumer cost of our products, resulting in a reduction in sales and employment."

GM restates its feeling that requiring use of the lap-shoulder belt systems already in cars is a better way to reduce highway deaths and injuries.

Also included in the mailing to stockholders was a position paper titled "GM Position on Passive Restraints."

Buick to hone performance image, Reuss says

By Marjorie Sorge
and Jim Plegue

FLINT. — Buick's goal is to "become the BMW of the U.S." and it is targeting its cars and engines toward achieving that goal, according to Lloyd E. Reuss, Buick general manager.

"Performance is very important to the Buick image," he said.

Not only will the new cars and engines be performance-oriented, but Buick's designs will differentiate it from its sister divisions.

According to Reuss, General Motors is trying to get more divisional competition going so design information is no longer shared. In plants where more than one division's cars are built, design information will be brought in through manufacturing operations, not engineering.

"The divisional discrimination in the past has basically been product," he said. "Our philosophy at Buick has been more than product. We sell a total ownership experience. That means you buy a product but you also buy a relationship with the dealer so you get more than just basic transportation."

At Buick, the image is performance and offering product differences that attract the non-traditional Buick buyer.

To attract those buyers, Buick has begun targeting products to specific markets and geographic areas. It also has high hopes for a two-seater and plans to introduce a strong performance N-car and to improve the turbo.

Several new offerings have been introduced, or will be in January, that are geared toward a specific market.

Reuss said Buick will introduce a Century T-type in January powered by the 3.8 liter fuel-injected turbo engine making it "the fastest intermediate front-wheel-drive."

In January, Buick will also introduce a version of the Skyhawk designed and built for the West Coast zones—Los Angeles, San Francisco and Portland. It is aimed at the young market and competes with the imports.

• "We practice more target marketing . . . than anyone else (at GM)," Reuss said.

Reuss gave other examples of Buick's target marketing: The Riviera convertible, an "image car" aimed at the affluent, upwardly mobile community; the Regal Somerset, a trim package on the rear-drive G-body, targeted at women buyers; the Olympia Century, an interior/exterior trim package which identifies Buick as an official sponsor of next year's summer Olympics in Los Angeles, and the Grand National Regal, a NASCAR-look-alike which does 0 to 60 in under 8 seconds.

In order to appeal to other non-traditional Buick buyers, Reuss said his division continues to work on a two-seater. Although Buick doesn't have corporate approval yet, Reuss is confident it is just a matter of time. He said Buick, GMAD and Fisher Body are working on it, the Buick sales organization can handle the product and there is a market with more

Continued on Page 20, Col. 1

Jim Plegue photos

Buick—turbo leader

Buick remains the world leader in turbo technology, according to Lloyd E. Reuss, Buick general manager. The 1984 Regal 3.8-liter V-6 with SFI is the most sophisticated in the world, he said.

Two-seater in wings

Although Buick doesn't have corporate approval for a two-seater yet, Reuss is confident it is only a matter of time. Buick would like to be the only division offering the car, he said.

New-car deliveries total 173,062

Ford paces sales gain of 21 pct. Dec. 1-10

By Jenny L. King
Staff Writer

Early-December new-car sales got the month off to a fast start with a healthy 21.03-percent increase over year-ago sales which themselves had been inflated by low-interest-rate incentives programs for customers.

Year-to-date sales climbed to 6,408,943, up 17.56 percent from 5,451,607 last year and within easy striking distance of 1980's total of 6,578,275. Both 1982 and 1981 totals were surpassed earlier this year.

Dec. 1-10 sales numbered 173,062, up 21.03 percent from 142,995. They were paced by Ford Motor Co. which enjoyed a 29.34-percent sales increase. The remaining car makers joined in the success except for Volkswagen where Rabbit sales were off 28.73 percent for the period.

Ford was up to 45,230 from 34,971 in 1982 and earned 26.14 percent of the domestic market, its best share since the late-June sales period. General Motors was up 19.36 percent, to 101,004 from 84,620. Chrysler Corp. was up 6.04 percent, to 19,408 from 18,303.

American Motors reported a sales estimate of 4,200, up 20.00 percent from 3,500. Volkswagen was down 28.73 percent, to 1,141 from 1,601, and Honda came through with sales of 2,079 for the period, nearly doubling the VW number.

GM sales accounted for 58.36 percent of the domestic market in early December compared with 59.17 percent in 1982. Ford earned 26.14 percent, up from 24.46 percent. Chrysler dropped to 11.21 percent from 12.80 percent. AMC dipped to 2.43 percent from 2.45 percent; VW backed down to 0.66 percent from 1.12 percent, and Honda took 1.20 percent of the current market.

Chrysler was the only Chrysler Corp. make to surpass its year-ago sales, with a 52.99-percent increase. Plymouth was down 8.04 percent and Dodge was off 8.00 percent. There were no Imperial sales.

At Ford Motor Co., Ford was up 28.71 percent, Mercury was up 42.62 percent and Lincoln was down 5.56 percent.

At GM, Oldsmobile was up 33.14 percent, Pontiac was up 28.39 percent, Cadillac was up 17.06 percent, Chevrolet was up 16.44 percent and Buick was up 2.98 percent.

AMC sales were off 40.00 percent, Renault/Alliance/Encore sales were up 60.00 percent and VW was off 28.73 percent.

Annualized sales reached 7.4 million units based on Dec. 1-10 actual sales.

Leaders of Florida dealers

New officers of the Florida Automobile Dealers Assn. are, from left: Dan Burns, Dan Burns Oldsmobile, Inc., Delray Beach, secretary-treasurer; Robert G. Keelean, Adcock Buick Co., St. Petersburg, president-elect; Franklin G. Griffin, Frank Griffin AMC-Jeep-Renault, Inc., and Frank Griffin Volkswagen-Peugeot, Inc., Jacksonville, president; J. W. Leonard, Buzz Leonard Motors, Inc. (Chrysler-Plymouth-AMC-Jeep-Renault-Mazda), Panama City, past president, and Dennis C. McNamara, McNamara Pontiac, Inc., Orlando, NADA director.

breaking news

Continued from Page 1

U. S. to get El Camino, Caballero from Mexico

DETROIT. — General Motors will produce Chevrolet El Camino and GMC Caballero in Ramos Arizpe, Saltillo, Mexico, for the U. S. market, beginning in the '85 model year. The little trucks now are made in Arlington, Tex. Production of Oldsmobile Cutlass Supreme at Arlington will be stepped up sharply when Supreme output is halted in the spring at Lansing to make way for the GM-20 car there. Most of the content in the Mexico-assembled trucks—about 90 percent—will be sourced in the U. S.

Volkswagen promotes Chrysler

DETROIT. — Robert T. Chrysler has been promoted to vice president of purchasing at Volkswagen of America, effective Jan. 1. Chrysler had been executive director of the department. He succeeds the late John E. Masterson.

GM wins emissions warranty case

WASHINGTON.—General Motors won an emissions warranty fight with the EPA last week in the U. S. Court of Appeals here. At stake was the agency's interpretive "useful life" rule that called for emission system integrity beyond five years or 50,000 miles of operation for vehicle classes. The case stemmed from a 1980 EPA order that GM recall all 1975 Cadillacs equipped with 230 carburetors. The order, which GM contested, came after four years of negotiation after which 40 percent of the vehicles had turned five years old or had been operated for 50,000 miles.

Big bucks being spent in war on rust

DETROIT. — Ford Motor Co. and National Steel Corp. probably will build electrolytic galvanizing lines at their steel plants here. Union officials at Ford said the company will spend $200 million on such corrosion-protection equipment. National said it is starting up a prototype galvanizing line at its Midwest Steel in Portage, Ind.

Toyota breaks ground in Canada

VANCOUVER, B. C. — Toyota Chairman Eiji Toyoda broke ground here last week for a $20-million aluminum-wheel plant to be operated by Canadian Autoparts Toyota, Inc. Production is expected to begin in 1985, with an ultimate target of 240,000 wheels a year to be shipped to Japan.

UAW chief sets agenda for next year's bargaining

Overtime, technology '84 issues

LAS VEGAS. — Excessive overtime and new technology will be major issues in the 1984 round of bargaining, according to UAW President Owen Bieber.

Bieber told the union's Skilled Trades Conference that the UAW is committed to ending overtime abuses in the 1984 negotiations. Those talks will basically be held with Ford Motor Co. and General Motors. The contracts expire on Sept. 14.

According to Bieber, the total number of overtime hours worked in the industry between February and July of this year would have provided work for an average of 55,000 people. He said it is "patently irresponsible" for management to press for so much overtime when so many are on layoff.

Ford currently has 30,400 on layoff while GM has 51,000.

However, Bieber admitted that many within the union's rank and file "want the overtime no matter the cost to their fellow workers." He said the union must educate those workers in the need to spread around the available work.

Eliminating a lot of overtime would not only increase the UAW-represented workforce but would also begin moving the union down the road to shorter work time. According to Bieber, that would allow more workers to "share in the high profits and high productivity of the auto industry."

The UAW recently supported a resolution from the International Metalworkers Federation which emphasizes reducing worktime without reducing compensation.

Bieber also warned that management must "act responsibly to ensure job security in order to maintain our more-than-35-year commitment not to resist the introduction of new technology."

In addition, Bieber sharply criticized the Reagan Administration. He said Reagan realizes that "if you keep people out of work long enough and keep the number of decent jobs few enough—some people will turn into strikebreakers and scabs in order to provide for their families."

He said almost 17 million Americans are unemployed or underemployed today.

"We may be in a recovery," he said, "but it's shaping up to be a workerless recovery. Or, if you prefer, a recovery with less for workers."

Local-content rule passed for '84 Mexican models

MEXICO CITY. — The Ministry of Commerce and Industrial Development, in making known complementary regulations to the Decree to Rationalize the Automotive Industry, said that 1984 cars must have from 50 to 70 percent nationally made parts.

The list of parts has been published in the official daily government newspaper.

The ministry said that national integration of the auto industry will make the sector self-sufficient with respect to accumulation and use of dollars.

The new regulation is aimed at standardization of nationally produced auto parts, with these substituting for their imported counterparts. This is expected to "fortify" the national auto parts industry, according to the ministry.

Regulations published require a gradual increase in the integration of national parts, with all cars expected to have at least 60 percent of major required units by 1987. Buses, tractors and trucks will be required to have from 80 to 90 percent of national parts.

Wilson honored

DETROIT. — Porterfield Wilson, president of Porterfield Wilson Pontiac-GMC, has been named a presidential adviser of Republic Airlines. He received a plaque from the airline.

Transportation Board sets annual meeting

WASHINGTON. — The Transportation Research Board will hold its 63rd annual meeting Jan. 16-20 at the Sheraton Washington and Shoreham Hotels.

Transportation Secretary Elizabeth Dole will speak at the chairman's luncheon Jan. 18.

68th Detroit Auto Show scheduled for Jan. 14-22

By Joseph Bohn
Marketing Editor

DETROIT. — The 68th Detroit Auto Show will be held Jan. 14-22, with more than 400 vehicles being displayed at Cobo Hall during a nine-day period.

Because of last year's unusually good weather which helped swell attendance to a record 454,000, Dan Hayes, general manager of the show, said he'd be happy if this year topped the number "by even 50 people."

To boost attendance, four more vehicles, or a total of 13, will be given away as part of "The Most Incredible Contest."

Subaru, Toyota, American Motors and Volkswagen dealer groups joined nine other domestic groups in contributing vehicles for the giveaways.

Another major new attraction is the 24 van conversions which are being displayed.

Displays could only be of conversions which are accessible to Detroit buyers, so a conversion had to be carried out by five area dealers to qualify for admittance, noted William R. Ritchie, show chairman and owner of Crest Lincoln-Mercury, Sterling Heights, Mich.

Theme of this year's show is "We're on a roll," signifying continuation of the industry's turnaround in '84, Ritchie added.

The Detroit Auto Dealers Assn. spent $600,000 to $700,000 on the show and hopes to recoup expenses as it did last year.

Hayes said DADA made a small profit on the '83 show through dealer charges for space.

About $104,000 will be spent on advertising, the same as in '83.

Ten radio stations will be doing live broadcasts from the show floor, Ritchie said, as part of the promotion and a panel of dealers will again field questions from visitors daily on different aspects of buying, service and the like.

'84 Cadillacs "Extended Body" Limos

☆ *Also '84 Lincoln Limos*

"AMERICAN CUSTOM COACHWORKS, LTD."

☆ **$32,500** ☆

When you want the very best value and quality, then you definitely must "talk to us before you buy elsewhere." Our prices start at only $32,500 and you can choose from cars in production or place your order to build a limousine to your specs or you may choose from an inventory of 30 limos of different sizes, models, prices, etc. Cars may be ordered with electric rear moon roof, chauffeur divider window, rear A/C, intercom, color TV and console, rear stereo/tape, electric bar, prem. tires, custom interior, heavy duty suspension, etc., etc.

10-month total tops 300,000 for first time since '79

RV shipments hit four-year high

Continued from Page 14

categories for both October and the 10-month period.

Through October, deliveries of all motor homes totaled approximately 58,800 units, an increase of 66.6 percent over the year-ago 35,300.

Ten-month shipments of Type A motor homes were up 71.2 percent, from 16,300 units in 1982 to 27,900. Van campers (Type B) totaled 4,600, a gain of 35.3 percent over last year's 3,400 units.

The Type B camper is a panel van to which the RV manufacturer adds any two of the following conveniences: Sleeping, kitchen and toilet facilities, 110-volt hookup, fresh-water storage, city-water hookup and a top extension to provide more headroom.

Deliveries of chopped vans—mini, low-profile and compact motor homes—were 68.6 percent higher than a year ago, 26,300 versus 15,600.

Multi-use vehicles shipped through October totaled approximately 129,900 units, an increase of 92.7 percent over last year's 40,100.

RVIA defines the multi-use vehicle as a completed van chassis modified by the RV manufacturer for transportation and recreational purposes. Changes may include windows, carpeting, paneling, seats, sofas and accessories.

Through October, shipments of all towable recreation vehicles totaled 118,500 units, an increase of 28.8 percent over the 92,000 delivered in the like period in 1982.

Travel trailers—conventional, fifth-wheel and park—were up 32.7 percent to 79,600 vehicles, compared with 57,400 a year ago. Folding camping trailers totaled 32,600, a gain of 10.1 percent over the year-earlier 29,600. Truck campers were 26 percent higher, from 5,000 units in 1982 to 6,300.

In October, total motor-home deliveries were 106.5 percent, from 3,100 a year ago to 6,400.

During the month, Type A motor-home shipments rose 88.2 percent to 3,200, compared with 1,700 a year ago. Chopped vans totaled 2,700 units, a gain of 107.7 percent over last year's 1,300.

Manufacturers delivered 500 van campers in October, an increase of 400 percent over the year-earlier 1,000 units.

Multi-use vehicles were 41.1 percent higher than last year, 12,700 versus 9,000.

Towable vehicles shipped during the month totaled 10,900 units, an increase of 26.7 percent over the year-earlier 8,600.

Retail outlets received 7,800 travel trailers in October, 41.8 percent more than the year-ago 5,500. Folding camping trailers were unchanged, with 2,700 being shipped. Truck-camper shipments totaled 400 both this year and last in October.

Year-to-date total up 20 pct. over 1982

Sharp gain reported in truck sales

Continued from Page 14

33,859 sales during the month, 10.1 percent higher than last year's 30,723. Through November, the count was 377,573, a gain of 33.8 percent over the year-ago 282,208.

During the month, 56,376 domestic compact trucks were retailed, up 14.7 percent over the year-earlier 79,866 units. The 11-month total was 33.1 percent higher, from 462,972 units in 1982 to 616,140.

November's domestic-compact sales included 756 Dodge Caravan T-wagons, 580 Plymouth Voyager wagons and two Dodge Mini Ram Vans. The T-wagons and van will go on sale officially in dealer showrooms Jan. 2.

In November, Ford widened its lead over Chevrolet. Its dealers sold 87,564 units, a gain of 30 percent over last year's 67,376. The 11-month total was up 23.4 percent to 895,580 units, compared with 725,800 a year ago.

Chevrolet dealers retailed 86,917 vehicles during the month, 11 percent higher than last year's 78,279. Through November, the count was 892,817, an increase of 19 percent over the year-earlier 750,169.

Dodge and Chrysler-Plymouth dealers sold 22,142 light trucks in November, a gain of 26 percent over last year's 17,574. The January-November total climbed to 244,976 units, up 8.2 percent over the year-earlier 226,140.

GMC reported that its dealers retailed 22,018 trucks during the month, 1.8 percent higher than last year's 21,629. Through November, the total was up 14 percent to 240,440 units, compared with 210,947 in 1982.

Sales of four-wheel-Jeep vehicles during the month totaled 10,412 units, an increase of 88.9 percent over the year-earlier 5,512. The 11-month count was 71,585, up 22.6 percent over the previous year's 58,369 units.

Volkswagen dealers retailed only 185 compact front-wheel-drive pickups during the month, compared with 996 a year ago. Through November, the total was 4,766, down 61.5 percent from last year's 12,072.

Increases were reported in November for all of the non-captive Japanese pickups except Nissan. The 11-month totals, however, were higher than last year for all five nameplates.

Toyota dealers retailed 12,306 vehicles during the month, a gain of 6.2 percent over the year-ago 11,125. The 11-month count was 153,028 units, up 16.6 percent over last year's 131,212.

In November, Nissan sales were down 21.9 percent to 10,770 units, compared with 13,789 a year ago. Through November, however, the total was 30.2 percent higher, from 97,267 units in 1982 to 126,661.

Mazda reported that its dealers sold 7,644 compact pickups during the month, an increase of 98.9 percent over the year-ago 3,844. The January-November total was up 82.4 percent to a record 67,072 units, compared with 36,772 last year.

November sales of Isuzu pickups totaled 2,065 units, an increase of 36.6 percent over last year's 1,523. Through November, the total was 22,637, up 39.2 percent over the year-earlier 16,263.

Mitsubishi, which introduced its compact pickups in the U. S. market at the start of the 1983 model year, reported 1,074 retail sales in November, up 143 percent from last year's 442. Through November, the total was 8,175, compared with 694 a year ago.

Buyers order them on almost 81 percent of new cars

Air conditioning is still a staple

By Joseph Bohn
Marketing Editor

Auto buyers have increasingly made air conditioning a staple item, demanding it in high numbers on all but the most entry level models.

The trend continued unabated in '83, as 80.97 percent of domestic cars came equipped with air, compared with 80.28 percent for the previous model year.

General Motors, as usual, led the industry. It generally sells the highest option content in cars.

It installed air in 90.65 percent of its models, up from 86.11 percent in '82.

Ford was next with a 77.87 percent installation rate, up from 74.17 percent in '82. Chrysler's rate was 61.36 percent, down from 69.84 percent. And American Motors' rate was 49.86 percent, down from 60.35 percent the previous year.

Generally, with higher percentages of bigger cars being sold and everyone going "upscale" in their marketing efforts, air conditioning is expected to continue making headway in industry sales.

The only cars running at or below 50 percent penetration are small base-level models, such as Omni/Horizon, Escort/Lynx and Chevette/Pontiac 1000.

Interestingly, Volkswagen is picking up ground with this profitable option, increasing its penetration to 52.20 percent from 46.20 percent in '82.

Chrysler aide heads Detroit productivity unit

DETROIT.—Robert W. Rawlings, director of productivity planning for Chrysler Corp., has been elected chairman of the newly formed Detroit Area Council of the American Productivity Management Assn.

This organization of companies in the U. S. and Canada is dedicated to improving productivity, quality and employe job satisfaction in the private and public sectors.

Local councils allow members to meet between national meetings to discuss topics of their choice, said Leon N. Skan, APMA executive director. The meetings are informal, and they provide members an opportunity to discuss local as well as national issues, Skan said. APMA councils are scheduled to be established within a year in Chicago, Minneapolis, New York, the New Jersey area and San Francisco.

Detroit-area membership includes General Motors, Chrysler Corp. and Ex-Cell-O Corp.

Started in 1975 as an informal information network by 10 companies interested in productivity improvement, APMA now consists of 180 major companies with more than $550 billion in sales. The association's membership also includes many public sector organizations, among them NASA and the City of New York.

New spurt predicted for '84

Turbos, fuel injection growing fast

By Joseph Bohn
Marketing Editor

Turbochargers and fuel injection are probably the two fastest-growing extra equipment items in the domestic industry.

Auto companies, for example, expect to install turbochargers in roughly 500,000 cars in '84—new lines, like Chrysler's Daytona and Laser, Ford's Mark VII and carryover lines like Cougar, EXP, Escort/Lynx, Pontiac's Sunbird et al.

In '83, turbochargers went on only 19,344 cars, or 0.03 percent of industry output.

Meanwhile, growing even faster is fuel injection—mostly, the throttle-body kind. Chrysler, for example, will put fuel injection on almost all its cars in '85 (except for entry level models, like Omni/Horizon).

General Motors and Ford have already moved ahead quickly, offering the carburetor-alternative on a number of '83 models which has been expanded even further in '84.

Industry observers predict that within a few years all but the lowest-priced lines will feature fuel injection.

Throttle body, the more expensive version, is still reserved for the high-priced lines, however.

In '83, 1,578,311 cars, or roughly 26.40 percent of industry output, carried fuel injection.

Cunningham adds leasing

Year-to-date auto output tops 6.6 million

Week's production slips to 167,495

By Mary Beth Mayer
Staff Writer

Last week the domestic auto makers scheduled 167,495 units, trailing the previous week's output of 172,807 by 3.08 percent, but 39.99 percent above the year-ago total of 119,652.

Downtime at two General Motors Camaro/Firebird plants accounted for the production decline. GM's Norwood (O.) and Van Nuys (Calif.) points were shut last week by a parts shortage that was reportedly due to poor quality electronics components which were received from non-GM suppliers.

So far this year, there have been 6,635,197 cars completed, up 32.56 percent from 5,005,484 finished at this time last year.

Breakdown for the week by company was: General Motors, 55.70 percent; Ford Motor Co., 22.18 percent; Chrysler Corp., 16.03 percent; American Motors, 3.43 percent; Volkswagen of America, 1.54 percent, and Honda, 1.12 percent.

Seventeen plants worked overtime schedules last week.

GM slated two shifts Saturday (Dec. 17) at Arlington (Tex.), Detroit, Doraville (Ga), Fairfax (Kans.), Flint (B-D and G lines), Janesville (Wis.) and Pontiac. The Lansing B-D line put in one shift of Saturday and Sunday (Dec. 18) overtime.

GM's Norwood and Van Nuys plants are scheduled to return to operation today (Dec. 19).

Ford facilities working daily overtime last week were: Atlanta, Chicago, St. Louis, Wayne (Mich.) and Wixom (Mich.). Wayne also operated two Saturday shifts.

Next week, Ford's Kansas City and Lorain points will be closed to avoid a parts shortage.

Chrysler's five car points put in extra daily hours last week. Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 worked two daily 9-hour shifts, while Jefferson (Detroit) operated two 8½-hour shifts. St. Louis No. 2 worked one daily 10-hour shift. All five plants operated Saturday.

This week Chrysler plans to follow the same overtime schedule as last week, except that on the fifth day, Belvidere, Newark, St. Louis No. 1 and Jefferson will operate two 8-hour shifts.

All U.S. car and truck plants will close for the Christmas-New Year holiday and most will be down from Monday, Dec. 26 through Monday, Jan. 2.

Production, sales plummet as Mexican crisis continues

MEXICO CITY. — The automobile industry will close the year with a 43-percent drop in production and in new-car sales, industry sources said.

Sales will be less than half of what they were two years ago.

Used-car sales dropped by 60 percent and it is estimated that more than 300,000 workers have lost their jobs in the automobile industry.

The Mexican Assn. of the Automobile Industry (AMIA) chaired by Cesar Flores Esquivel, and the National Assn. of Automobile Dealers (ANCA) headed by Alfredo Roiz, agreed that the industry is in its worst crisis of recent years.

They blamed the crisis on the general state of the economy and especially on the sharp drop in the population's purchasing power.

ANCA said that the collapse in used-car sales has led to the closing of scores of dealerships.

Felix Rojas Cruz, head of AMIA's computing department, said the drop in 1983 put production and sales at the level of 10 years ago.

In 1981, a record year, a total of 571,000 vehicles were sold, including automobiles, buses, truck-tractors and tractors.

In 1982, 409,000 units were sold and it is estimated that this year sales will shrink to 260,000 units.

General Motors N-car not a sub for A-specials

DETROIT.—The General Motors new N-car, or the GM-20, due out in 1985 will not replace the A-specials, the Oldsmobile Cutlass Supreme, Buick Regal and Pontiac Grand Prix as previously reported in AUTOMOTIVE NEWS. Instead, they will be entirely new additions to the Oldsmobile, Buick and Pontiac lineups.

The A-specials are scheduled to continue through the 1985, 1986 and 1987 model years. Sources say there is now no plan for a Cadillac version of the N-car in the immediate future.

Truck production remains above 59,000 for week

Domestic truck manufacturers last week produced an estimated 59,467 units, 130 more than were built the week before and 35.54 percent over the 38,333 built in the year-ago week.

Year-to-date, there have been 2,330,394 trucks assembled, up 25.54 percent from last year's 1,856,380.

Saturday (Dec. 17) overtime was worked at five General Motors plants. Janesville (Wis.), Pontiac No. 5 and St. Louis worked two shifts while Detroit and Pontiac No. 2 worked one shift.

Ford Motor Co.'s Kansas City, Lorain (O.), Louisville and Wayne (Mich.) points worked daily overtime last week.

Chrysler Corp.'s Warren truck facility put in two 9-hour shifts four days last week and operated two normal 8-hour shifts on the fifth day. Chrysler plans two 8-hour shifts there all five days next week.

Week's output steady in Canada for cars, trucks

Canadian car and truck production last week remained about even with the previous week.

The car manufacturers scheduled 22,591 units, 27 units ahead of the 22,564 assembled the week before and 1.13 percent more than the 22,339 units built in the year-ago week.

So far this year, the makers have assembled 944,595 units, leading the year-ago output of 815,996 by 15.76 percent.

Truck output for last week was targeted at 15,171, a decline of 11 units from the prior week, but 50.41 percent ahead of the year-ago week's 10,087.

Year-to-date, the truck manufacturers have completed 540,439 units, 15.16 percent ahead of the 469,310 built at this time in 1982.

As of last week, Chrysler Corp.'s Windsor facility had completed more than 14,000 T-115 minivans. A Chrysler spokesman said that the plant will add a second shift to its schedule beginning Jan. 16, 1984.

GM-Toyota deal ranks second in 31st annual poll

Story of the Year: Recovery for auto industry

By John K. Teahen Jr.
Managing Editor

It wasn't the best of years, but it sure was a lot better than the three that preceded it.

For the auto industry, 1983 has been a year of recovery after three years of recession/depression. And that recovery was voted the top event by the AUTOMOTIVE NEWS editorial staff in the 31st annual Story of the Year poll.

Second place went to the General Motors-Toyota agreement to build small cars together in California and in the third spot, just a point behind, was Chrysler Corp.'s payback of its $1.2 billion in federally guaranteed loans—seven years early.

Another agreement with the Japanese was the No. 4 story: Japan agreed to a fourth year of voluntary restraints on car exports to the U. S. The new quota, for the year beginning April 1, 1984, is 1.85 million cars, up from the former 1.68 million.

Only two points separated the next two stories, and both came out of Washington. In fifth place was the government's lawsuit alleging brake defects in 1.1 million 1980 GM X-cars. NHTSA wants a recall and $4 million in damages, claiming GM concealed information. GM has denied the charges.

No. 6 was the Supreme Court's overturning of NHTSA's attempt to rescind the passive restraint standard.

The auto recovery has been a year-long happening and has embraced the three most important areas — sales, production and manufacturer profits. New-car sales this year are expected to wind up at about 9.1 million, a nice gain of 14 percent over last year's dismal total of a bit less than 8 million.

But an improvement over 1982 is hardly worth talking about since last year was absolutely dreadful. The encouraging news is that 1982 sales were the highest since 1979 (10.6 million), which was a very good year indeed.

Even more encouraging is the fact that domestic auto sales for 1983 also were the best since 1979's 8.3 million. This year's domestic deliveries are estimated at 6,729,000, a rise of 17 percent over last year's 5,756,660.

This year's new-car sales exceeded the total of full-year 1982 in early November. They moved

Go-ahead for GM-Toyota reaches final FTC hurdle

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — At press-time last week, the FTC was preparing to vote provisional approval of the proposed General Motors-Toyota joint venture to built subcompact cars in GM's plant in Fremont, Calif., starting in the '85 model year.

The tentative approval was due despite the vociferous protests of Chrysler and the more muted opposition of Ford. Toyota will make the car using U. S. and Japanese parts and union labor. Chevrolet dealers will sell it.

But the tentative approval comes only after last-minute negotiations bringing somewhat reluctant approval by Toyota and GM of an accompanying consent agreement that puts into concrete the basic terms of the venture:

The limit of 200,000 units a year; the 12-year duration of the joint operation, and exchange of information between the two competitors limited to the absolute minimum.

Delay is the most important issue here because all consent agreements rest for 60 days for public comment and FTC retains the option of changing its mind although it does not seem likely to undo its provisional approval.

What it does mean is that Chrysler — and possibly Ford — apparently will not test the decision in court until FTC's approval becomes final. This could be as little as 61 days after publication of the consent decree in the Federal Register or as much as 90 days.

What was not clear at press-time was whether Toyota can move machinery into the Fremont plant before that. If not, it would mean a great rush to 1985 production. GM has been readying the adjacent stamping plant where there is no ban on preparation for starting work.

Chrysler, which reactivated its strong lobbying team it used to encourage lawmakers to approve federally guaranteed loans just a few years ago, has launched verbal missiles and even threatened to get itself a Japanese mistress.

Chrysler has wanted FTC to oppose the GM-Toyota joint venture, saying this will allow for a "public airing" so that "customers and competitors" will know what these two "giants are trying to obtain behind closed doors."

Actually, far more than in any normal antitrust investigation, the public has been well clued in. But more importantly, Chrysler's point is one for which there have been respectable antitrust legal opinions for years.

Says Chrysler: "The fundamental fact is that the proposed agreement eliminates competition, right in the heart of the critical entry-level market, between the two strongest auto companies in the world."

When Chrysler says the agreement is "illegal by anyone's measure of antitrust law including the Reagan Administration's," that "anyone" clearly does not include either GM or Toyota whose own antitrust experts believe the agreement was drawn to avoid violating the antitrust laws

Nor does it include the FTC staff and the majority of its Commissioners. Michael Pertschuk, now a Democratic minority commissioner but former chairman under the Carter Administration, agrees with Chrysler and Ford and said he will vote against the agreement. But there are enough votes without Pertschuk.

Although Chrysler said putting the agreement in consent order terms does not remove the "opportunity for collusion," FTC staff and some commissioners appear to want a consent order signed as additional protection against extending the agreement.

It can also be a way of mak-

Alfa joins the four-wheel-drive club

Alfa Romeo has joined with Pininfarina to produce a 4WD version of its smart 33. Alfa supplies some stampings and parts, but the car is assembled by Pininfarina. It will not be sold in the U. S. Story on Page 5.

Pontiacs and Buicks to come from Lansing

Oldsmobile to build GM-20 models

By Roger Rowand
Engineering Editor

LANSING. — "When Better Buicks Are Built, They'll Be Built in Lansing."

So goes a lighthearted slogan being heard around the Oldsmobile home plant in Lansing these days.

The division is getting ready to build the GM-20, once known as the N-car. And, for the first time, Olds will assemble a car for Pontiac and Buick as well as for its own dealer network.

The GM-20 is a front-drive car sized between the subcompact Firenza, which is the J-car, and the intermediate Cutlass Ciera, or A-car.

A fact sheet on the vehicle says it will be "aimed at a portion of the market growing at a rate almost three times greater than the over-all market. There will be a stylish coupe in 1985, four-door sedans in 1986. Uplevel trim and appointments will be available."

General Motors is spending some $250 million in converting and tooling up Oldsmobile and Fisher Body Lansing for the new program. Planning started in September, 1979, and the corporation OK'd plans in July, 1982.

That capital spending will result in an integrated production facility with capacity for 120 cars an hour — the highest of any assembly plant in North America.

"The target market for the car demands quality. We will achieve that quality through vehicle design for quality assem-

Toyo Kogyo changes name to Mazda Motor

LOS ANGELES.—Toyo Kogyo Co., Ltd., the manufacturer of Mazda cars and trucks, will become Mazda Motor Corp., effective May 1, 1984. The company's name change is subject to approval by stockholders at the annual meeting scheduled for Jan. 27. Approval is anticipated. The company was founded in 1920 and began producing vehicles in 1931.

Parts problems shut down new GM plant

DETROIT.—Production of C body cars at General Motors' brand-spanking new assembly plant in Orion Township, Mich., came to an abrupt halt Wednesday, Dec. 21. Resumption is slated for Jan. 3. Cars weren't being made, but

GM asks for a break on '84 CAFE shortfall

By Heler Kahn
Washington Bureau Chief

WASHINGTON. — General Motors is currently projecting that it will miss the CAFE standard for 1984 cars by 2.3 MPG, but it is hoping to avoid either civil penalties or restricting market choice by carrying credits forward and back.

The CAFE standard for 1984 cars is 27 MPG.

GM's proposals to NHTSA suggest counting the vehicles made at the plant in Fremont, Calif., under its proposed joint venture with Toyota and using a projected 0.3 CAFE eight-year adjustment factor from EPA changes in test procedures.

The first catch is that — at presstime—the Toyota joint venture was still not settled and the earliest possible models which could carry back credits would be '85s.

The second catch is that EPA is proposing a 0.2 MPG industrywide CAFE adjustment—not the 0.3 MPG requested by GM —and, in addition, it is suggesting applying a ceiling for testing under accumulated mileage —which could well have the effect of lowering the CAFE adjustment factor below 0.2 MPG.

GM, as a full-line maker is facing relatively less demand for its smaller, high-MPG cars and also "can experience a more dramatic shift" than makers with fewer lines. Its estimates are based on present market conditions and continuing low fuel prices.

• GM also told NHTSA that it expects to exceed the light-truck fuel-economy standard for '84 models. It projects 20.7 MPG for both its two-wheel-drive and four-wheel-drive light trucks. (The standards are 20.3 MPG for 4x2 and 18.5 for 4x4.)

GM's expected 24.7 MPG for cars — short of the '84 standard of 27.0 MPG — occurs because customers are buying bigger cars. GM notes all the many changes it has made to double its fuel economy from a fleet average of 12.0 MPG in 1974 to the estimated 24.7 for '84 models.

GM said this is despite its continued investments while others have delayed their programs from one to three years because of the recession and shifting customer demand. GM said it can make more diesels and fuel-efficient gasoline-engine cars than customers are buying.

GM won't know its actual '84 MPG until the end of the model year production, but it hopes to use its leftover credits from the '81 and '82 model years, its current product plan (most of which is confidential) and the three-year carryback provision in the law.

Whether GM "will be able to minimize disruptive alternative programs in the coming years," GM said, depends upon the FTC and the EPA decisions.

If these do not coincide with GM assumptions, then "GM may be forced to choose between risking large civil penalties or failing to provide customers with the types of cars they demand."

• The latter, GM added, is "socially and economically irresponsible because of its potential devastating effect on employment and its minimal potential for improving energy supplies."

While some customers — diverted from big cars — might buy smaller ones, others might postpone buying or choose foreign cars, GM said.

Even counting those that might shift to smaller cars, GM said, the effect could be to forego production of 856,000 1984 GM vehicles and a loss of some 194,000 jobs in GM and supplier plants.

Another third of that number of jobs could occur in transporting cars to dealerships and in sales to customers, GM said, and those effects would ripple thr... the economy.

GM wants to count the Toyota-built cars coming from the Fremont plant presumably because they will carry the Chev-

New ways to hedge auto bets: Futures and sub-index options

By Kathleen Hamilton
Financial Editor

In a sense, the auto makers have it easy during worldwide auto slumps: They can lay off employes, continue to ship cars to dealers, stop paying dividends and delay payments to suppliers, thus shifting much of the burden of hard times away from themselves.

There is no such formula for suppliers. Some have diversified into defense or electronics, but such investments are expensive, long-term and hold no guarantee that their earnings and losses will swing counter to those in the auto industry.

Investors with stock portfolios heavy in autos have more of an opportunity to protect themselves from cyclical swings by diversifying their holdings. But again, the counterbalances are rather imperfect.

And neither supplier nor investor can easily protect himself from the unexpected swings in the auto market like those that baffled virtually every prognosticator during the most recent downturn.

But if commodities and stock exchanges get their ways, two new avenues of hedging one's auto bets may soon open up: Auto futures contracts and sub-index options based in part on auto stock performances.

• The first to file an application with the government for trading was the 102-year-old Coffee, Sugar & Cocoa Exchange, Inc., in New York. It wants to begin trading auto futures contracts in much the same way that Treasury bills, pork bellies and the Fortune 500 index of stocks are being traded today.

If approved by the Commodity Futures Trading Commission (CFTC)), the Coffee Exchange could begin trading as early as autumn, 1984.

The application, filed in June, is now hung up at the staff level of the CFTC and the public comment period is probably months away, according to Jean Webb, CFTC deputy secretary.

The CFTC staff has run into "major" problems with the application and is awaiting answers from the Coffee, Sugar & Cocoa Exchange, she said.

But Todd Petzel, chief economist for the exchange and designer of the contract, seemed undaunted by that news. Problems raised so far by the CFTC have been in definitions, not over the substantive question of whether auto futures contracts should be traded, Petzel said.

On that question, the CFTC has given the Coffee Exchange indications it does not object to the concept, he said.

Because of the novelty of auto futures, he expects the review process to take the full year allowable, although it could take longer if the CFTC raises "material" objections, he said.

• By the time trading begins, the Coffee Exchange will have invested millions of dollars and devoted more than two years to research.

It may take six months to two years, but the exchange expects to see volume of at least 10,000 trades a day, Petzel said.

Indeed, high volumes and lots of speculators are necessary to keep any futures market liquid and trading properly. Without speculators to take positions opposite those of the big, conservative bettors (i.e., suppliers) who are just trying to avoid risk rather than make big profits, a futures market won't work.

And that's part of the reason auto futures were chosen, Petzel said. Ten-day sales reports get widespread news coverage, auto suppliers number in the hundreds of thousands, auto jobs in the millions and investors millions more. All are potential futures traders.

But these are the same people the New York Stock Exchange will be hoping to lure with the basic industries sub-index options for which it is seeking Securities & Exchange Commission approval. More on that later. But like futures markets, options markets require high volumes of trading to be successful.

• There are other potential problems with auto futures.

In agricultural commodities trading, for example, the Department of Agriculture floods futures traders with information on rainfall, crop prices, inventories—in short, virtually every kind of information to make an intelligent decision. And the information is free.

The Commerce Department tracks the auto industry, but not nearly in such depth. Auto news is covered in the business press, but some traders question whether daily newspapers carry enough information for futures traders.

Production statistics — a big component of sales — are available only from the trade press with regularity.

Critics point to another potential snag: Sales numbers are often manipulated. Dealers can hold off reporting sales if they think an incentive program is coming. Zones, districts and even factories have been known to inflate a 10-day report or two. A single order from Hertz can inflate a month's sales total.

Some companies have even

Continued on Page 34, Col. 1

Today, cocoa beans; tomorrow, a corner on cars?

The Coffee, Sugar & Cocoa Exchange has petitioned the government to allow trading of futures contracts based on auto sales. If approved, by fall of 1984, suppliers could be hedging their guesses on the auto market in much the same way coffee merchants have been doing on the exchange floor in New York since 1882.

L-M plans new Topaz, two turbo Lincolns

By Joseph Bohn
Marketing Editor

Lincoln-Mercury's Mark VII and Continental turbodiesels and a new sport version of the Topaz will help to fuel the division's spring marketing drive.

Turbo versions of the Mark VII and Continental go into production Jan. 23. Availability is expected to build by early March. The cars have been delayed about a month from the original timetable, but have steadily received attention in ads.

They are expected to account for about 10 percent of volume in the Mark VII and Continental lines — originally slated for 45,000 and 18,000, respectively.

Currently, the division is developing a direct-mail piece on turbodiesel versions of both Continental and Mark VII which will be launched in February to prospects who expressed interest in diesels from previous direct-mail programs, said John Vanderzee, Lincoln-Mercury ad manager.

Vanderzee said a separate campaign is expected later, with merchandising materials for dealers as well, but full plans have not been finalized.

Similarly, ads are being prepared for the sport version of Topaz, which goes into production in mid-February.

Lincoln-Mercury will have new advertising on Cougar, Topaz, Continental and Grand Marquis for print and TV, being readied for spring.

Vanderzee described it as a "freshing" rather than a major change in strategy.

Major ad support will continue behind Cougar, Topaz and Mark VII — "the lead cars" — in the first quarter of 1983.

Generally, the division is holding to its media strategy of predominantly TV and magazine.

Young & Rubicam is the agency.

Hino to begin truck output in U.S. in Jan.

JACKSONVILLE, Fla. — Assembly of Japanese Hino medium trucks will begin here in mid-January after more than a month of "dry runs," and about 500 of the mid-range diesel units are expected to be produced during the year.

Hino American Distributors, Inc., a new subsidiary of Lisa Enterprises, Inc., Deerfield, Fla., will operate the plant and market the trucks. Lisa is also the parent firm of Southeast Toyota Distributors, Inc.

The trucks will be marketed initially in the Southeast, and a dozen dealers already have been signed. Eventually, Hino American plans to distribute the vehicles throughout the U. S.

Top officials of Hino Motors, Ltd., Japan's biggest big-truck manufacturer and a part of the Toyota Group, will attend ceremonies marking the opening of the Jacksonville operation.

Also on hand will be the dealers, representatives of supplier firms and government and community leaders.

Hino American will complete the assembly of the knocked-down Japanese trucks which will be shipped to Jacksonville.

• There will be three Classes 6 and 7 model straight trucks with gross-vehicle weight ratings from 25,500 pounds to 32,000 pounds.

Hino in-line six-cylinder diesels rated at 160, 180 and 200 HP will power the vehicles, with a six-speed manual the only transmission available at this time. An Allison automatic is

McDonald to speak at '84 ATD convention

WASHINGTON.—F. James McDonald, General Motors president, will be the keynote speaker at the 21st annual convention and exposition of NADA's American Truck Dealers Division April 7-10 in Phoenix.

McDonald will be the principal speaker at the formal opening of the convention—TRX-'84—Saturday, April 7, in the Phoenix Civic Plaza.

Utilimaster's '84 walk-in van

Utilimaster Corp., Wakarusa, Ind., manufacturer of commercial vehicles and van conversions, has introduced an expanded line of walk-in vans for 1984. The firm now offers two different types of body construction for the varied needs of commercial customers. The vans feature a new adjustable three-way sliding door which is removable from the pocket.

No one truck fits all, major operator warns

CLEVELAND. — There is a clear trend in the freight-transportation business toward segmentation, specialization and consolidation of the industry into fewer, more diversified companies, according to Charles R. Marcoux, president, Leaseway Transportation Corp.

But while carriers are segmenting the market and striving to offer specialized services to freight shippers, he noted, truck manufacturers appear to be pressing hard for standardization, fewer options and a one-truck-fits-all attitude.

In doing so, said Marcoux, "suppliers are responding to a trucking industry that doesn't exist anymore.

"Thanks to deregulation and the recession, trucking companies have totally changed the way they regard their business," he added. "Everything from our marketing efforts and personnel policies to our view of long-range planning has been revamped. And we have most definitely taken a hard look at our vehicle requirements."

Marcoux spoke at the 1983 SAE truck and bus meeting/exposition as part of the blue ribbon panel focusing on the issue, "Commercial Vehicle Technology — Dimensions for Tomorrow."

He acknowledged that Leaseway Transportation has not been an easy company to sell to in the past because it was so diversified and decentralized. The company is working to centralize its purchasing function, he said, but if anything, the company is becoming more specialized, more diversified.

Moreover, he observed, other motor carriers which once offered a single type of service, and therefore had uncomplicated equipment requirements, also are becoming more diversified.

"While Leaseway may have been the exception among vehicle users in the past, the Leaseway model is fast becoming the rule in trucking," he said. "The 'pure plays' are disappearing; the complicated companies are coming."

Marcoux chided the equipment manufacturers for a my-

Automatic cover for truck beds

Cover Pools, Inc., Salt Lake City, has developed a Save-T Cover for pickup truck beds. The heavy-duty automatic cover, which works much like a horizontal window blind, is pulled out to protect the truck bed and contents, sliding on tracks less than a half-inch in diameter which are recessed below the sides of the truck bed.

Flxible moves to acquire Perfection-Cobey

HARRISBURG, Pa. — Harsco Corp. and Flxible Corp., a wholly owned subsidiary of General Automotive Corp., signed a letter of intent for Harsco to sell the assets of its Perfection-Cobey Co. Division, Galion, O., to Flxible.

The closing date is targeted for Jan. 31, 1984, with consummation of the sale subject to execution of a definitive agreement and approval of directors of both companies.

Perfection-Cobey produces truck bodies, including special service and all-steel body platforms, and hydraulic hoisting mechanisms. Flxible manufactures and markets advanced design transit buses and provides technical service, maintenance support and spare parts distribution to the transportation industry.

Harsco, which has 16 divisions, markets 22 varied classes of products and services, and its operations fall into four major industry segments: Primary metals, fabricated metals, construction and defense.

Mark J. Obert, Flxible president, said Perfection-Cobey will strengthen Flxible by providing

truck industry news

In October, first 10 months

Truck registrations show dramatic gains

Registrations of new trucks of all types in the U. S. were significantly higher than a year ago in October and the 10-month period.

During the month, according to R. L. Polk & Co. statistics, 264,509 units were registered, an increase of 36.9 percent over the year-ago 193,243. There were gains in all three market segments.

Through October, 2,391,481 new trucks were registered, 21.4 percent higher than last year's 1,969,158 units. The 10-month count was up in two of the three market segments.

Light-truck registrations in October showed a gain of 37.3 percent over a year ago, 247,409 versus 180,140, with big increases in all three weight classifications.

The Group 1 total was 139,937 units up 30.7 percent over the year-ago 107,091. There were 104.911 Group 2 tallies, 46.7 percent higher than last year's 71,505. Group 3 was up 65.9 percent, from 1,544 units in 1982 to 2,561.

Medium-truck tallies during the month totaled 4,885 units, an increase of 25.5 percent over the year-earlier 3,891.

• There were 27 Group 4 tallies in October, and none a year ago. The Group 5 total was 168, a gain of 171 percent over last year's 62. Group 6 was up 22.5 percent to 4,690 units, compared with 3,829 in 1982.

Heavy-truck tallies, losers in eight of the first 10 months of 1983, were dramatically higher in October, with strong gains in both weight classifications.

During the month, 12,215 vehicles were registered, an increase of 32.6 percent over last

Table on Page 30.

year's 9,212. Group 7 was up 31.9 percent, from 3,412 units in 1982 to 4,501. There were 7,714 Group 8 tallies, 33 percent higher than a year-earlier 5,800.

Through October, there were

Continued on Page 30, Col. 1

HD registrations in October up for second month

For the second consecutive month, the number of new heavy trucks registered in the U. S. in October topped those for the same month a year ago.

R. L. Polk & Co. reported that 12,215 Groups 7 and 8 trucks were tallied during the month, an increase of 32.6 percent over last year's 9,212 units. The October total also was the second highest of 1983, exceeded only by the 13,204 heavies registered in September.

The count in October was higher than a year ago for both heavy-truck groups.

There were 7,714 Group 8

Specialist predicts quality will be taken for granted

CAMBRIDGE, Mass. — U.S. auto makers are imposing more rigid quality requirements on themselves and their suppliers, according to Harry W. Mathews Jr., an automobile industry specialist at Arthur D. Little, Inc.

Arthur D. Little is a multinational management and technology consulting firm.

Mathews predicts that by the 1990s, the wide gaps in quality will be reduced to the point where top quality on all cars will be taken for granted.

The reason, Mathews said, is that automotive manufacturers with lower standards of quality and reliability long since will have suffered catastrophic losses in sales and market share, some to the point of going out of business.

"What the public wants today is quality and reliability," said Mathews. "To get that they'll ignore brand name, product loyalty, even past relationships with trusted dealers."

He added that manufacturers are getting the message and are spending huge hums to meet the competition.

Mathews said that the trend toward higher quality is, in part, the product of a more knowledgeable consumer.

"Consumers have more access to information about automobiles than they had in the past," he said. "Data gathered by government and independent agencies receives wide publicity in the media, making it possible for buyers to assess new models throughout their development."

Mathews pointed out that some states have enacted lemon laws concerning repeated failures in new automobiles and said, "manufacturers who fail to recognize and respond to heightened consumer awareness and these new laws simply will not be around in the 1990s."

Planning A Big Sale?

LET THE DEALERS KNOW THROUGH AN AD IN THIS SECTION!

Employers, insurance firms could collaborate on plan

Study says incentives boost belt use

By A. S. Plotkin
Staff Correspondent

CAMBRIDGE, Mass. — More people might be induced to use seat belts if major employers collaborated with insurance companies in programs to produce potential extra insurance benefits or premium reductions for belt wearers, according to a study by two economists at DOT's Transportation Systems Center here.

The report said employers are "in a unique position to influence" drivers to buckle up.

It concluded that the idea has potential "because individuals usually respond to financial incentives, and because insurance companies could substantially reduce their motor-vehicle-related loss payments if safety belt usage could be increased."

The study was sponsored by NHTSA's Office of Driver and Pedestrian Research. It assessed the feasibility of incentives which could be offered by auto, life, health and workers' compensation insurers and indicated that the two latter types show the most promise.

Estimates of annual potential loss claims savings per case to insurers include $200 in workers' compensation and $32 to $54 on a comprehensive family health insurance premium. Potential per case savings were $12 to $50 in auto insurance and about $4 in life insurance.

The authors of the report, Philip S. Coonley and Carol Gurvitz, cautioned that it is unlikely that any insurance company will offer "substantial upfront incentives, such as premium discounts, for those who claim to be belt wearers."

Although reductions in premiums for using seat belts would be desirable both in terms of attracting customers and increasing seat belt usage, Coonley and Gurvitz said, "there are serious problems associated with trusting the insured's commitment to wear belts and denying claims settlements to those insureds who are injured while not wearing belts."

But before sizeable joint efforts of major insurers and employers are undertaken, they advised, considerable new belt-related data should be gathered, such as:

1. The distribution of motor-vehicle injury and mortality costs among the various type of insurers.

2. Loss claims data of belt wearers and non-belt wearers by demographic characteristics.

3. Employer costs of motor-vehicle injuries and fatalities both at work and off-the-job, and the ability of safety belt programs to reduce these costs.

4. Mortality data for belt wearers as opposed to non-belt wearers.

All this belt-related data should be collected, the report said, in cooperation with insurers and employers "and should be widely disseminated so employers will better appreciate the substantial potential economic benefits of safe driving and belt usage."

Recommended also were evaluation of existing insurance incentives relating to safety belts and child restraint systems for their effectiveness in increasing restraint usage, attracting belt-wearing customers and reducing loss claims.

In particular, evaluation of these specific programs was urged:

1. The recent offer of Nationwide Mutual Insurance Co., Columbus, O., of additional death benefits, medical payments and family compensation to belt wearers.

2. The incentive program of Blue Cross-Blue Shield of Oregon, called "Wellness," for its own employes, involving accumulation of "points" for certain good health practices, including a commitment to wear auto safety belts.

3. The official policy of Vermont of denying workers' compensation benefits to state employes who are killed or injured without safety belts while driving on the job.

4. Selection of a health insurance program involving child restraint, parental safety belt education and safety belt "loaner" and giveaway" programs.

The report observed that the insurance industry has a very large stake in cutting the costs of motor vehicle accident-related injuries and deaths. Even on the basis of incomplete data, the authors estimated, $12.8 billion was paid out by private insurers for motor-vehicle injuries in 1980.

Federal data shows that belt wearers have about one-quarter the incidence of fatal or serious auto injuries as do unbelted occupants.

Coonley and Gurvitz did not think much help for their proposal might be found among the ranks of the various state insurance commissions, "whose mandate is to oversee the financial viability, marketing behavior and claims settlement process of insurance firms."

"They generally are more concerned about the potential of incentives to confuse consumers than about their potential to change driver behavior," the authors said.

Although cuts in premiums for usage of belts would be desirable both for attracting customers and for increasing belt use, the auto insurance industry's reluctance "to offer upfront premium reductions seems reasonable in light of problems associated with either completely trusting the insured's commitment to wear safety belts or in denying a portion of coverage to those insureds who are injured while not wearing a safety belt."

The report noted the "inconsistency between attitudes toward safety and belts and belt-usage behavior" among U.S. drivers. Surveys show that the overwhelming majority of the drivers believe that belt usage enhances safety, but current actual usage is only about 11 percent.

Because most people do not think they will be killed or badly injured on an average trip, "it is perhaps not surprising that most people find belt use to be unworthy of the time, and possible discomfort involved."

"Incentives represent a way to develop an immediate or near-term payoff for safety belt usage," the study said. "The public has positive attitudes toward safety belts and recognizes that they can contribute to injury reduction.

"To be effective," the report continued, "safety belt promotions must focus on motivating people to actually use safety belts. Incentive schemes must try to make the perceived payoff more immediate and to balance the equation between behavior and reward."

Some employer incentive programs aimed at getting employes to wear belts while off the job have achieved considerable success, the report noted.

The "rewards" included discount coupons donated by fast-food chains and percentage coupons for more valuable prizes. In some cases, the value of prizes "has been a function of the group belt-use rate." Rewards were applied repeatedly, usually daily, for a period of time, followed by a period of intermittent reinforcement.

The plans for implementing the programs were developed by employes, and drew considerable publicity, with contest winners getting recognition.

Safety center publishes guide to bumper protection

WASHINGTON. — A guide to bumper protection on almost every 1984 car to be sold in the U.S. has been published by the Center for Auto Safety.

The center ranked Ford Motor Co. as the "best domestic" with all but one of its 1984 models, the Escort Turbo, having 5-MPH bumper protection.

Honda and Volvo were rated as the "worst," as they were the only ones which went to 2.5-MPH bumpers on all of their 1983 and 1984 models. Mercedes-Benz was termed "the luxury loser" with 2.5-MPH bumpers on its cars. Chrysler Corp. and General Motors had the weaker bumpers on most models, but kept 5-MPH bumpers on some cars.

The center gathered the information for its 1984 Car Book, which is to be released in January. The group is currently in court seeking a return to the 5-MPH bumper standard which NHTSA reduced to 2.5-MPH in 1982.

Chrysler for Bakersfield

Derrill Van Wyk, seated, signs a contract with Chrysler Corp. for a Chrysler-Plymouth franchise in Bakersfield, Calif. A veteran Volkswagen and Mazda dealer, Van Wyk will operate as Van Wyk's of Bakersfield, Inc. Van Wyk's father, Arthur, center, operated a Dodge dealership in Inglewood, Calif., in the 1960s. Looking on are Bruce Hultman, Chrysler's Los Angeles zone dealer operations specialist, and Jan Thompson, dealer placement manager for the Los Angeles zone.

Calspan, New York State U. organize research center

ALBANY. — The Research Foundation of State University of New York, the University's Center at Buffalo (UB) and Calspan Corp., of Buffalo, have formed a nonprofit, research corporation to contribute to the state's industrial and economic development and to increase university-industry cooperation.

The corporation is known as the Calspan-UB Research Center, Inc.

It will have access to a combined technical and scientific pool of more than 3,000 personnel, including scientists and engineers as well as Ph.D. and M.S. candidates in scientific and technological disciplines.

It is a joint venture of the Research Foundation, headquartered in Albany, which represents the University Center at Buffalo, and Calspan, a private research and development group and a subsidiary of Arvin Industries, Columbus, Ind.

The Research Center, which will be housed in Calspan's laboratories in Buffalo, will seek research grants and contracts for projects that require the combined technical strength of both SUNY and Calspan organizations.

In addition, new product concepts developed at the center will first be considered for development and manufacture in Western New York.

The founders said the new corporation will conduct independent non-classified research to benefit the educational, industrial, technological and economic development of Western New York and New York State.

It will seek support from federal, state and local governmental agencies as well as foundations and private companies, they added.

Dr. Jerome B. Komisar, president of the Research Foundation, said the new venture "broadens the base and range of scientific and technical personnel and equipment available to both the university and Calspan by providing a structure for the conduct of joint research activity."

Among the fields in which research awards are expected are aerospace, chemical, mechanical, electrical and computer engineering.

Dr. Steven B. Sample, president of the State University of New York at Buffalo, has been elected chairman of the board of trustees of Calspan-UB Research Center.

Dr. Charles E. Treanor is director of the research center, and Dr. George Lee is associate director. Treanor is Calspan commercial and industrial vice president, program director and chief scientist. Lee is dean of engineering and applied sciences at the University of Buffalo.

Presidential decree opposed

Labor, management team up in Mexico

MEXICO CITY. — Management and labor have joined forces in a determined bid to obtain a reversal of some of the most drastic aspects of the presidential decree to rationalize Mexico's automotive industry.

Francisco Valenzuela, president of the Automotive Industry Coordinating Council, said that assembly plants and unions united to obtain major concessions "because our interests are the same."

There has been growing antagonism toward the Decree to Rationalize the Auto Industry.

The industry is miffed because it was not consulted prior to the publication of the decree in the Official Diary, and unions and managements are in accord that strict enforcement can further increase present problems.

Valenzuela said that if the decree is not "substantially amended," it can result in the dismissal of more than 40,000 workers and some assembly plants may decide to abandon operations.

Valenzuela said that management and labor particularly do not agree with a governmental decision to reserve production of buses to a State-run assembly plant.

This could lead to the loss of jobs for 15,000 workers, and Valenzuela said a joint committee representing labor and management is demanding that private assembly plants be permitted to continue making buses.

Valenzuela said that it is "virtually certain" that the government will make concessions in areas that are hurting and threatening one of the most productive sectors in Mexico. Talks have been initiated, not directly with the president, but with his aides.

The goal of labor and management is to reach an accord beneficial to all, and especially to reduce the threat of further unemployment. Valenzuela said that unemployment in the sector has now affected 44,200 workers.

If the government (and the president) will be "more rational" in their approach, then Valenzuela is of the opinion that a turnabout can occur and that auto sales will not plunge even lower than they have this year.

Valenzuela also was confident that coming wage negotiations will not cause any problem because management is aware that workers have seen a sharp erosion of their purchasing power, and labor is also agreeable to "belt tightening" for a limited time until conditions improve.

Valenzuela said there will be general agreement on the question of wages and no strike.

In the show of force, labor and management hope to achieve a relaxing of controversial sections of the decree before the government releases the second section early in January, 1984.

Car sales rise in Canada for ninth consecutive month

Sales in Canada of North American-built passenger cars continued their upward swing in November with their ninth consecutive monthly gain. Truck sales were ahead of 1982 by a wider margin and completed their fifth straight month of improved totals.

New-car sales were up 40.04 percent, to 57,813 from 41,021 last year. Sales for the 11 months of 1983 totaled 587,431, up 27.74 percent from 459,857.

Truck sales, including captive imports, were up 59.00 percent in November, climbing to 17,972 from 11,303 in 1982. Year-to-date sales were up 16.61 percent, to 173,262 from 148,582.

Truck sales have been up in seven of this year's 11 months.

General Motors new-car sales were up 42.22 percent for the month, rising to 31,362 from 22,051 a year ago. Ford sales of 11,869 were up 62.08 percent from 22,051. Chysler was nudged into third place in November with sales of 11,299, close behind Ford's 11,869. Chrysler was up 31.29 percent, from 8,606 last year.

American Motors was up 6.15 percent, to 2,605 from 2,454, including 706 imported Renaults this year versus 722 a year earlier. Volvo reported sales of 678 new passenger cars, up 15.50 percent from 587.

GM earned 54.25 percent of the November car market, up from 53.76 percent. Ford was up to 20.53 percent from 17.85 percent. Chrysler's share dipped to 19.54 percent from 20.98 percent. AMC claimed 4.51 percent, down from 5.98 percent, and Volvo's share dropped to 1.17 percent from 1.43 percent.

GM's truck sales were up 57.02 percent for November, to 8,958 from 5,705 in 1982. Ford was up 65.96 percent, to 6,187 from 3,728. Chrysler's sales of 2,367 were up 43.02 percent from 1,655, and AMC Jeep sales more than doubled to 460 from 215.

GM earned 49.83 percent of the November truck market, down from 50.48 percent. Ford claimed 34.43 percent, up from 32.98 percent. Chrysler was off slightly, dropping to 13.17 percent from 14.64 percent, and AMC was up to 2.56 percent from 1.90 percent.

Hino's U.S. plant rolls next month

Continued from Page 14

scheduled to be introduced later.

Some parts for the trucks, such as fuel tanks, batteries and tires, will be sourced in the U. S.

The Hino models will be the first Japanese big trucks to be assembled in the U. S. General Motors is importing built-up Isuzu mediums from Japan for distribution in the U. S. as Chevrolet Tiltmaster and GMC Forward.

A third Japanese manufacturer of big trucks, Nissan Diesel Motor Co., Ltd., Tokyo, is expected to open headquarters in Dallas in 1984. The firm plans to begin establishment of a dealer network for trucks in Classes 4 through 7.

Cosworth's Duckworth

Keith Duckworth, left, of Cosworth, and an assistant discuss a test about to be conducted on a Cosworth engine mounted on a dynamometer.

Ford, Cosworth to develop new Grand Prix engine

DETROIT. — Ford Motor Co. said its advanced technology and research organizations are joining Cosworth Engineering, Ltd., of Northampton, England, in a new development program designed to produce a "year 2000" Grand Prix engine and certain associated power units.

"We have a number of mutually interesting ideas and we are particularly delighted to continue an association with Keith Duckworth, of Cosworth, which has existed for the past 25 years," said Ford Chairman Philip Caldwell.

The best-known consequences of the Ford-Cosworth relationship have been the DFV and DFY engines. This 3.0-liter V-8 design won its first race in June, 1967. It has won 155 Grand Prix races, 12 Formula World Driving Championships and 10 constructors' championships.

Michael Kranefuss, director of motor sports for Ford, said, "We expect the new Ford engine to make its debut in 1986, but this is by no means a one-engine program. We expect it to provide important long-term consumer benefits in the areas of fuel economy, engine durability and efficiency."

HD registrations in October up for second month

Continued from Page 14

registrations during the month, a gain of 33 percent over the year-earlier 5,800 units. The Group 7 total was up 31.9 percent to 4,501 units, compared with 3,412 a year ago.

Through October, 103,795 Groups 7 and 8 trucks were registered, off 3 percent from last year's 107,041 units.

The 10-month total of Group 8 tallies, however, was 4.3 percent higher than last year, 63,085 versus 60,511. The Group 7 count was down 12.5 percent to 40,710 units, compared with 46,530 a year ago.

In October, International increased its lead over No. 2 Ford by almost 500 units. Its 10-month total was 24,932 tallies, compared with 21,681 for Ford.

Bayer adds AMC deal

NORWALK, Conn.—Stephen Bayer, president of Bayer Cadillac-Oldsmobile, Inc., has opened Bayer AMC/Jeep/Renault in South Norwalk.

No one truck fits all needs, major operator warns

Continued from Page 14

opic view of the trucking industry that only focuses on over-the-road linehaul trucking.

He noted that Leaseway has long sought — in vain — a more productive local delivery vehicle as a way to keep costs down in that segment of the company's business.

"Here is a huge, $66 million segment of the transportation market with a lot of problems, and no one is working on it," he said. As a consequence, he added, Leaseway reluctantly decided to design and build its own high-productivity local delivery truck.

Leaseway is not the only vehicle user that has felt compelled to design its own vehicles because of lack of responsiveness from the manufacturers, he said.

To avoid further drifting in this direction, manufacturers and users need to cooperate much more than they have in the past, he said, and this raises new issues, but they can be resolved.

"For many years, especially the last few, negotiations between carriers and shippers have been on a 'win-lose' basis," said Marcoux.

"We are now beginning to move toward 'win-win' negotiations in which we work together so that we both gain. We must apply the same philosophy to our supplier relationships. At Leaseway Transportation, we intend to do just that, and we want you to join us."

Leaseway Transportation provides highway transportation, vehicle leasing, and other distribution services throughout the U. S. and Canada and Puerto Rico.

The Cleveland company owns more than 78,000 trucks, tractors, trailers and cars.

Truck registrations show dramatic gains

Continued from Page 14

2,247,991 light-truck registrations, an increase of 23.2 percent over last year's 1,824,812.

The 10-month Group 1 count was up 23.5 percent, from 1,031,261 units in 1982 to 1,272,313. Group 2 was 23.3 percent higher, 958,154 versus 777,257. The Group 3 total was 16,524, up 1.4 percent from the year-earlier 16,294.

Medium-truck tallies through October totaled 39,695 units, an increase of 6.4 percent over last year's 37,305.

There were 277 Group 4 tallies, compared with only seven a year ago. Group 5 was off 50.7 percent, from 1,247 units in 1982 to 615. The Group 6 count was 7.6 higher, 38,803 versus 36,051.

• Heavy-truck registrations for the 10 months were down 3 percent from a year ago, 103,795 versus 107,041.

The Group 7 total was 40,710 units, a decline of 12.5 percent from last year's 46,530. But the Group 8 count was 4.3 percent higher, 63,085 versus 60,511.

Ford strengthened its grip on first place in October, boosting its 10-month lead over Chevrolet to more than 33,000 units.

Through October, Ford had 756,737 registrations good for 31.64 percent of the industry total. Its share was up 1.48 percentage points from last year, when it was No. 2 with 593,900 tallies.

Chevrolet accounted for 30.26 percent of the industry total through October with 723,581 registrations. Its share was down 0.81 points from a year ago, when it accounted for 31.07 percent with 611,862 tallies.

Ford, Freightliner, Peterbilt, Volvo and the miscellaneous group were the only gainers in market share over a year ago.

Flxible moves to acquire firm

Continued from Page 14

access to specialty truck equipment and parts markets, permit Flxible to manufacture bus components currently vendor sourced, and expand Flxible's machining and fabrication capabilities.

Also, he said, General Automotive's international marketing capabilities and truck-industry experience will strengthen the Perfection-Cobey position in specialty truck-equipment markets worldwide.

$1.6-million Firestone suit settled out of court in Texas

HOUSTON. — Firestone has settled out of court for $1.625 million with the family of a young South Texas man who suffered brain damage from an exploding rim.

Rene Rodriguez was 14 in September, 1975, when he tried to add air to a tire on his father's hay truck at the family farm near Victoria, Tex.

The multipiece rim on the wheel separated explosively, the ring flying out and striking Rodriguez in the head. A lawsuit charged he suffered subsequent epileptic fits from the injury, as well as permanent loss of intelligence and memory.

The peculiarity of the RH5° multipiece design makes it particularly dangerous to bystanders in the case of an explosive separation, said John C. Risjord, of the Kansas City law firm of Risjord & Curtis. Risjord represented Rodriguez in the product liability case, which was brought before the U. S. District Court for the Southern District of Texas.

"In an RH5° rim, the ring faces outboard of the rear duals," Risjord said. "In an ordinary standard dual setup, the rings face each other. With an RH5° rim, if the ring comes off during servicing, it has much more of a chance of striking a bystander."

The Rodriguez case is the fifth product liability case since August involving multi-piece wheel rims that has culminated in a substantial award or settlement for the plaintiff. Involving rims made by Firestone, Goodyear and Budd Co., the five cases together have cost multipiece rim manufacturers more than $16 million in payments to the plaintiffs.

Predicasts teams up with E.R.C. Statistics

CLEVELAND. — Predicasts, Inc., has become the exclusive representative in the U. S. and Canada for industry reports published by E.R.C. Statistics, International, Ltd., London.

E.R.C. publishes consumer-oriented product research, including information on the auto industry. Predicasts, a business information and research firm here, also reports on the auto industry, but from a manufacturing standpoint.

Ward named head of Rolls-Royce's U.S. subsidiary

LYNDHURST, N. J. — Peter Ward has been appointed president of Rolls-Royce Motors, Inc., the U. S. subsidiary of the British car manufacturer.

Ward, who has been managing director of the newly formed Rolls-Royce Motors Sales and Marketing Division since February, with worldwide responsibilities in these areas, will continue to hold that position and will be based at the company's headquarters in England.

Two other executives were appointed to senior positions in the U. S.

John Grillo, formerly vice president-finance and administration, steps up to executive vice president. He has been with Rolls-Royce for 25 years and has been responsible for the finance department and general administration of the company. He will be in charge of day-to-day operations of the firm.

Robert Schwartz will take a new post as vice president, sales and marketing.

Schwartz resigned last February as vice president of North American sales for American Motors and as president of American Motors Sales Corp.

Makers build 6,794,336 cars, highest since 1979

Auto production up 36 pct. for '83

By Mary Beth Mayer
Staff Writer

Estimates of this year's auto output make 1983 the best year of U.S. production since 1979.

This year, the auto makers scheduled 6,794,336 units, 36.61 percent ahead of the year-ago total of 4,973,870, and the highest total since 8,418,369 units were assembled four years ago.

The December total is estimated at 572,527, a 49.13 percent jump from 383,921 completed in the year-ago month. It is the top sum for the month since 637,336 cars were completed in 1978.

For the final three months of 1983, the manufacturers are estimating 1,912,994 units, up a whopping 58.94 percent from the 1,203,660 built in the same period in 1982.

It is the highest quarterly output since the second three months of 1981 when 2,032,219 cars were completed, and the best showing for the last quarter since 2,415,441 units were assembled in 1978.

Last week's planned output was 158,774, down 5.42 percent from 167,860 built the prior week.

No Saturday (Dec. 24) overtime was worked last week, as all U.S. auto makers except Honda were closed for the Christmas holiday. The week's estimate leads the holiday-shortened year-ago week's total of 94,242 by 40.65 percent.

Breakdown for the week by company was: General Motors, 59.32 percent; Ford Motor Co., 19.76 percent, Chrysler Corp., 14.74 percent; American Motors, 3.56 percent; Volkswagen of America, 1.62 percent, and Honda, one percent.

A parts shortage closed Ford's Kansas City Tempo-Topaz plant last week.

GM, Ford, American Motors and Volkswagen closed for the Christmas/New Year holidays after working Friday (Dec. 23) and will return to operation Jan. 3.

Chrysler's five car points put in extra daily hours last week. Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 worked two daily 9-hour shifts the first four days of the week and two 8-hour shifts the fifth day. Jefferson (Detroit) operated two 8½-hour daily shifts and St. Louis No. 2 put in one daily 10-hour shift all five days.

Honda's holiday vacation schedule finds the plant down Dec. 23, Dec. 26 and Jan. 2. On Dec. 30, eight hours of production are scheduled, as opposed to the usual 16.

Ciera ragtop to be prize at St. Louis auto show

ST. LOUIS. — A new 1984 Oldsmobile Cutlass Ciera convertible will be given away by the Bi-State Oldsmobile Dealers at the Greater St. Louis International Auto Show, Jan. 25-29.

Registration to win the car starts Jan. 4, at the showrooms of any of 25 Bi-State Oldsmobile dealers. Registrations will also be available at the Oldsmobile exhibit area at Cervantes Convention Center when the show opens.

Year's car output in Canada rebounds to five-year high

Canadian auto and truck makers have had strong showings during the 1983 calendar year.

According to their estimates, the auto manufacturers enjoyed their best calendar year of production in five years, and the truck makers ended the year 18.31 percent ahead of the 1982 total.

The car makers completed an estimated 967,328 during 1983, up 20.67 percent from last year's 801,685 and the best showing since 1978, when 1,131,050 units were built.

Truck production this year is slated at 554,064 units, up from 468,327 assembled in 1982.

The car manufacturers have estimated December output at 77,310 units, the best total for that month since 85,377 cars were completed in December, 1978. The total is up 54.35 percent from the year-ago month's 50,088.

Total truck output for the month is slated at 50,196 units, making it the best December since 1978 when 52,191 units were built. The month's estimate is 85.62 percent ahead of the 27,043 built in the comparable month last year.

For the final three months of 1983, the car makers are estimating 244,364 units, up 51.94 percent from 160,836 built in the same period in 1982. It is the best fourth quarter showing since 1978 when 292,183 units were assembled.

The truck makers are targeting fourth-quarter output at 163,299 units, a 70.74 percent increase from last year's 95,794, and the highest total for the period since 183,746 trucks were built in 1978.

Last week, the car makers slated 22,232 units, down 3.73 percent from the prior week's 23,092, but more than double last year's 10,602.

The truck manufacturers targeted 13,708 units for last week, down 9.15 percent from 15,088 the previous week, but more than double the 5,177 units built in the comparable 1982 period.

All car and truck facilities closed for the holidays after working Friday (Dec. 23) and will resume production Jan. 3.

1983 truck output reaches 2,387,403, best since 1979

Domestic truck manufacturers' calendar-year production estimates make 1983 the best year of output in four years.

This year, the makers have assembled 2,387,403 trucks, 25.51 percent ahead of the 1,902,164 built last year, and the highest total for the year since the makers finished 2,973,498 units in 1979.

The estimate for December is 195,793, leading the year-ago month's output of 128,948 by 51.84 percent, and representing the best showing for the month since 1978, when 276,248 units were assembled.

For the last three months of the year, the makers are estimating production of 680,814 units, up 71.36 percent from 397,305 units finished in the year-ago quarter. This is the best quarter of truck production since the second quarter of 1979 when 887,948 units were built, and the top sum for the fourth quarter since 1978 when 980,442 units were assembled.

Last week, the truck makers slated 57,471 units, trailing the previous week's 59,005 by 2.60 percent, but 74.07 percent ahead of the 33,017 built in the comparable 1982 week.

All domestic truck makers except Nissan and International Harvester closed for the Christmas/New Year holidays after working Friday (Dec. 23) and will return to operation Jan. 3.

Nissan and IH closed after the last shift Thursday (Dec. 22).

Ford, Renault race to wire in Europe for sales honors

By Richard Feast
European Editor

LONDON.—There was a photo finish in the race for European market leadership in 1983. The final results have not yet been tabulated.

Ford of Europe, well ahead of the bunch for the first time by the halfway stage, took a late and strong challenge from Renault — market leader for the previous three years.

At the end of November, unofficial estimates put little more than 10,000 units—out of a total of some 9.75 million — between them, with Ford a nose ahead.

But the key to the winner's circle lies in December sales in France, where Renault is market leader and Ford is the leading importer. The market shares are such that the money is now going on Renault. To the end of October, the French company had 34.8 percent and Ford had 7.0 percent in France.

None of the other leading Europeans — Fiat Auto, Volkswagen and Peugeot groups and General Motors — could catch either of them in 1983.

By tradition, December registrations in France are strong — almost 10 percent of the 1982 total, for instance.

By contrast, in the UK, Ford's single most important European market, December is usually a weak month. The previous December accounted for little more than 4 percent of 1982's total. And the UK market, while it has seen record levels of selling in 1983, was expected to fall back considerably in December.

Thus Renault could get the title by a surge of French selling and a slowdown in selling in the UK, where its presence is small.

• Ford believes that in the 11 months of 1983, it had 12.6 percent and Renault had 12.5 percent. Renault has a similar picture: 12.5 percent for Ford and 12.4 percent for itself.

The reason for the slight disagreement stems from the slow reporting process in some European countries. There are no definitive European registrations statistics, merely national reports from the 16 or so countries. And the manufacturers cannot always agree on which countries should be included.

The major markets, such as West Germany, France, Italy and the UK, and the smaller markets like Holland, Belgium, Switzerland and so on are obvious. The disagreements center

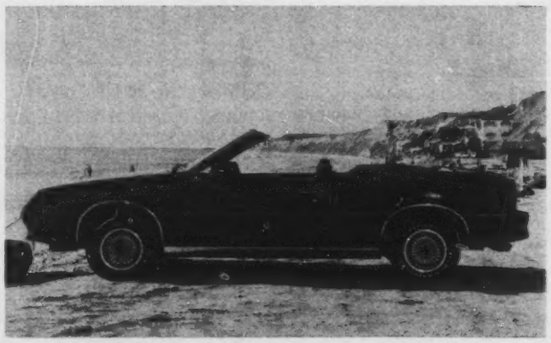
Dropping the tops



J-Cars for the sun

American Custom Coachworks, Ltd., is producing convertible versions of the Buick Skyhawk, Pontiac 2000 Sunbird and Chevrolet Cavalier for General Motors dealers. The Beverly Hills (Calif.) company plans to convert thousands of these cars. Deliveries will begin in January.

Dealers cautious, but think sales recovery is real

By Richard A. Wright
Assistant Managing Editor

While record cold has gripped the country from the northern plains states down into Texas and even Florida, the auto industry's long winter of discontent seems to be over.

Dealers in Minnesota, Wisconsin and Illinois were optimistic that 1984 will be a good year and many, despite temperatures of 20, 30 and even 40 below zero and wind chills that would make Siberia shudder, reported that sales are unusually brisk for this time of year.

In the south, where the recent cold wave did not push the mercury quite so low but was perhaps more of a shock, sales were cooled but not enthusiasm for the long-term outlook.

Many dealers said they think 1984 will be a good year. A few expect it to be a record sales year for them, but most foresee a continuation of the current gradual upturn.

• A few dealers tied the new-car sales upturn to a general recovery, but, interestingly, most did not. Several pointed out that unemployment may be high, but so is employment.

"More people are working than at any time in our nation's history," said one General Motors dealer, "but sales are nowhere near record levels. That tells me that it is dissatisfaction with the cars that is holding back sales, not an inability to buy."

Jim Mancuso, Chicago Chevrolet dealer who noted that next year he will complete a half century of selling cars, said he foresees a better year in 1984, but not a year of spectacular sales growth.

A year ago Mancuso predicted that 1983 would be a year of gradual increase in sales and he sees 1984 as more of the same — but starting from a higher level, of course.

Mancuso did not see a general recovery as the impetus to increased sales — "today's headlines say U. S. Steel is shutting a plant here and that kind of thing is scary." He cited the age of the fleet now on the road.

"Cars are aging, they are an average of 7½ years old now," he said. "People are getting to the point where they have to do something about it. They can't keep their old cars going."

Mancuso said his service shop is jammed with cars that would not start during the current cold snap. "If you are going to keep an older car, it has to be well maintained or it is not going to start when it gets cold like this. Many people are just not in the habit of maintaining their cars properly."

• Several dealers agreed that the age of cars on the road is a major factor in the stronger sales picture.

"It started Monday," said Bruce Johnson, of Peterson Motors, Lake City, Minn., where the temperature dipped down to obscenely low sub-zero levels. "In a period when there is usually no action, people are buying cars — and they want them right away."

Johnson said he is very optimistic about the year ahead and said his dealership is taking a lot of older cars in trade. Apparently the severe cold was the

A gain of at least 16 pct. for 1984, Lund says

GM expects 4.6 million car sales

DETROIT. — General Motors expects to sell at least 6.1 million cars and trucks in the U. S. in 1984, according to figures supplied last week by Robert D. Lund, sales and marketing vice president.

The breakout would be at least 4,640,000 cars and at least 1,450,000 trucks.

The totals would compare with 1983 sales of "more than 4 million cars and nearly 1.25 million trucks," which were 16 percent over 1982 and the best combined sales year for GM since 1979.

"More importantly," Lund said, "sales from October through December were 20 percent ahead of 1982, insuring us a fast start on the new year."

He added, "We have forecast an improvement of almost 16 percent in industry sales in 1984, and GM expects its sales to increase at an even faster pace than the industry's."

Even the conservative 16 percent prediction would boost GM's 1984 sales to 4,640,000 cars and 1,450,000 trucks.

Lund said 1983 has been "a great recovery year — especially for GM." Improved sales have brought increases in production and by next spring, the number of GM employes in the U. S. called back from indefinite layoff will reach 90,000, he said.

Reviewing 1983 sales, Lund pointed to major gains for the J-cars, the A-cars and the full-size models. The J and A lines are GM's newest front-wheel-drive families.

He said the J-cars closed 1983 with about 480,000 sales, a 79 percent increase over 1982. Sales of those cars have topped 900,000 since the first ones appeared in May, 1981.

The J-cars are Chevrolet Cavalier, Pontiac 2000 Sunbird, Oldsmobile Firenza, Buick Skyhawk and Cadillac Cimarron. Firenza and Skyhawk were introduced early in 1982.

Lund said Cavalier was the industry's third best selling nameplate in 1983.

• Sales of the mid-sized A-cars — Chevrolet Celebrity, Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century — totaled about 612,000 in 1983, up 65 percent over 1982. Nearly one million of them have been sold since they were introduced in January, 1982.

In the standard-size field, Lund said Chevrolet Impala and Caprice, Pontiac Parisienne, Oldsmobile 88 and Buick LeSabre accounted for nearly 650,000 sales in 1983, a gain of 30 percent over 1982.

Oldsmobile 98, Buick Electra and Cadillac DeVille in the luxury class combined for 380,000 sales, up 26 percent over 1982.

"We're selling all of these cars we can build," Lund said of the full-size and luxury models.

The compact Chevrolet S-10 and GMC S-15 pickups had sales of 220,000 for the year, which topped 1982. The S-10 Blazer and S-15 Jimmy, new for the '83 model year, totaled 135,000 sales.

Lund said Chevrolet and GMC van sales were almost 200,000 for the year, up 40 percent over 1982, and sales of Chevrolet and GMC Suburbans were nearly 50,000, a gain of 30 percent.

Lund said that broad-based improvements in the economy during 1983 have brought unemployment and inflation rates down at the same time and have caused consumers to be much more confident about the future. But he stressed that the recovery in car and truck demand has not been limited to the individual consumer.

"Business demand is very strong and growing," he said. "Sales of medium and heavy-duty trucks have been improving steadily for the past six months.

"Currently, sold orders for medium and heavy-duty trucks are running considerably above the levels seen for the last three years. This is a very significant sign, not only for our business, but for the economy in general."

To retrain laid-off workers

Up-front tuition help offered by GM-UAW

DETROIT. — General Motors and the UAW last week announced a $9.2 million tuition assistance plan for laid-off GM-UAW workers.

UAW Vice President Donald F. Ephlin, director of the union's General Motors department, and Alfred S. Warren Jr., GM industrial relations vice president, said as many as 70,000 indefinitely laid-off GM workers who retain recall or rehire rights will be eligible to participate in the program that began Jan. 1.

"What is new about this plan," said Warren and Ephlin, "is that all qualified laid-off workers will be able to receive assistance in the form of up-front payment to an accredited college, university or certified vocational school.

"This is in recognition of the fact that laid-off employes are less likely to have 'up-front' money for tuition," they added.

The newly negotiated "GM-UAW National Tuition Assistance Plan for Laid-Off Workers" is a variation of GM's long-standing Tuition Refund Plan under which GM employes are reimbursed tuition fees after successfully completing educational courses related to their employment.

The plan provides for "up-front" money and requires only that courses selected by eligible laid-off workers be taken at accredited or licensed schools. Courses of study need not be related to the laid-off workers' previous GM employment.

"As a result of the 1982 negotiations, GM and the UAW have embarked upon an ambitious undertaking — providing working and laid-off members opportunities for education and retraining that will prepare them to re-enter the workforce and rebuild for the future," Ephlin and Warren said.

Ephlin and Warren said the plan will provide for tuition assistance from a special GM-UAW fund. Tuition will be paid directly to the schools teaching the course in which the participant is enrolled. Qualified workers will be eligible for tuition years or a total of $4,000.

Depending on their seniority with GM and layoff status, program participants may qualify for tuition assistance up to four years or a total of $4000.

The new program is another step toward worker retraining and job placement undertaken by GM and the UAW as a result of the labor agreement they signed in March, 1982.

The 1982 agreement established a Joint Skill Development and Training Committee to promote training, retraining and related activities to upgrade the skills of GM workers nationwide. GM funding of five cents per straight-time hour worked by UAW-GM workers was established under the agreement to assist laid-off workers in this regard.

Several training, retraining and job placement programs initiated by GM and the UAW since 1982—including those at Fremont and South Gate, Calif., and in Flint and Pontiac—also are funded by the so-called "nickel an hour fund."

Giving away the Bull

Customers at six Atlanta Pontiac dealerships and area Schlitz sellers filled out entries to win the Schlitz Malt Liquor Bull Trans Am. Greg Baranco, left, a representative of the Atlanta Pontiac Dealers Assn., congratulates the winner, Roy Dixon.

Mid-December total swells by 25 pct.

'83 best car-sales year since '79

By Jenny L. King
Staff Writer

Domestic new-car sales were up more than 25 percent in the mid-December period as they swelled the year-to-date total to a point higher than the full year of 1980 and brought to 30 the number of 10-day periods with improvements over 1982 sales levels.

This year's total will be the best for the domestic industry since 1979 when 8,315,622 new cars were retailed.

Dec. 11-20 sales of 179,749 were up 25.23 percent from 143,530 a year earlier. It was the strongest mid-December in four years.

Year-to-date sales reached 6,588,692, better than the full-year totals for 1982 (5,756,660), 1981 (6,206,296) and 1980 (6,578,275).

All the major auto makers reported sales gains for the period, with Volkswagen pacing the group. VW sales were up 35.70 percent, to 2,163 from 1,594 in 1982. It was followed by General Motors, where sales were up 25.05 percent, to 106,284 from 84,993.

Ford Motor Co. sales were up 22.19 percent, to 41,358 from 33,848. Chrysler Corp. reported sales of 22,922, up 18.19 percent from 33,848. American Motors reported estimated sales of 4,000 passenger cars, up 8.11 percent from 3,700 a year earlier, and Honda sales of U.S.-built Accords totaled 3,022.

• GM earned 59.13 percent of the mid-month domestic market, down slightly from 59.22 percent in 1982. Ford took 23.01 percent, down from 23.58 percent. Chrysler's share of 12.75 percent was down from 13.51 percent. AMC held 2.23 percent, down from 2.58 percent, VW had 1.20 percent, up from 1.11 percent, and Honda had 1.68 percent of the current year's mid-December market.

The only domestic makes reporting sales declines were Lincoln (down 15.33 percent) and AMC (down 39.19 percent). Plymouth was up 9.09 percent, Chrysler was up 50.58 percent and Dodge was up 7.59 percent.

At Ford Motor Co., Ford was up 29.53 percent, Mercury was up 15.70 percent and Lincoln was off 15.33 percent. At GM, Buick was up 0.20 percent, Cadillac was up 12.21 percent, Chevrolet was up 24.32 percent, Oldsmobile was up 27.44 percent and Pontiac was up 68.64 percent.

AMC was down 39.19 percent while U.S.-built Renaults were up 41.94 percent. VW was up 35.70 percent and Honda had no year-ago sales for comparison purposes.

With eight selling days in the period both years, the daily selling rate was up 25.23 percent, to 22,469 from 17,941. Annualized sales based on the mid-December performance figured to 8.3 million units.

Nissan develops AC motor for electric car

TOKYO.—Nissan has claimed a first in Japan — the development of an AC motor for an electric car.

The motor has been installed in a Micra car in conjunction with an experimental nickel-iron alkali type battery.

To convert the DC power from the battery to AC, a transistor inverter which also acts as a controller is used. Another innovation is the use of a two-speed electro-magnetic automatic transmission.

With an output of 10 kW, the motor can drive the Micra at up to 55 MPH, and has a claimed range of 100 miles. However, the 18 units in the battery weigh 800 pounds and occupy the space normally provided for the rear seats and luggage.

AC motor for Nissan electric

Nissan has developed an AC motor for electric cars and installed it in a Micra in conjunction with an experimental nickel-iron alkali type battery. The 800-pound battery occupies the space normally provided for the rear seats and luggage.

Arizona bank opens dealer loan department

PHOENIX. — First Interstate Bank of Arizona has opened a new Dealer Commercial Loan Department.

The office will handle capital loans, flooring lines of credit, demonstrator lines of credit, daily rental service and lease lines of credit.

Wirth wants DOT to probe GM brakes

WASHINGTON. — Colorado Rep. Timothy Wirth has gone over the head of NHTSA's chief officer, Diane Steed, to ask Transportation Secretary Elizabeth H. Dole to "personally" look into the matter of possible rear-brake lockup on General Motors' A and J-cars — a matter about which Steed recently told Wirth there is insufficient reason to "open any investigatory action."

Wirth heads the House Commerce subcommittee, which has oversight jurisdiction over NHTSA.

Wirth also asks Dole to investigate brake lockup on GM 1981-83 X-body cars. Wirth says he is aware of "some 60 accidents, 26 injuries and seven deaths" alleged to be caused by later model X-car brake problems. The government case now pending against GM X-body cars with alleged safety problems because of rear-brake lockup involves over one million 1980 models.

Wirth urged Dole to "ensure personally" that NHTSA fulfills its statutory mission, especially since the "agency's track record over the last three years is extremely disappointing and poses grave dangers to the driving public."

With regard to possible brake problems on A and J-cars made by GM, Wirth says that despite the fact that the court case involved charges that GM supplied false and misleading data at least 27 times in the 1980 X-body data despite the fact that the same front-brake caliper problem exists in both cars, according to GM documents, and despite the fact that GM has told dealers to fix the problem and will itself make changes in future models.

NHTSA still refuses to look further. At minimum, says Wirth, NHTSA should open an engineering analysis and test the vehicles in question.

Further, it should issue a press release to warn the public. Finally, says Wirth, he finds it hard to believe that NHTSA has no complaints, especially since the Center for Auto Safety says it has sent to NHTSA 17 complaints.

Carolina dealers form AUTOCAP

RALEIGH, N. C. — The North Carolina Automobile Dealers Assn. has formed an Automotive Consumer Action Program (AUTOCAP) mediation panel to help new automobile and truck buyers resolve problems with dealers and manufacturers.

The association said the 689 franchised dealers in the group, or 99 percent of the new-car dealers in the state, had agreed to abide by the panel's decisions on complaints by buyers, although the decisions will not be legally binding on either the dealer or the buyer, either of which will be able to take other action if dissatisfied with the panel's ruling.

The four dealers chosen to serve on the AUTOCAP panel are: T. Cary Iderton, High Point; Michael Leith, Raleigh; Joe Nelson, Rocky Mount, and George Lyles, High Point. Four consumer members also were named.

Power brakes and steering continue to gain popularity

By Joseph Bohn
Marketing Editor

Power steering and brakes are pretty nearly standard among domestic car models.

Where they are optional, their popularity continues to grow, an AUTOMOTIVE NEWS survey of domestic '83 models shows.

Other power equipment items like power side windows and rear window defrosters (some divisions call them defoggers) also continued gaining popularity on '83 models.

The industry installed power brakes in 93.83 percent of its domestic models, up from 89.92 percent in '82.

And it installed power steering in 90.62 percent of models, up from 88.15 percent the previous year.

Power side windows, which tend to fluctuate more or less with sales of more expensive and larger cars, also increased to a 38.75 percent penetration from 29.88 percent penetration in '82.

Finally, rear window defrosters showed a 60.19 percent penetration up from 55.50 percent in '82.

This option has been steadily growing in popularity over the years. It is still standard on only a few high-priced luxury lines.

O'Grady joins Chase

BALA CYNWYD, Pa.—Thomas F. O'Grady, formerly with General Motors in market anaylsis and forecasting, has joined Chase Econometrics as director of the auto industry forecasting service.

'84 Cadillacs "Extended Body" Limos
☆ *Also '84 Lincoln Limos*

"AMERICAN CUSTOM COACHWORKS, LTD."
☆ $29,900 ☆

When you want the very best value and quality, then you definitely must "talk to us before you buy elsewhere." Our prices start at only $29,900 and you can choose from cars in production or place your order to build a limousine to your specs or you may choose from an inventory of 39 limos of different sizes, models, prices, etc. Cars may be ordered with electric rear moon roof, chauffeur divider window, rear A/C, intercom, color TV and console, rear stereo/tape, electric bar, prem. tires, custom interior, heavy duty suspension, etc., etc.

NOTE: Tempo/Topaz, despite being '84 models, are included for the period they were built during the '83 run. The same is true for Corvette. Some models built principally or solely in Canada are included to give an accurate picture of industry rates.

GM says its future is clouded

St. Louis fights to keep truck plant

By Jack Bernstein
Staff Correspondent

ST. LOUIS. — Mayor Vincent C. Schoemehl Jr. has established a committee of civic, community and labor leaders in an effort to make sure that General Motors doesn't close its 60-year-old light truck plant here, which employs 2,300 people.

Schoemehl took action when it appeared that relations between management and union had soured, primarily over the abandonment by UAW Local 25 of the Quality of Work Life program.

Earlier, the company had indicated that this facility might receive additional work from the Janesville (Wis.) plant that had been assembling pickup trucks. In addition, St. Louis was being considered for a new line of trucks after 1986.

Schoemehl is concerned about the loss of jobs and tax revenue and is said to have made a trip to Detroit to appeal to GM leaders. However, it is believed that he was informed that GM would pump no new money into the plant unless it was assured of labor harmony.

In recent years, some of the domestic auto manufacturers have become interested in quality circles and additional employe involvement since this had been regarded as a positive factor in increasing Japanese productivity.

However, it has become a local issue. The president of the local, Harold Gray, opposes the program on the basis that it will injure the union's seniority system.

Since Local 25 dropped the program in August, conditions reportedly have become worse with more confrontations and grievances about violations. GM officials have attempted to reinstate the program but have met with no success.

The company has made it clear that the St. Louis plant's future remains clouded. It is the only one of seven Truck and Bus Group plants operating without a Quality of Work Life program.

Modest recovery for European truck output

Competition to intensify among makers and markets

There will be a modest recovery in European truck production in 1984, according to DRI Europe, but its latest forecast report for the industry says the increase will stem almost entirely from the reviving European market.

No significant growth in non-European sales can be expected before 1985. "While 51 percent of medium and heavy truck output in the seven main European truck producing countries went elsewhere in 1982, this ratio is forecast to fall to 39 percent in 1985, before recovering slightly later in the decade," the report says.

The result will be even more cut-throat competition within the various national markets of Europe, as makers struggle to maintain volumes.

No let-up in the price war that has affected France and the UK in particular can readily be foreseen.

"The nascent recovery in the U. S. heavy truck market will provide only limited relief to the European producers involved there, with most other non-European markets likely to see minimal revival at best over the year," predicts DRI.

In the four largest EEC markets — West Germany, France, the UK and Italy—combined new registrations of medium and heavy trucks are expected to rise by less than 6 percent in 1984. The anticipated decline in the light commercial sector is expected to continue.

Recovery should accelerate slightly in 1985 as the French market expands after 1984's fall. Except for light commercial vehicles, for which DRI sees some potential for further market growth, no sector is forecast to exceed its pre-recession peak during the rest of the decade.

• Turning to the major national markets of Europe, DRI says West Germany's exports of medium and heavy trucks to Africa and the Middle East collapsed by a third in 1983. "Only Daimler-Benz's huge marketing strength and local assembly commitments have prevented an even larger fall," notes DRI.

The 1984 export outlook is no more promising, with fewer large spot orders from Iran and Iraq and continued curtailment of development projects in many key markets. It will be 1985 before firming of crude oil prices and higher developed world oil consumption restores the financial positions of the important OPEC customers of the German capital goods industry.

Capacity utilization in truck production will remain low until the second half of the decade, the forecasters believe.

In contrast to export demand, domestic consumption of trucks during 1983 recovered far more rapidly from recession than anywhere else in Europe, chiefly as a result of the investment support scheme expiring at the end of 1982 (but allowing delivery any time during 1983 and 1984).

The payback for fast recovery during 1983 will be two years of minimal growth during 1984-85.

France looks set to be the weakest European truck market over the next two years, following relative stability throughout the recession, DRI says.

Demand for both light and heavy commercial vehicles will drift in the face of sluggish consumer and investment spending. Extensive discounting now in evidence will fail to hold truck sales as industrial production and demand for road transport services fall substantially fall.

French exports improved during 1983, largely due to Algerian sales. "The worst effects of the OPEC collapse have been avoided, simply because the French industry never participated in the boom," DRI states.

It notes a continued drop in the share held by Renault Industrial Vehicles (RVI). In the face of intense competition from other European makers, RVI's market share went down from 45 percent in 1982 to 36 percent last year—and continues to look vulnerable.

The forecast group identifies a more positive mood in the UK for 1984. The new 38-ton weight limit and recovery in the economy are factors. In addition, light commercial sales are expected to fall this year following the car market-inspired rise in 1983.

Very little expansion of output is currently expected in 1984 in Italy by either the light or medium/heavy sectors as recent share gains in other EEC markets come under pressure.

Italian production levels did not fall in line with the market decline last year, partly due to resumption of truck deliveries to Algeria following the ending of a trade dispute between the two countries. "In 1983 the Algerian market has proved less volatile than that of the Middle East," reports DRI.

Last year was another difficult one for the Spanish industry, as medium and heavy truck sales resumed an almost unbroken downward trend since 1974. But a period of steady and modest expansion of sales and production is now in prospect as the economy starts to grow more strongly.

Spanish sales in Europe are expected to meet strong resistance from other exporters and indigenous producers, and sales outside Europe are expected to fall back after Enasa's contract with the Egyptian armed forces finishes in 1984.

Sweden will record a third successive decline in medium and heavy truck production when 1983 figures are published. But DRI believes this is a comparatively successful outcome for a year in which Swedish truck exports outside the EEC slumped by a quarter. It points to last October's currency devaluation as one factor.

This year it believes production will rise by 8 percent, and in the longer term output is expected to exceed the 1980 peak of 55,000 units.

Car pricing is a major concern in Europe

EEC to invoke 12 percent limit on variances among nations

By Richard Feast
European Editor

The European auto industry has several major concerns as 1984 begins. Perhaps its greatest lobbying efforts will be concentrated on fighting far-reaching price control proposals.

The European Community Commission's plan to introduce a 12 percent limit on the variation of prices between member states has united the industry as seldom before.

The Commission is still listening to evidence following publication of its draft proposal last summer. Some sort of decision is expected in the early part of 1984, though if it wants the Commission could put the regulation into effect without reference to European or national parliaments.

At the same time, debate over introduction of lead-free gasoline in West Germany (and the UK) continues as a divisive force between governments and car makers.

In another dimension, the demand for a 35-hour working week in West Germany appears concentrated on the auto industry. A sharp increase in costs is predicted, which will have a knock-on effect throughout Europe, especially those countries which have manufacturing ties with Germany — Belgium and the UK.

The price debate stems from the fact that car prices, even in pre-tax form, vary considerably within the 10 member states of EEC. In general, they are high in the UK, low in Belgium.

Part of the reason stems from the high manufacturing costs in the UK. Over the years this led to higher car prices, though there is plenty of evidence that prices were passed on to customers at a greater rate than inflation at the time justified.

The consumer backlash took the form of private UK buyers making trips to Belgium and Germany, where they found prices of even British-made models a third cheaper than at home.

The scale of the so-called gray imports was not known, but it was substantial and sufficient for Ford of Germany to stop selling right-hand-drive models to customers in mainland Europe.

That was in May 1982. Following a protracted legal argument — still not finally settled — Ford was told by the Commission to recommence RHD deliveries.

The affair was symptomatic of the discontent felt by consumers, and the powerful consumer bodies, over car makers' pricing policies. There has been some narrowing of the differences since the BEUC — the association of European consumer unions — first started comparing prices, but its most recent study added fuel to the Commission's cause.

In October 1983 prices on average were 12 percent more in France than in Belgium. In Germany they were 15 percent more, but in the UK the premium was 38 percent. It found that a BL Metro was half as much again in the UK as in Belgium.

The BEUC study was of pre-tax prices. The complexity of the situation, however, is apparent when it is realized that Denmark has the lowest pre-tax prices, but the highest drive-away prices because of sales taxes.

In the words of Carleric Haggstrom, Volvo Car Corp. senior vice president, "In Denmark the consumer pays the most for a car whereas the manufacturer receives the least.

"In accordance with the Treaty of Rome of 1958, the EEC parliament should thus concentrate on harmonizing the taxes between the member states."

Horst Avenarius, PR Director of BMW, makes another point. He says that domestic manufacturers with large shares of their own markets determine supply and prices "Substantial under-cutting by foreign suppliers could have serious consequences for the industry confronted with competition from imports. The danger of import restrictions would then be great," he believes.

A further underlying cause of price differences can be seen in cycles of business that continue to differ within even the Economic Community. In adjusting their prices to boom and recession phases, the auto suppliers are only following the rules of free competition, according to Avenarius.

He adds, "In addition, extraneous factors contribute to differences in price. For example, wild short-term fluctuations in exchange rates within the European Monetary System (EMS) distort pricing by up to 4.5 percent. Currencies outside the EMS can experience price swings of 20 percent or more, for example the British pound sterling."

Other factors are state price controls and price indexing which prevent adjustments which conform to market trends —France and Belgium, for example.

Klaus Vacano, head of central sales planning at Volkswagen, calls the 12 percent, "arbitrary."

"It is erroneously concluded from the existence of price differentials that competition is lacking, and insinuated that the manufacturers are misusing the system of selective sales," he states. "In fact, the opposite is the case. Competition in the automotive market is extremely keen."

He traces the differences to market demands, in policies for monetary, credit, and tax and to exchange rates. He also warns that the regulation could break up existing sales systems by allowing non-authorized dealers to trade.

"In this way the advantages

Prices

Continued from Page 25

which the customer has today in the form of warranty, an effective service, value maintenance of the vehicles, maintenance of the operating safety of the vehicles, environmental acceptability, etc., would be jeopardized or even in part disappear," he says.

A spokesman for Austin Rover —one of the companies likely to be most affected by the Commission proposal—believes any benefits would be short-lived.

"It might be thought the proposals hold out the prospect of lower UK car prices and are therefore to be applauded. We believe that such a view would be a very superficial judgment.

"Overall the proposals are not in the consumers' best interest and, in any event, any short-term price benefit must be weighed against the strong probability of lasting damage to the EEC motor industry and to employment within it," maintains Austin Rover.

John Waddell, vice president, public affairs, Ford of Europe, makes a similar point. "These provisions would severely reduce the European industry's profit, or, more accurately, increase its losses. The industry's long term viability will be threatened, making plant closures inevitable."

He adds, "It seems to me that the Commission's real motives are to use the European automotive industry as a means of putting pressure on national governments to harmonize their economic practices.

"Although it is true that manufacturers cannot be held responsible for the very real differences in economic conditions on each national market, the fact remains that by adopting specific price policies, thus partitioning off national markets, they are sanctioning and consolidating the very economic differences which they denounce.

"They insulate national markets into so many independent economic entities and are neutralizing the effect of economic integration which should follow from the development of intra-community trade."

Saab will spend $20 million to boost capacity

Saab is planning to invest nearly $20 million to increase its production capacity. Most of it will go into the main Trollhattan plant in western Sweden, but additional funds are also going into Arlov.

The result will be an additional 20 percent capacity by the beginning of 1985.

With improvements in the body and paint shops, Trollhattan will be capable of producing 90,000 units a year (up from 75,000), and Arlov final assembly will be raised from 15,000 to 22,000.

Together with capacity at the Uusikaupunki plant in Finland, Saab production could hit 120,000 a year.

It is now producing at an annualized rate of 102,000—the maximum ever achieved.

Continued strong worldwide demand, particularly from the U. S., led to production of the 100,000th Turbo model recently.

But the extra capacity is really needed to enable Saab to slot its all-new model into the catalogs alongside its current range.

The new model, which started life as a joint production with Fiat Auto's Lancia Division, is expected to debut in early 1985. It will fit into a category above the 900 series.

Digital clock, instrument panels, tilt wheels all up

Electronic options gain on '83 cars

By Joseph Bohn
Marketing Editor

Electronic componentry is one of the fastest-growing optional equipment areas.

And a survey of '83 domestically built cars shows that digital clocks and electronic instrument panels, for example, have gained a lot of new ground.

Meanwhile, tilt and tilt/telescopic steering wheels continue to gain because of their convenience in smaller models.

Digital clocks in one form or another ended up on 43.09 percent of domestically produced cars in '83, up from 34.30 percent the previous year.

Digital clocks are offered in various combinations — by themselves or with various types of radios.

General Motors, for example, offers digital clocks with AM pushbutton radios; AM/FM stereo electronically tuned radios (ETR), excluding seek/scan functions; AM/FM stereo cassette with graphic equalizer ETR; AM/FM stereo cassette with graphic equalizer ETR, excluding seek/scan and so forth.

Meanwhile, electronic instrument panels went on 3.12 percent of domestic models last year, up from 1.90 percent in '82.

They are still limited in availability, but have become standard on some models, like Pontiac 6000-STE.

Tilt wheel was carried on 50.34 percent of industry production, up from 46.1 percent in '82.

And tilt and telescope, confined to GM cars, was carried on 5.11 percent of production, up from 4.5 percent in '82.

It's an item that GM still reserves for its high-priced lines, like Corvette, where it's standard.

Note: Tempo/Topaz, despite being '84 models, are included for the period they were built during the '83 run. The same is true for Corvette. Some models built principally or solely in Canada, are included to give an accurate picture of industry rates.

20th anniversary for San Jose Datsun

Accepting a plaque commemorating their 20th year in the automobile business are, from left, San Jose Datsun owners Tory Cerrito, Roy Cerrito, Stephen Cerrito and Jack Hilleary. In 1963, the store was named San Jose Imports and shortly following that, they took on the Datsun line.

Automotive exports in black, Mexican report contends

MEXICO CITY. — Despite the critical condition of Mexico's automotive industry, the Mexican Foreign Trade Institute released figures claiming that there was a turnabout in export operations in the first nine months of this year.

In giving out information on exports of Mexican manufactured goods, the institute said that the auto industry spurted from a $785 million dollar deficit in the first nine months of 1982 to a surplus of $164 million for the same period this year.

There has been no confirmation of this statement of an amazing turnabout from red ink to black in export operations for this year.

The institute said that the huge comeback in the automotive sector was part of overall improvement in exports of non-crude manufactured products which came to a total of more than $352 million, for an 11.1 percent increase over 1982. (This figure does not include other exports of mining, steel, metallic and non-metallic products.)

Auto industry exports dominated the about-face in foreign sales, with the institute pointing out that the increase was due to exports of engines, which accounted for $248 million of the gross export total for the sector.

NADA premise is faulty, he says

Bidwell attacks fleet subsidy bill

By Geoff Sundstrom
Washington Staff Writer

JACKSON, Miss.—An NADA-backed bill that would outlaw manufacturer-offered incentives to fleet buyers is "anti-competitive, costly to consumers, and would inhibit a manufacturer's ability to provide merchandising programs to its dealers," according to Bennett E. Bidwell. Chrysler executive vice president.

Bidwell used the occasion of a Congressional field hearing here to express Chrysler's disapproval of the so-called fleet/lease bill.

Also testifying were the American Automotive Leasing Assn., Automobile Importers of America, Inc., American Automobile Leasing Assn., and the American Car Rental Association.

NADA President William C. Turnbull and the bill's house sponsor, Gene Taylor, Missouri Republican, also testified before the subcommittee on Commerce, Transportation and Tourism (AUTOMOTIVE NEWS, Dec. 19). Subcommittee Chairman James Florio, New Jersey Democrat, chaired the hearing, which was located in the home district of Mississippi Democrat Wayne Dowdy.

Bidwell, who served as president of Hertz before joining Chrysler, said that NADA's bill is "based on a faulty premise, namely, that individual car buyers must pay more to make up for incentives given to fleet buyers."

The reverse is true, he said, because the existence of fleet sales programs actually help to hold down the price of cars to individual consumers. Fleet orders planned in advance keep plants operating in periods of reduced demand, promote smooth production and delivery schedules and offer a measure of predictability in sales that help manufacturers and dealers meet their fixed costs, he said.

Bidwell said that if Chrysler's "fleet incentives and the sales produced by them had not been present . . . I think Chrysler would have gone down the tube."

He criticized Turnbull's estimate that fleet incentives often cut the cost of vehicles by $1,000 under the price paid by the franchised dealer. Bidwell said, "The $1,000 per-unit-numbers thrown around by the proponents of H.R. 1415 are preposterous."

"In fact, in the 1982 and 1983 model years, Chrysler spent more than four times as much for discount and incentive programs to dealers and retail customers as it spent on fleet discounts.

"These programs took the form of customer rebates, discount financing programs, and the free, five-year, 50,000 mile warranties . . . all of which were not offered to fleet accounts," Bidwell said.

"One of the inevitable outcomes of H.R. 1415 would be the sharp curtailment of incentive programs for dealers and retail customers," Bidwell said. "Without the fixed cost coverage for fleet volume, manufacturers couldn't afford them."

Ford-Mercury outlet

BREMAN, Ind. — Nine Ford Sales has added the Mercury franchise.

Small-car, big-car groups due in GM restructuring

Detroit, which has been abuzz with General Motors rumors for several weeks, is about to learn details of the auto maker's latest restructuring.

Elaborate plans have been made to guard the changes in secrecy before making the announcement internally tomorrow morning (Jan. 10). GM directors, meeting today, will put the final stamp of approval on the changes.

Expected to be a key part of the GM move is approval of a consolidation of car divisions and the Assembly Division into big-car and small-car groups and the appointment of group executives to head them.

Lloyd Reuss, currently general manager of Buick, is slated to take charge of the big-car group, including Buick, Oldsmobile and Cadillac. He has spent long days at GM headquarters in recent weeks.

Robert C. Stempel, now general manager of Chevrolet, will be named group executive of the small-car group, covering Chevrolet and Pontiac.

Other personnal reassignments are expected.

GM has invited its top-level executives (staff heads and above) to the General Motors Building in Detroit for a personal briefing on the new structure at 10:30 a.m. tomorrow.

Other employes on the bonus list will receive the details through video-tape presentations at their home divisions. Those presentations are also scheduled for 10:30 a.m. tomorrow, with video tapes being turned over to the divisions only one hour beforehand.

• Asked about the Tuesday announcements, a GM spokesman, reciting a prepared statement, said that GM had scheduled a meeting for its executives to review "success in meeting" its business objectives in 1983, as well as the outlook for 1984. Such meetings are not unusual, he said.

How divisional structure will be changed was unclear at presstime, but it is believed that divisions will continue to have general managers, although they will no longer be corporate vice presidents.

It is believed that two of the current general managers (and vice presidents) will be sent to overseas assignments and another (also a vice president) will take early retirement. There may be other early retirements a bit later.

Under the new group setup, each group is slated to take over administrative, engineering and manufacturing functions. Sales and marketing responsibility would remain with the divisions.

There is also slated to be a realignment of product.

• In the small-car group, Chevrolet and Pontiac would offer nothing larger than an intermediate. In the big-car group, Buick, Oldsmobile and Cadillac would lose most of their small cars, up through compacts. Remaining small cars in the big-car group would be high-line versions of price-leaders marketed by the small-car group.

In other words, products are to be split more on a basis of price, rather than on size.

No changes are expected in divisional field organizations. For example, Chevrolet field reps would still call on Chevrolet dealers.

But there is a strong possibility of more dual dealerships.

One GM source sees fewer but larger GM dealers. The source

Tire excise dies; cars cut $7-$14

By John K. Teahen Jr.
Managing Editor

Big Three new-car prices were reduced last week, but the cut isn't likely to kick off a sales boom. The reductions ranged from $7 to $14.

The Big Three action resulted from the Jan. 1 elimination of the federal excise tax on passenger-car tires.

General Motors cut sticker prices from $7 on Chevrolet Chevette and Pontiac 1000 to $14 on Corvette. Both Chrysler Corp. and Ford Motor Co. posted dips of $8 to $12. Ford said the average was about $10.

Base prices of most Big Three

Convertible for Avanti

Prototype debuts at L.A. show

Avanti Motor Corp. is premiering this prototype of its first convertible model at the Greater Los Angeles Auto Show this week. The body is constructed of a new fiber-reinforced plastic, while the interior has been redesigned. The convertible is powered by a General Motors 305 CID V-8 HO engine, which yields 200 HP.

NADA registration up; show space is record

WASHINGTON. — The economic rebound is being directly reflected by NADA's 67th annual Convention and Exposition Feb. 4-7 in Dallas.

Advance registration is running 14 percent ahead of last year, NADA said, leading to expectations of over 15,000 attendance at Dallas.

Exposition space has set an NADA record and the largest workshop scheduled in NADA history is on tap. Nearly 140,000 square feet of exposition space have already been reserved, with 210 exhibitors displaying automotive and dealership products and services.

A first for the NADA convention will be an additional exhibit hall, primarily featuring van conversions.

The annual Time Magazine Quality Dealer Awards will be presented at the opening convention session on Saturday, Feb. 4.

Outgoing NADA President William C. Turnbull Sr. will join Transportation Secretary Elizabeth Dole on the rostrum during the opening session.

• Dole is one of three guest speakers. Later convention sessions will feature Art Linkletter, television personality, and James J. Kilpatrick, columnist.

James F. Jennings, 1984 NADA president, will precede Kilpatrick at Tuesday's general session which has been moved up this year to 11 a.m.

Linkletter will lead a nonde-

Imports and domestics share gain; Buick and Olds crack records

1983 car sales of 9.2 million highest since '79

By Jenny L. King
Staff Writer

All things considered, it was a very good year for the U.S. auto industry, it was an excellent 1983 for the imports and it was a smashing 12 months for several makes including Buick, Oldsmobile, the U.S. Renault and several imports.

The domestic industry finally appeared back on track, finishing the 1983 calendar year with 31 out of 36 reporting periods on the plus side and surpassing 1982, 1981 and 1980 sales totals. Imports enjoyed their second-best year in the U.S. market and were up 7.25 percent over 1982.

Domestic auto makers reported sales of 6,795,302 new passenger cars in 1983, up 18.04 percent from 5,756,660 a year earlier and highest since 1979 when 8,315,622 units were retailed.

Import sales reached 2,382,475, up 7.25 percent from 2,221,398 in 1982. Record sales for imports were notched in 1980: 2,395,218.

Grand total for 1983 was 9,177,777, up 15.04 percent from 7,978,058 in 1982.

Domestics sales in December, best since 1978, were up 24.86 percent, to 559,421 from 448,048 a year earlier. Imports were up 4.92 percent in December, to 192,867 from 183,827. Grand total for the month was 752,288, up 19.06 percent from 631,875 in 1982.

Imports accounted for 25.96 percent of the 1983 market, down almost two percentage points from the record 27.84 percent they claimed in 1982.

SALES AT A GLANCE

	1983	1982	Percent Change
Domestic	6,795,302	5,756,000	+18.04
Import	2,382,475	2,221,398	+ 7.25
TOTAL	9,177,777	7,978,058	+15.04

• Two General Motors divisions, Buick and Oldsmobile, reported record sales in 1983. Buick, with an 845,033 total, beat its former peak of 800,586 set in 1978; Oldsmobile erased the record attached to its 1978 total of 1,006,344 and rewrote it with the 1,007,559 sales attained in 1983.

U.S.-built Renaults took off in their first full year on the market and Ohio-assembled Honda Accords climbed to first-year sales of more than 50,000.

Volkswagen was the only domestic auto maker failing to match its year-ago total. VW was down 6.71 percent, to 85,045 from 91,166. American Motors, boosted by its domestic Renault sales, made the greatest comeback. AMC sales were up 71.97 percent, to 193,351 from 112,433. Renault Alliance and Encore represented some 76 percent of the AMC total (126,008 for Alliance and 20,182 for Encore).

General Motors finished the calendar year with a 15.30-percent increase in sales, climbing to 4,053,561 from 3,515,660. Ford Motor Co. was up 16.77 percent, to 1,571,321 from 1,345,698. Chrysler Corp. was up 21.67 percent, to 841,622 from 691,703. Honda sales totaled 50,402 in 1983.

GM's share of the domestic market was 59.65 percent in

breaking news

GMC sales crack December record

PONTIAC. — With record December sales, GMC truck dealers posted a four-year sales high in 1983. Calendar-year sales of 264,148 represented a 15-percent gain over the previous year's 228,934. It was the best 12-month showing for GMC since 1979, when deliveries totaled 290,363. Sales of 23,708 set a record for December, erasing the former peak of 22,819 established in 1979.

GM to reimburse diesel owners

WASHINGTON. — General Motors has agreed to reimburse 24 members of the Disgruntled Diesel Owner's Group here an average of $2,000 for repairs on GM diesel-powered cars and trucks, DDOG announced. The group submitted the 24 trial claims to test the effectiveness of a special claims procedure outlined between GM and the DDOG last July. The group now plans to provide GM with a list of 3,256 additional members who submit repair claims.

State becomes a separate sales region

Chrysler zeroes in on California

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—In an effort to improve Chrysler's California market share, the company has realigned its Western sales zones creating a separate region for the state, according to Bennett E. Bidwell, Chrysler's executive vice president of sales and marketing.

Bidwell told the Western Chapter of the International Motor Press Assn. the new region will be known as Chrysler California and will have its own sales and marketing organizations with separate budgets.

By creating Chrysler California, the company has pulled the state out of a zone that included Arizona and Nevada. The realignment has also caused a new Phoenix sales zone to be formed, which includes Arizona, Nevada, Utah, New Mexico and El Paso County, Tex. Bob Frank has been named to head that organization.

In California, Pat Smorra has been named general sales manager. Reporting to Smorra will be Dwight Goad, San Francisco zone manager and Clark Vittuli, Los Angeles zone manager.

Bob Shaw will remain director of the California marketing office, and Dodge and Chrysler-Plymouth marketing managers will be appointed later.

"The emphasis from this point on will be on our domestic products as well as our import products," Bidwell said. "We expect to see the market-share gains of the next few years fall on the domestic-built side of the ledger."

• Bidwell said that when the California marketing office was established, it directed its efforts toward boosting Chrysler's share of the import market by emphasizing the Mitsubishi product.

That effort has helped Chrysler increase California penetration, which has seen sales rise 34 percent over the last year. Yet it's still below the company's target.

"We're at about 7.5 percent of the market in California, and that's about 2.5 points (or one-third if you think of it that way) below our national share," Bidwell said.

"Now, in a way, that's not bad when you think what the importers carry away from this market. But if you take our own import business out of the total, it isn't that good either."

As a result, Chrysler California will step up its activity on domestics and has been given an ad budget of between $15 and $20 million.

"In short, we mean business here," Bidwell said. "And by business, I mean at least 10 percent share of the total market, car and truck. The reason that I combine them is because the T-115s are sold as multi-purpose vehicles (meaning they count as trucks) and the lines are getting blurred.

"Ten points is a big jump from 7.5 points . . . it's a 33 percent increase. And it won't come easily because everybody's working this state and because the import quotas have just gone up another 10 percent. Unchallenged, that alone would take us down below a 7-percent share. But we'll get to 10.

"We're projecting that these figures will translate out to a 50 percent increase over the next five years from about 90,000 units sold in 1983 to approximately 135,000 in 1986," Bidwell said. "About 90 percent of this increase will be in domestic vehicles."

• When questioned about press reports that Mitsubishi has announced a joint venture with Chrysler to produce 200,000 vehicles in the U. S., Bidwell said he wasn't aware that such a deal was close to announcement.

"We are studying the possibility, but there's nothing definite that I'm aware of," he said. Bidwell did note that Mitsubishi "is more interested in it than they were a year ago."

If such an agreement is reached, Bidwell said one of the problems is finding a place to build the car and, in fact, the lack of facilities is partly why Chrysler has been unable to come to terms with Mitsubishi.

Down the road, however, Bidwell does see the capacity. "We're not going to have 10 million car years forever," he said.

Bidwell also took the opportunity to blast again the pending joint venture between General Motors and Toyota in Fremont.

"The whole venture planned for there stinks and, in our judgment, is illegal,' he said.

Bidwell added that GM's Japanese strategy, to build cars with Toyota in California and import more small cars from Isuzu and Suzuki, is "tantamount to GM tossing in the sponge on up to 30 percent of the total market in this country. The implications, for jobs in this country and competition in this country, are monstrous."

Responding to criticism that Chrysler imports Japanese cars and is planning a joint venture of its own, Bidwell said such a linkup would be of a U. S. company one-fifth the size of GM with the fifth Japanese car maker.

"If Chrysler and Mitsubishi built cars together here, it could accurately be called a joint venture," Bidwell said. "When GM and Toyota do, it's not a joint venture . . . it's the world's biggest cartel. And a bad deal with no economic justification, all the way around."

Commerce Dept. delivers its Industrial Outlook

13.6 million vehicle sales predicted

WASHINGTON. — New-car and truck sales will reach 13.6 million units in 1984 and production will hit 10.3 million units, according to the Commerce Department's Industrial Outlook forecast.

However, the department's economists warned that their forecasted 11.5 percent increase in sales for 1984 and 10.8 percent increase in production could falter if interest rates rise substantially this year.

But the government does not see that happening for now and predicts that domestic-car sales will rise 11.6 percent to 7.7 million units while imported-car sales will reach 2.5 million units, an 8.7 percent improvement.

Based on its production estimates, the Commerce Department sees capacity utilization in 1984 for passenger-car manufacturing at 75 percent compared with 69 percent in 1983 and 53 percent in 1982.

Increased production and sales will translate into another record-breaking year for Detroit in terms of profits, the government believes. Increased consumer spending, low inflation, stable interest rates and steady gasoline supplies will encourage sales of profitable mid-size and large cars, according to the report.

And the rate of increase in new-car prices is expected to remain low in 1984 — in the neighborhood of 2 percent — which will lend the price stability that has been absent in the market in recent years.

Over the longer haul, the industry will continue to face a challenging decade, according to the report. With profits up, the real difficulty will be to settle accounts after a period of unprecedented capital improvements, while at the same time raise the funds necessary to continue an aggressive investment program.

The ability to raise these funds will be crucial in making long-term reductions in production costs, and those costs throughout the decade could well be the biggest factor in meeting import competition, the report said.

But the auto industry may have some difficulty financing increased productivity, the Commerce Department said. This could result from investor worries over a percieved slowing in demand for automobiles.

The growth rate in the driving age population during the 1980s is expected to drop to one percent, compared with 2 percent during the 1970s.

• A slowdown in the increase in consumers' real income coupled with rising food, shelter and energy costs will strain household transportation budgets, the Commerce Department said.

And money set aside by consumers for automobiles will be increasingly affected by the rapidly rising cost of financing, operating, insuring and maintaining cars.

Car owners are also driving their vehicles fewer miles each year than in the past and are apparently holding on to their cars for a longer period.

On the positive side, the portion of the driving age population that falls within the primary new-car buying age group (25-44 years of age) is expected to increase by about 2.5 percent during the 1980s.

Automobile demand uncertainties could be especially difficult for suppliers trying to justify necessary capital improvements to their own operations, according to the report. Auto makers will be relying on those investments to help hold down their own costs and to improve part and component quality.

On the foreign front, Japanese autos will continue to have a landed cost advantage hovering around $1,500 per unit, according to the Commerce Department.

This difference results primarily from lower hourly wage rates, productivity advantages and efficiencies gained through inventory control, product quality and workplace activity. Currency and tax differences were not mentioned.

The Commerce Department said it will take some time to catch up to the Japanese cost advantage because as domestic makers rush to implement product quality and operating efficiency techniques, foreign competitors will also work harder to implement new technologies and managerial innovations.

The Commerce Department warned, "Unless U. S. auto makers make substantial progress in

Historic treasures for sale

Thomas W. Barrett III displays a sample of his classic autos which are slated for auction Jan. 20-22 at the 12th Annual Barrett-Jackson Scottsdale '80s Auction, which will be held at Phoenix Municipal Studium. The auction will offer 600 vehicles, including Shirley Temple's 1940 Buick, President Roosevelt's 1935 Lincoln Touring Car and Benito Mussolini's 1939 Lancia Astura.

Advertising Age names Iacocca 'Adman of Year'

CHICAGO. — Chrysler Chairman Lee A. Iacocca was named "Adman of the Year" for 1983 by editors of Advertising Age.

The trade publication cited Iacocca's guiding Chrysler from a low-point of $1.7 billion in losses in 1980 to a $266 million profit-maker for three quarters of 1983 and his involvement in advertising / marketing as reasons for selecting him.

It called the 59-year-old Iacocca a "chief executive who broke new ground, albeit reluctantly, as a powerful advertising spokesman for his product — and, in fact, for American-made goods generally."

"Product is king" for the veteran auto executive, Ad Age said, quoting Iacocca as saying "I looked at (the job of turning around the company) as a very difficult product task and a quality and productivity task.

"Marketing really means nothing if we didn't have the product that appeals to people. Not just convertibles, but across the board," Iacocca is quoted as saying.

3-year-old suit decided in Wisconsin

UAW claims victory in AMC libel case

By Marjorie Sorge
Labor Editor

A three-year-old Wisconsin libel suit that could have altered the way unions organize and negotiate has been settled in what the UAW terms "a victory" for organized labor.

While the libel suit was very important to the future of unionism in the U.S., an even more important aspect was the National Labor Relations Board's complaint that AMC bankrolled the suit.

The Wisconsin trial stemmed from a $4 million 1980 lawsuit filed by supervisors at the American Motors plant in Kenosha, charging that union activist Jonathan D. Melrod and his associates libeled them in a publication called the Fighting Times. Melrod distributed and published the literature which was not sanctioned by the UAW.

Six plaintiffs filed the original suit. Two dropped out during the trial and a third before.

The judge ruled that the Fighting Times was negligent in an article about one defendant, but the jury found no negligence in articles about the other two and awarded no monetary damages to any of the plaintiffs.

Although the case was three years old, the international UAW did not become involved directly until November when the far-reaching aspects became known. The union's attorneys then filed a brief in support of the defendants.

The UAW was especially concerned because of the union-busting atmosphere in the U.S., a union spokesman said. "Given the political climate, it is another avenue or another gun to pull out to threaten the worker," he said.

The case, filed in Racine County Circuit Court, was the first to be tried since the Supreme Court ruled last May that employers could file libel suits against employes unless the suit is "knowingly frivolous." That determination is now made by the lower courts, not the National Labor Relations Board, the court said.

Two earlier suits filed by AMC and one employe, Steve Freeman, in 1980 were dismissed by the NLRB. Overlapping the NLRB suit, Freeman filed the $4 million libel suit against Melrod in Circuit Court.

In a complaint filed in April, 1983, the NLRB alleged that AMC used its employes as a "front" to bring the suit to court and that the company had been involved in the litigation from the onset.

The complaint further alleged that AMC acknowledged its involvement about Feb. 8, 1983.

The NLRB charged AMC with unfair labor practices.

• According to an AMC statement, the company became involved in the lawsuit only because it "felt a strong moral obligation to support its employes in defending themselves against these personal attacks."

One of the plaintiffs had already hired an attorney, and AMC agreed to advance payments for legal services to other employes mentioned in the Fighting Times articles who wanted to use that particular attorney. The attorney decided if the cases were proper.

"American Motors never had any right to direct or control the lawsuit, never exercised any control or direction over the lawsuit and never attempted to exercise any control or direction over the lawsuit," the statement said.

"The lawsuit was a struggle for personal vindication by individual employes who were the subject of anonymous personal attacks in 1979 and 1980 against the persons who attacked them.

"American Motors has never tried to interfere with the First Amendment or to limit free speech in any way and is fully committed to First Amendment rights. However, the company is also committed to protect its employes from improper personal attacks arising out of their employment and believes it has acted properly in providing the means for these employes to have their day in court."

According to a UAW spokesman, while the union is concerned about Melrod it is also concerned about the long-term consequences of the suit and about the principles involved, specifically its members' "right to express their opinions and beliefs under freedom of speech."

He further said, "It is a concern to us any time an employer bankrolls a case against our members regarding their beliefs.

"We are concerned that this suit could set a bad precedent and weaken the protection workers enjoy under law to communicate and otherwise engage in concerted activity and free speech."

• The UAW feared that if Melrod lost the case, employers could then sue their employes for libel in organizing campaigns, negotiations and other related activities. In organizing drives, workers interested in organizing often publish leaflets accusing management of poor employe relations.

"If an employer could bankroll a libel suit (during organizing), wouldn't that have a chilling affect on the workers?" a union spokesman said.

Joseph A. Szabo, acting regional director of the NLRB in Milwaukee, agreed there is some potential for such situations, but said he was "reluctant to agree that all companies would jump on the bandwagon."

According to Szabo, the big problem now for the NLRB is the Supreme Court ruling. Under the new ruling, if the supervisors had won the case then legally they had a reasonable basis for filing the suit. In that case, it would not have been frivolous, and then there is no case for the NLRB.

However, since the defendants won, the NLRB now must decide if there was reasonable cause for the suit to be brought in the first place.

Further, since the NLRB alleged that AMC had been involved in the suit from the onset, the board must decide if it will proceed on the idea that AMC fostered a retaliatory lawsuit with no basis, Szabo said.

That decision will come from the NLRB in Washington, he said, and will hopefully be made soon.

According to the AMC statement the company believes the NLRB proceedings should be dismissed.

Christian Fellowship slates NADA affair

WASHINGTON.—The Fellowship of Christian Automobile Dealers will hold its seventh annual prayer breakfast during the NADA convention in Dallas.

The continental breakfast will be served at 8:30 a.m. Sunday, Feb. 5, in the Grand Ballroom of the Adolphus Hotel. Reservations may be made through Willard E. Cook Jr., Cook Ford Sales, Box 863, Sheridan, Wyoming 82801.

Additions on the inside

The 318i BMW for 1984, like the other '84 BMWs, is basically unchanged on the outside, but receives several interior alterations. The 318i has electronically controlled heating and air conditioning, greater rear-seat legroom and a new rear seat.

'84 BMW interiors refined while exteriors go unaltered

MONTVALE, N. J. — BMW's 1984 models are essentially unchanged on the outside but incorporate several interior refinements.

Changes include a new four-speed overdrive automatic transmission for all six-cylinder models, revised gearing and new options for the 318i and numerous detail improvements.

The '84 BMW line consists of five models. Four of them—318i, 528e, 533i and 733i—are sports sedans and the 633CSi is a limited-production sports coupe.

The 318i, introduced in May, 1983, as an '84 model, has a numerically higher final drive ratio and a revised fifth-gear ratio in its manual transmission.

Other 318i changes include new electronically controlled heating and air conditioning, greater rear-seat legroom and a new rear seat. A new option is the Luxus Touring Package, which includes cruise control, electric windows and an electric central looking system.

• The four larger models—528e, 533i, 633CSi and 733i—all powered by six-cylinder engines, also have detail improvements for '84. Most important of these is the new optional four-speed overdrive automatic transmission, which increases fuel economy while lowering engine noise, BMW said.

To reinforce the advantages of its overdrive fourth gear, the new ZF automatic transmission has a lockup clutch that eliminates power loss in the torque converter during fourth-gear operation.

The two '84 5-Series are powered by turbine smooth six-cylinder engines with computer-controlled electronic fuel injection and ignition.

The top-of-the-line 633CSi and 733i receive eight-way electric front seats and electrically adjustable head restraints as standard features.

BMW's 1984 prices range from $16,430 for the 318i to $40,705 for the 633CSi.

All BMWs are backed by a 3-year/36,000-mile limited warranty as well as a 6-year limited warranty against rust perforation.

Henry Ford II appointed

DETROIT.—In a corporate reorganization of Henry Ford Hospital, Henry Ford II has been named chairman of Henry Ford Health Care Corp., parent company of the hospital. The hospital was founded in 1915 by Henry Ford.

October tops 1982 by 15 pct.

Registrations climb for month, year

By Jenny L. King
Staff Writer

New-car registrations in the U.S. in October were up more than 20,000 units over September's total and were more than 100,000 above the corresponding month of 1982. Year-to-date figures climbed to a comfortable margin of 15.87 percent over the first 10 months of 1982.

According to figures compiled by R. L. Polk & Co., U.S. new-car registrations totaled 756,795 in October, up 2.94 percent from 735,167 in September and up 15.58 percent from 654,806 for October a year earlier.

Registrations for January through October, 1983, were up 15.87 percent from 1982, growing to 7,313,078 from 6,311,250. Domestic-car registrations were up 19.06 percent for the period, to 5,270,204 from 4,426,599.

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

Japanese export 329,705 cars during month

TOKYO. — Passenger-car exports from Japan totaled 329,705 in September, according to figures compiled by the Japan Automobile Manufacturers Assn.

Leading destinations were: U. S., 152,023; West Germany, 21,807; Canada, 18,268; Australia, 12,638; Malaysia, 12,201; Saudi Arabia, 11,348; Netherlands, 10,000; United Kingdom, 8,394; Puerto Rico, 7,776; Belgium, 7,128; Austria, 5,485; Switzerland, 5,428, and New Zealand, 5,082.

New-truck exports totaled 148,999. Leading destinations were: U. S., 45,324; Saudi Arabia, 14,289; Thailand, 8,925; Indonesia, 8,170; Australia, 8,089; South Africa, 6,871; West Germany, 4,069; Iran, 3,902; Canada, 3,808; United Kingdom, 2,442; Malaysia, 2,401; Pakistan, 2,216; Colombia, 2,178, and Egypt, 2,138.

Mercer expects 2 pct. domestic upturn to 187 million in 1984

Goodyear chief sees tire sales gain

AKRON. — The new-car buying spree expected to continue into 1984 should reverse a 10-year trend toward older cars on American roads and contribute to the best U. S. auto tire sales year since 1979, according to Robert E. Mercer, chairman and chief executive of Goodyear Tire & Rubber Co.

"U. S. auto makers are expected to produce about 7.3 million autos in 1984, after building a respectable 6.80 million in 1983, and this infusion of new blood to the U. S. auto fleet could reduce the average auto's age to about 7 years," he said.

The average age of U. S. autos in use steadily increased from 5.7 yrs. in '73 to 7.2 yrs. in '83.

"A slimmed-down tire industry will have to push its capacity in 1984 to meet the expected total demand for 187 million auto tires, including 4 million exports — the largest requirement for tires in five years," Mercer said.

"This would represent an increase of more than 2 percent above the 183.2 million auto tires sold in 1983," he said.

In 1984, demand for original equipment auto tires could increase 5 percent to approximately 47 million from 44.7 million in 1983, Mercer said.

In contrast, expected demand for replacement auto tire sales will remain relatively flat in 1984 at 136 million versus 135 million sold in 1983, he said.

It is expected that the replacement market, currently up to 70 percent radials, will remain a slow growth area as radialization continues to 75 percent in 1984 and tops out at 90 percent by 1990, he said.

Mercer said the truck manufacturing recovery has lagged behind autos, but now it is gathering steam, spurred by the 1982 Surface Transportation Assistance Act.

"With this piece of deregulation," he said, "we are seeing major fleet operators begin to make purchases of new equipment as they restructure their fleets, which will increase demand for truck tires, radial in particular."

An increase of 10 percent in total U. S. truck sales is expected in 1984 to 3.3 million, compared with 3.0 million trucks in 1983, he said.

Mercer said this will bring the market for original equipment truck tires in 1984 up to 5.7 million compared with 5.2 million in 1983.

In the truck tire replacement market, demand should increase slightly to 29.9 million tires from 29.6 million tires a year ago, he said.

Discussing tire imports, Mercer said that as long as the dollar remains strong, the U. S. will be a prime target for the imports. According to Department of Commerce figures, 22 percent of the radials sold in the U. S. replacement market in 1983 were imported.

"Of course, Goodyear also imports tires to counter the foreign competition," he said. "And we recently introduced a domestically made radial tire called the G Metric as an 'import fighter' for the growing U. S. import car replacement tire market."

Another phenomenon involving foreign competition that Mercer sees is what he called the "strange bedfellow" relationship developing whereby many major U. S. tire producers have entered into joint ventures with foreign tire makers.

He cited the sale by Firestone of its truck tire plant in Tennessee to Japan's Bridgestone which now is making Firestone brand tires.

Discussing Goodyear, Mercer said that the company's domestic and foreign operations shipped more tires in 1983 than in 1982, despite depressed economies in several parts of the world. Market share gains in several tire lines are responsible for this performance, he said.

The U. S. recovery is taking longer than expected to spread overseas, he said, and there will be only a few bright spots in the rest of the world economies during 1984.

"In the U. S., auto companies have introduced more high-performance cars to their 1984 model lines than in any time in the industry's history," Mercer said.

"A tribute to Goodyear's high-performance tire line is that Eagle radials will continue to improve their share of this market, he said.

Mercer said the outlook for 1984 capital expenditures by Goodyear is in the $700 million range, up from approximately $600 million in 1983.

Chevrolet welcomes Russell

Mel Melton Jr., right, Chevrolet's Houston zone manager, welcomes John Russell as owner of Russell-Frink Chevrolet, Inc., Cushing, Tex. Jim Frink, center, is a financial participant in the dealership.

Note: *Tempo/Topaz, despite being '84 models, are included for the period they were built during the '83 run. The same is true for Corvette. Some models built principally or solely in Canada are included to give an accurate picture of industry rates.

Product Safety Book covers recalls, defects since 1977

WASHINGTON. — Virtually every safety recall, potential defect or safety controversy involving motor vehicles since 1977 is included in The Product Safety Book, the Consumer Federation of America's (CFA) guide to possible defects in a full range of consumer goods.

Included in the book's 700 entries on 2,000 "potentially hazardous product models" is defect and recall information on more than 200 models.

Also included is defect information on various auto parts and products. For example, under "Automobile Transmissions" is information about the 21 million automatic transmissions involved in the Ford "Park-to-Reverse" controversy.

The motor vehicle information in The Product Safety Book was gleaned from NHTSA recall reports and car test reports from Consumers Union, according to Jack Gillis, a former NHTSA official.

Gillis was fired by former Administrator Ray Peck for continuing to edit The Car Book after the agency decided to drop it. He edited the text of The Product Safety Book written by CFA Executive Director Stephen Broback and CFA Product Safety Director Anne C. Averyt, and also wrote the text pertaining to motor vehicles.

Attending the press conference announcing the book were NHTSA Administrator Diane K. Steed, Consumer Product Safety Commission Chairman Nancy Harvey Steorts and FTC Commissioner Michael Pertschuk.

Calling the book "a tremendous effort," Steed congratulated CFA on its publication.

"This book furthers our common goal to increase the flow of information to car buyers to make them more safety-conscious," she said. "It greatly enhances our ability to get vital recall information to the public."

The Product Safety Book is available from the CFA, 314 14th St. NW, Washington, D.C. 20005, and in bookstores at $9.95.

Campbell adds deal

CENTRALIA, Wash. — Jim Campbell Jr., a Chevrolet dealer since 1961, has added a Chrysler-Dodge dealership. It is called Campbell Chrysler-Dodge.

Data compiled by Motor Vehicle Manufacturers Assn.

October tops 1982 by 15 pct.

New-car registrations climb for month and year

Continued from Page 6

bered 567,107 in October, up 7.32 percent over 528,420 the preceding month and up 21.96 percent over 464,985 for the same month of 1982.

Import registrations dropped slightly in number and substantially in share of the market from October to October. Imports were down 0.07 percent, to 189,688 from 189,821. Their market share for the month plunged to 25.06 percent from 28.99 percent.

U. S.-built Renault Alliances and Encores now are counted among the domestics by R. L. Polk & Co. and appear as such for 1983 and 1982 on current tables. A year ago, Polk considered the U. S. Renault products as captive imports and their numbers were detailed in import registrations. Thus, figures now in AUTOMOTIVE NEWS for late-1982 and the first eight months of 1983 will be changed from those published through the past year.

In October, American Motors, Ford Motor Co. and General Motors all improved their market positions as the imports dropped 3.93 percentage points, Chrysler Corp. lost 0.10 percentage points and miscellaneous domestics dropped 0.02 percentage points.

AMC was up 0.32 percentage points, to 2.05 percent from 1.73 percent; Ford gained 2.01 percentage points, climbing to 17.76 percent from 15.75 percent, and GM improved its share by 1.72 percentage points, to 46.48 percent from 44.76 percent.

In the domestics-only arena, AMC was up to 2.74 percent from 2.44 percent in October. Chrysler Corp. claimed 11.53 percent, down from 12.31 percent. Ford was up to 23.70 percent from 22.18 percent, GM dipped to 62.02 percent from 63.03 percent and miscellaneous domestics dropped to 0.01 percent from 0.04 percent.

U. S. intermediates claimed the largest market class segment in October, 28.89 percent. Imports were second with 25.06 percent, followed by compacts at 16.50 percent, standards at 12.18 percent, subcompacts at 11.23 percent and luxury models at 6.14 percent.

A year earlier, intermediates represented only 20.96 percent and imports had 28.99 percent. Compacts had 15.86 percent, standards had 12.78 percent, subcompacts had 15.08 percent and luxury cars had 6.33 percent.

In the domestics-only market this year, intermediates held a 38.55-percent share for 10 months, compacts had 22.02 percent, standards had 16.25 percent, subcompacts had 14.98 percent and luxury cars had 8.20 percent.

New-car registrations for the first 10 months of 1983 surpassed the same span of 1982 by 15.87 percent and edged past 1981 by 1.31 percent. Of the 1983 total of 7,313,078, domestics accounted for 5,270,204. Their sum was 19.06 percent higher than the 4,426,599 domestics registered the first 10 months of 1982, and 2.52 percent above the 5,140,488 from the same period of 1981.

In the 10 months of 1983, all four major U. S. auto makers increased their shares of the market at the expense of the imports and miscellaneous domestics. AMC was up 0.88 percentage points, Chrysler gained 0.76 percentage points, Ford was up 0.20 percentage points and GM advanced 0.12 percentage points.

Imports, whose numbers increased to 2,042,874 from 1,884,651, wound up with a smaller piece of a larger pie: 27.93 percent compared with 29.86 percent. Miscellaneous domestics dropped to 0.01 percent from 0.03 percent.

Soft 'T'

Am-Top, Inc., Troy, Mich., is introducing folding vinyl T-top panels for the 1982-1984 Camaro / Firebird. Retail price is $249.95.

obituaries

Cliff Bilby

CHICAGO.—Cliff Bilby, 64, former auto editor of Chicago Today and longtime auto editor of the old Chicago American, died Jan. 4. He was makeup editor of the Chicago Tribune at the time of his death.

Stan Gustafson

TOLEDO.—Stan Gustafson, 53, president of Dana Corp., died Dec. 26 at Houghton Lake, Mich., after a heart attack. Mr. Gustafson was elected president in December, 1980, after a career at Dana which began in 1958 as an internal auditor.

Robert L. Murray

PORTLAND, Ore.—Robert L. Murray, 61, owner of Murray Chevrolet Co. in suburban Gresham, died Dec. 17. He was current president of the Metro Portland Automobile Dealers Assn. and in 1980 and 1981 was head of the Oregon Automobile Dealers Assn.

Colman B. O'Shaughnessy

CLARENDON HILLS, Ill. — Colman B. O'Shaughnessy, 73, secretary emeritus of the Automotive Sales Council, a group he founded in 1958, died here Dec. 31. He was also the current manager of the Automotive Electrical Assn. Service Division of ASIA.

Charles S. Thompson

MELBOURNE, Fla.—Charles S. Thompson, former president of Sunrise Motors, Inc., St. Thomas, Virgin Islands, died here Nov. 29.

Total is 9,177,777; domestics, imports share gain

1983 car sales are best since '79

Continued from Page 1

1983, down from 61.07 percent a year earlier. Ford slipped to 23.12 percent from 23.38 percent. Chrysler was up to 12.39 percent from 12.02 percent. AMC improved to 2.85 percent from 1.95 percent; VW dropped to 1.25 percent from 1.58 percent, and Honda earned 0.74 percent of the 1983 market.

• AMC-make cars, VW and Imperial failed to match year-ago numbers. All other domestic makes were up. Chrysler sales improved by 47.92 percent, Plymouth was up 5.56 percent, Dodge was up 20.25 percent and Imperial (no longer built) was off by 55.67 percent.

Ford was up 14.57 percent, Mercury was up 25.1[illegible] percent and Lincoln was up 9.14 percent. Buick was up 16.88 percent, Cadillac was up 20.47 percent, Chevrolet was up 6.89 percent, Oldsmobile was up 26.01 percent and Pontiac was up 14.49 percent.

AMC was off 42.67 percent (its Spirit and Concord no longer being built), and VW was down 6.71 percent.

Fourth-quarter domestic sales added to 1,814,142, up 21.42 percent from 1,494,065 in 1982.

On the import scene, records were set by several makers in 1983. Nissan reported its best year ever in the U.S. Nissan sales of 521,902 were up 10.98 percent from 470,246 in 1982 and up from the previous record of 516,890 set in 1980.

BMW enjoyed record sales in 1983 and marked its 10th consecutive calendar year of sales increases. Jaguar had a record year as did Volvo, Subaru, Saab and Mercedes-Benz.

Volkswagen (import) was up from 1982. So were Toyota, Porsche, Audi, Mazda, Alfa Romeo, Isuzu and Peugeot.

In December, all the major domestic auto makers reported sales gains over 1982. GM was up 25.63 percent, Ford was up 26.10 percent, Chrysler was up 11.40 percent, AMC was up 18.76 percent, VW was up 3.45 percent.

GM sales accounted for 57.65 percent of the domestic market for the month, up from 57.30 percent in 1982. Ford climbed to 24.93 percent from 24.68 percent. Chrysler had 12.14 percent, down from 13.60 percent. AMC slipped to 2.92 percent from 3.07 percent. VW was down to 1.11 percent from 1.35 percent and Honda had 1.25 percent.

Imports captured 25.64 percent of the December market, down from 29.09 percent in 1982.

Late-December domestic sales totaled 206,610, best for the period since 1978 and up 30.38 percent from 158,466 in 1982.

Harvester, GAC join to develop special vehicles

CHICAGO.—International Harvester and General Automotive Corp., Ann Arbor, Mich., have announced an agreement of cooperation for the development of special-purpose vehicles.

Neil A. Springer, president, International Truck Group, said "the agreement will enable us to fill market niches and to strengthen our already strong market share position." International manufactures medium and heavy trucks.

Cruse W. Moss, GAC chairman, said "the recognized expertise that we bring to this arrangement will benefit both companies in the pursuit of government and specialty-vehicle business."

GAC manufactures the Flxble transit bus and other vehicles and equipment for the transportation industry and provides contract services through subsidiary groups.

Oklahoma dealers choose officers

OKLAHOMA CITY.—Ed Perry, a Ford dealer in Holdenville, has been elected president of the Oklahoma Automobile Dealers Assn., and Ed Eskridge, of Eskridge Oldsmobile-Honda, has been elected president of the Oklahoma City Motor Car Dealers Assn.

As head of the state group, Perry succeeds Jack Marshall, a Chevrolet dealer in Claremore. Other new officers are Wendell Dockum, Oklahoma City Pontiac dealer, president elect, and Ralph L. Bolen, Bolen Oldsmobile, Oklahoma City, treasurer.

Perry succeeds Roy Dockum, Dockum Pontiac, as president of the Oklahoma City association. Ted Gunderson, Southwest Ford, was named vice president, and W. W. (Red) Ridler, Toyota of Oklahoma City, was elected treasurer. John Connor is manager of both associations.

United Technologies unit appoints two new VPs

DEARBORN. — Frank E. Arcobello and Carlo Damiano have been appointed vice presidents for United Technologies Automotive Group's European Operations, located in Lausanne, Switzerland.

Arcobello becomes vice president-finance and Damiano vice president-personnel and industrial relations.

U. S. makers top 1982 by 37 pct.

6,821,066 cars assembled in 1983

By Mary Beth Mayer
Staff Writer

All of the domestic auto makers enjoyed production increases last year and together they wound up the 1983 calendar year with the highest output in four years.

The manufacturers assembled 6,821,066 cars, leading the year-ago total of 4,973,870 by 37.14 percent. It was the best 12-month showing since 1979, when 8,418,369 were completed.

American Motors experienced the largest increase in production last year, building 200,381 units, up 82.91 percent from 109,522 in 1982. Renault Alliance and Encore were the reason.

Chrysler Corp.'s output was up 50.58 percent, from 600,502 to 904,189. Total car production by Ford Motor Co. was 1,546,493, which was 40.08 percent ahead of 1,104,074 in 1982.

General Motors assembled 4,016,461 cars last year, up 30.71 percent from 3,072,883. Volkswagen of America finished with 98,207 units, a 16.58 percent increase over 84,246 in the previous year.

After producing 620 units in the last two months of 1982, Honda finished its first full year of production in the U. S. with 55,335 cars. Checker Motors ceased production in 1982.

Totals for December and the fourth quarter were the highest since 1978. December's build was 580,850 units, 51.30 percent ahead of the year-ago month's 383,921 and the highest for the month since 637,336 units were completed five years earlier.

Breakdown for the month by company was: GM, 57.36 percent; Ford, 21.26 percent; Chrysler, 15.15 percent; AMC, 3.30 percent; VW, 1.59 percent, and Honda, 1.34 percent.

Last week's output of 136,310 units dropped 11.83 percent below 154,589 completed during the week ending Dec. 24, but was 80.96 percent ahead of the 75,328 units built in the first week of 1983.

Honda's non-union employes were the only U. S. car assemblers working during the last week of December. They built 1,483 units during four days of production that week.

The other car makers returned to work Jan. 3 after the holiday vacation, except for the American Motors Kenosha (Wis.) plant, which will return Jan. 9.

Last week, nine GM points worked two shifts on Saturday (Jan. 7). They were: Arlington (Tex.), Detroit, Doraville (Ga.), Fairfax (Kans.), Flint (B-D and G lines), Lansing (B-D and G lines), Leeds (Mo.), Lordstown (O.) and Van Nuys (Calif.).

GM's Willow Run (Mich.) plant will close today (Jan. 9) for one week of plant rearrangement. Some 4,500 workers are affected.

All five of Chrysler's car facilities worked extra hours last week. Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 put in two 9-hour daily shifts. Jefferson (Detroit) worked two 8½-hour daily shifts and St. Louis No. 2 operated one 10-hour daily shift. St. Louis No. 1 and No. 2 and Jefferson worked last Saturday.

This week, Chrysler plans the same daily overtime schedule.

Five Ford facilities worked extra hours last week. Atlanta, Edison (N. J.), St. Louis, Wayne (Mich.) and Wixom (Mich.) put in extra daily hours and Wixom worked Saturday as well.

This week, three Ford points are down, while daily overtime is planned at five other plants, in an effort to rebalance product mix. Down are Dearborn, Kansas City and Lorain (O.). Some 2,400 workers at each point are affected. On overtime are Chicago, Edison, St. Louis, Wayne and Wixom.

Auto production in Canada shows 20 pct. gain for 1983

In 1983, Canadian auto and truck makers built about 20 percent more vehicles than in the previous year.

The car manufacturers turned out 968,298 units last year, 20.79 percent ahead of 801,685 in 1982. It was the best annual total since 1978, when 1,131,050 cars were completed in Canada.

The truck makers finished 1983 with 554,550 units, an 18.42 percent improvement over 468,327 in the previous year, and just 1,279 units shy of the 1981 sum of 555,829.

In December, the auto makers completed 78,459 units, leading the year-ago month's 50,088 by 56.65 percent. It was the highest total for December since 1978, when 85,377 units were assembled.

December truck output was 52,744, nearly doubling the year-ago total of 27,043. It was the best month ever for truck production in Canada.

As the assembly plants returned from holiday vacations last week and worked four days, auto output was targeted at 18,231 units, trailing the 23,209 units built in the week ending Dec. 24 by 21.45 percent, but 26.64 percent ahead of the 14,396 assembled in the year-ago week.

Ford Motor Co.'s Oakville (Ont.) car point will be down this week to complete tooling and modifications which are necessary to add production of Escort and Lynx to Tempo and Topaz output there.

Tooling for the new lines at Oakville came from San Jose, Calif.

Truck production last week was estimated at 12,292 down 13.81 percent from 14,260 units assembled in the week ending Dec. 24, but 83.82 percent ahead of the 6,687 units built in the year-ago week.

Chrysler Corp. estimated that 1,105 Plymouth Voyagers and 1,175 Dodge Caravans were built at the Windsor assembly facility last week. In 1983, there were 9,109 Voyagers, 8,920 Caravans and 103 Mini Ram Vans assembled, for a total of 18,132 T-115s for the year.

'83 truck output jumps 27 pct.; total is 2,421,495

During 1983, domestic truck makers produced 27.31 percent more units than in the previous year.

The manufacturers wound up the year with 2,421,495 units, a substantial increase over the 1,902,164 built in 1982. It was the best year of truck production since 1979, when 2,973,498 were completed.

In December, truck manufacturers finished 207,537 units, the best showing for the month since 1978, when 276,248 were built and 60.95 percent ahead of the year-ago month's 128,948.

The truck makers were off to a far stronger start in the first week of the new year than in the first week of 1983. Last week, 47,626 trucks were completed, leading the year-ago week's 19,824 by 140.25 percent. The week's total trailed the 56,687 units built during the week ending Dec. 24 by 15.99 percent.

All domestic truck makers returned to work Jan. 3 after the holiday vacation.

2 car groups formed, divisions lose clout, marketing unchanged

GM reorganizes for greater efficiency

By John K. Teahen Jr.
Managing Editor

General Motors' broad-scale reorganization program is designed to bring greater efficiency in engineering, manufacturing and product development.

In boardroom parlance, greater efficiency means lower costs and lower costs mean higher profits.

Chairman Roger B. Smith and President F. James McDonald answered questions about the program at a news conference last week.

Smith expects the new look to help GM give its customers "higher quality, greater product diversity and more value than ever before."

Outwardly, buyers of GM cars won't be much affected by the program since marketing is not involved.

GM's 10,000 new-car dealers won't find any great changes. They'll continue to handle the same lines of autos — big and small — as they are currently stocking, at least for now.

The new setup establishes what GM called "two integrated car groups which will function as self-contained business units."

GM said each will be totally responsible for its product, including engineering, manufacturing, assembly and marketing, and each will be accountable for its quality, performance and profitability.

The two groups are the Chevrolet-Pontiac-GM of Canada Group and the Buick-Cadillac-Oldsmobile Group.

The Chevrolet - Pontiac - Canada Group will be involved with small cars — "strengthen GM's commitment to small cars" as the corporation phrased it. It will be responsible for the new Saturn small-car program and for the GM-Toyota project.

Related stories on Page 3.

The Buick-Cadillac-Oldsmobile Group will be involved with what GM called "regular and large-size cars."

• Inevitably, they are known as the small-car group and the big-car group, but Smith and McDonald studiously avoided that terminology.

In any matter involving the structure of GM, the question of centralization vs. decentralization arises.

These moves fall definitely on the side of centralization. The car divisions are losing power. The central corporate structure is gaining power.

A. A. Cunningham

Lloyd E. Reuss

Robert C. Stempel

Charles Katko

The new structure for car operations is patterned after the GM Worldwide Truck and Bus Group, which was formed in 1981, and the new role of the car divisions is similar to that at Ford Motor Co. and Chrysler Corp.

At Ford and Chrysler, the car divisions are marketing arms. That is the situation at GM under the reorganization.

Announcement of the new program brought enough personnel changes to delight any GM watcher, especially those who solemnly predict (often er-

New Merkur, Taurus caught on film

Ford Motor will round out its product line during the next two years with introduction of the Merkur XR4Ti (known as the Sierra in Europe, where it is built), above, and the new front-drive "Taurus" models (photo shows a "mule" built on a Chevy Celebrity), which replace Ford LTD and Mercury Marquis. The rear-drive XR4Ti bows this fall as a Mercury with standard 2.3-liter turbocharged engine and five - speed transmission. The six - passenger Taurus cars—they will not be called LTD and Marquis—debut in the fall of '85 as '86 models with standard 2.5-liter HSC four-cylinder engine (or optional 3.0-liter V-6) and choice of five-speed manual or four-speed automatic overdrive transaxles. Wheelbase is 106 inches.

Chrysler sues to stop GM-Toyota venture

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Chrysler Corp. said it hopes its suit to stop the General Motors-Toyota proposed joint venture will be settled before GM-Toyota can get the joint-venture vehicle into production for the 1985 model year.

Chrysler said its chances of winning the suit are "excellent."

The suit was filed last week in a U. S. District court here, seeking a permanent injunction against the joint venture. Chrysler lawyers charged that the GM-Toyota agreement is in violation of U. S. antitrust law.

Richard Goodyear, Chrysler vice president and general counsel, said Chrysler's case is "absolutely dead square in the center of American antitrust law" and that it would take "more than a couple of FTC commissioners" to change that law.

But a GM spokesman said, "Chrysler can do whatever it wants to, including filing a suit to eliminate 12,000 jobs and pre-

Year opens with 1,357,995 units; 61-day supply

New-car stockpile pushes upward

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers built up their new-car inventories during December, despite the holiday shutdowns, and opened 1984 with a 61-day supply.

Although the inventory rule of thumb holds that 60 days is the optimum — and 61 days is very close to that optimum — the Jan. 1 inventory was still marked by shortages in a number of hot-selling lines and by a handful of overstocked nameplates.

The Jan. 1 inventory totaled 1,357,995 units, a 61-day supply at the current selling rate, compared with 1,307,756 on Dec. 1, which was a 55-day supply.

A year earlier, the Jan. 1 domestic new-car inventory totaled 1,125,989, a 65-day supply at the lower selling rate then besetting the industry.

In general, standard and luxury nameplates were in shortest supply as the year began, although the leanest of all continued to be Pontiac's sizzler, the Fiero.

All of the corporate makers increased their stockpiles during December in terms of unit counts, but days-supply figures declined slightly for Chrysler Corp. and U. S.-built Honda.

GM opened January with a 57-day supply, up from 50 days a month earlier. GM beefed up some of its bigger-volume lines which had been on the lean side, particularly among its standard models.

Table on Page 53.

Ford Motor Co. had a 66-day supply Jan. 1, up slightly from 65 days a month earlier. Like GM, Ford was shortest in its big-car lines.

Chrysler Corp. boosted its unit total, but opened January

breaking news

New GM C-cars due April 5

DETROIT.—General Motors' new front-drive '85 C-cars—the Cadillac DeVille, Buick Electra and Oldsmobile 98—are tentatively slated for public introduction April 5. Timing on intro of the new lines has been delayed more than once, but now appears fairly firm.

Nissan schedules overtime at Smyrna

SMYRNA, Tenn.—Nissan Motor Mfg. Co. has scheduled overtime at its truck plant here. Beginning today (Jan. 16), the facility will work nine-hour days for three months. It will also work Saturdays on Jan. 28, Feb. 18 and March 3. In addition, the entire Smyrna operation will close for vacation the last week of July and the first week of August. NMMC plans to begin building 10,000 trucks a month beginning in May.

S. Korea challenges Japan in Canada with Hyundai Pony

By Kathleen Hamilton
Financial Editor

WINDSOR, Ont. — A South Korean auto maker jumped into the North American market last week with 50 Canadian dealers, 2,500 subcompacts, a healthy ad budget, a slot at the Montreal auto show and the ambitious goals of usurping the Japanese in Canada's small-car segment, then moving into the U. S.

Hyundai Auto Canada, Inc., has set itself a hectic schedule.

Another 7 to 10 dealers will be added in the Maritime Provinces in March; two more sales and service headquarters are to join the Toronto headquarters within a year; first-year sales of 5,000 Ponys could jump to a total of 20,000 within two or three years with the addition of the larger Stellar model. A Pony pickup and a two-seat sports car could eventually be added.

There's more: A 1.6-liter or 2.0-liter engine is scheduled to join the standard 1.4-liter powerplant in the Pony this year. And when the new plant in the Republic of Korea is completed in 1985, capacity will rise from 100,000 a year to 300,000 — enough to take the plunge into the giant U. S. market in the 1986 model year.

Goals for the U. S. haven't been set yet, Hyundai Auto Canada President Sung Hak Park said, but the company is hoping for 150 Canadian dealers eventually.

The new Korean assembly plant will be producing an all-new, front-drive Pony.

The rear-drive Pony that has been sent to test the North American market can hardly be described as high-tech: The choke is manual and the engine carbureted. Electronics haven't taken over the ignition. Spark plugs fire the engine.

In fact, most of the mechanicals date back to 1974, when the car was introduced, although Hyundai Motor Co. has been getting help in updating the Pony from Japanese partner Mitsubishi, which owns a 10-percent stake in the Korean auto maker.

• The body was updated 18 months ago by ItalDesign, so the Pony's lines are modern. An examination of the car at a preshow introduction by Downtown Motor Sales (Windsor) showed body panels were well gapped in most instances, doors and lids fit snugly and closed solidly and windows opened and closed easily.

The Pony's interior is overwhelmingly plastic: Vinyl seats; molded instrument panel and door panels; latches, buttons and handles — all plastic. But the panels fit well, the edges were finished smoothly and the upholstery fit well.

While the Pony could by no means be considered plush, it was surprisingly far from the starkness of, say, a low-line European Fiat or one of Canada's price leaders, the Soviet-built Lada. The Pony's cargo compartment is hidden from view, and the rear seat folds down for added cargo space.

A short test drive found the car responsive. Front suspension is independent strut with coil spring; rear, leaf springs. The ride was firm and the car was surprisingly well insulated from street noise.

The five-speed gearbox in the GL tested was firm and smooth; the clutch had a short pedal distance. It was maneuverable (its turning radius is less than 15 feet) and offered more than adequate acceleration. Body panels and paint were also up to snuff, perhaps not surprising in light of the parent company's specialization in steel and steel products.

The Pony may not have the Japanese quality level yet, but its quality was far above what had been expected for $5,795 to $6,695 (Canadian). And it surely gave no signs of being a Third World Car, although Hyundai is exempted from the usual Canadian-car duty because Korea is classed as a developing nation.

Not surprisingly, Hyundai is expecting its largest market from the 18-to-35-year-old age group, with 40 percent women buyers, according to John Wright, vice president of sales and marketing.

Oddly enough, the Pony's old technology may be a selling point with these budget-minded buyers who may be enticed by the repair-it-yourself capability of the car, according to Wright.

In any case, Hyundai is willing to spend several million dollars in advertising its new model, according to Park.

• The agency is Stariton and Pearson and Martin, Toronto, chosen because several of its creative directors had worked on Honda's launch into Canada, according to John Kim, Hyundai Auto Canada manager of sales and marketing.

Advertising initially is being placed in news and general interest magazines, women's magazines, car-enthusiast press and major newspapers. In addition, Hyundai's co-op program will match dealer advertising up to $25 a car, Wright said.

Downtown Motor Sales (Windsor), like 80 percent of Hyundai's dealerships, will have a separate showroom for the Korean line. Edward Klein, who owns Downtown Motors with Lou Gardner, said the three-car showroom across the street from his Jaguar-Subaru store will be complete in two months.

Typically, dealers are investing $15,000 to $20,000 (Canadian) signs, parts and equipment, Wright said. Service technicians are sent to seminars in major cities. Next to be added to the dealer network will be dealers in medium-sized cities, Kim said.

Hyundai has $1.5 million worth of parts in its Toronto-area warehouse, he said. Within a year, regional offices and

Updated Hyundai

The Pony's body was updated a year and a half ago by ItalDesign to make it more pleasing to the eyes of its intended market: 18 to 35 year olds. Wheelbase is 92 inches, overall length is 165 inches. Curb weight of the base model is 2,149 pounds.

Court denies GM bid to kill X-body lawsuit

WASHINGTON.—Motions for summary judgment in the Government's X-body suit against General Motors have been denied by a U. S. District Court here.

The court said it could not issue an opinion that would be undisputed, based on the motions and evidence filed by both GM and the Department of Transportation.

Accordingly, oral arguments for summary judgment were canceled and the Government and GM were summoned to meet with a District Court judge to arrange a timetable for further action in the case.

The court said DOT's motion for a preliminary injunction will be heard on Feb. 1. That motion would force GM into notifying X-car purchasers of the Government's lawsuit and of possible braking problems with X-body vehicles.

The injunction also calls for a GM escrow fund of $50 million to be set aside for GM to reimburse consumers who have repairs made on X-cars that relate to the Government's recall request.

DOT filed its case against GM in August to force the auto maker into recalling 1.1 million X-cars, which allegedly suffered from brake lockup.

DOT has also asked for $4 million in civil penalties, claiming GM lied to the Government about the brake-lock problem and initiated two recalls knowing they were inadequate.

How to obtain information on tire-tax refund

An article in the Jan. 9 issue of AUTOMOTIVE NEWS advised dealers who wanted more information about tax refunds on floor stocks of new tires to contact Neil W. Zyskind, of the Internal Revenue Service.

Zyskind says interested persons should call him only if they have already read the IRS regulations governing the tax refunds and still have specific questions.

He advises them to call their accountants and ask for explanations or copies of the regulations, which were published Dec. 23, 1983, in the Federal Register.

Ford to build Mazdas in Mexico for U.S. sale

MEXICO CITY.—Ford Motor is going to build a Toyo Kogyo-designed car in Mexico predominantly for export to the U. S. and Canada.

Ford said last week it will invest $500 million for an assembly plant in Hermosillo, some 170 miles south of Nogales, Ariz.

The plant will eventually turn out 100,000 cars a year.

Although Ford has a 25-percent stake in Toyo Kogyo, it will have sole ownership of the Mexican plant. The first cars from Mexico apparently will arrive in the U. S. market sometime in 1986 and will fit in the subcompact segment.

Ford now assembles Toyo Kogyo models in Australia under the Ford names of Telstar and Laser. Basically, they are the Mazda 626 and GLC.

Under a Mexican decree of last September, each auto maker in Mexico is limited to producing two car lines in 1985 and 1986 and just one in 1987. After 1987, additional lines would be allowed if the models can be exported.

The decree was intended to increase local content of vehicles in Mexico, but it has since depressed the Mexican market and caused difficulties for the producers.

Currently, there are only six car manufacturers in Mexico: Ford, General Motors, Chrysler Corp., Nissan, Renault - American Motors and Volkswagen.

In some quarters, Ford's move was viewed as an attempt to answer the recent GM - Toyota joint venture to build small cars in California.

In Detroit, UAW Vice President Stephen P. Yokich said Ford's Mexican operation "will cost as many as 25,000 U. S. and Canadian jobs."

Said Yokich, "Clearly, an investment of this magnitude is a direct threat to our members' job security, and we will address it as such when we commence negotiations with Ford Motor this summer."

Index is up 12.8 percent over year ago

Service business rebounds in U. S.

By Francis J. Gawronski
Service Editor

After a dip in the growth rate in October, service and parts business recorded by new-car dealerships bounced back in November to record the fifth best showing of the year, according to the Automotive News Service Index.

As measured by the Service Index, November shop volume amounted to 112.8 percent of the business for the same month in 1982. In October, service and parts business dipped to 111.6 percent of the year-earlier volume after posting an increase of 15.3 percent in September.

November marked the ninth consecutive month in which shop volume registered an increase over the year-earlier month.

As in the previous six months, all indicators used in the Service Index were on the upside in November, led by sales of all parts and accessories with an increase of 15.4 percent over the volume recorded in the same month in 1982.

Shop parts sales, those used on both customer-paid and warranty work, were up 13.2 percent over 1982 volume, while total labor sales (customer-paid and warranty) topped the year-earlier volume by 12.1 percent.

SERVICE INDEX
112.8*

	Nov., '83 vs. Nov., '82	11 mos., '83 vs. 11 mos., '82
Gross Profit on All Labor and P&A Sales	+10.7%	+ 8.5%
Repair Orders Written	+10.9%	+ 3.4%
Total Labor Sales (Customer & Warranty)	+12.1%	+ 8.8%
Shop Parts Sales (Customer & Warranty)	+13.2%	+10.8%
Sales of All Parts and P&A	+15.4%	+11.9%

*—Survey by Automotive News shows that dealers' service and parts business in Nov., 1983, was 112.8 percent of business in Nov., 1982. Service business in the 11 months of 1983 was 109.6 percent of business in the corresponding period in 1982.

Gross profit on all labor, parts and accessories sales—the most important barometer from the dealer's viewpoint—topped the previous year's figure by 10.7 percent, while repair orders written in dealership service departments increased 10.9 percent over the number written in 1982.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

For the 11-month period of 1983, service and parts business was 109.6 percent of the volume attained for the same period a year earlier.

Sales of all parts and accessories showed an increase of 11.9 percent for the period, while gross profit was up 11.1 percent and shop parts sales escalated 10.8 percent over the volume recorded in 1982.

Labor sales increased 8.8 percent for the January-November period, while repair orders written were up 3.4 percent.

Reuss, Stempel in front for 1987, but don't overlook Cunningham

GM sets up race for presidency

By John K. Teahen Jr.
Managing Editor

Like a successful gambler, General Motors encourages competition and it's not above hedging its bets.

The corporation may have done that last week — especially the hedging — as it chose the men who will lead its restructured passenger-car operation in North America.

GM has marked two men as prime contenders for the presidency. The present occupant of that office, F. James McDonald, will observe his 65th birthday Aug. 3, 1987.

The two frontrunners, as of today, are Lloyd E. Reuss, 47, and Robert C. Stempel, 50. Last week, they were placed in charge of the newly formed passenger-car groups. Reuss heads the Chevrolet-Pontiac-GM Canada Group, and Stempel has the Buick-Cadillac-Oldsmobile Group.

Now for the hedging: GM also promoted Alexander A. Cunningham to executive vice president in charge of North American Passenger Car Operations. Cunningham is 58, about 3½ years younger than McDonald.

If neither Stempel nor Reuss is deemed ready for the presidency in 1987, Cunningham could be a 3½-year alternative.

And three more contenders gained prominence last week as well. They are Donald E. Hackworth, 46; John O. Grettenberger, 46, and John F. Smith Jr., 45, whose name has a familiar ring at GM.

Hackworth was named Buick general manager; Grettenberger became Cadillac general manager, and Smith was appointed president and general manager of GM of Canada. Grettenberger and Smith were elected GM vice presidents. Hackworth already was a VP.

There are other prospects. The roster of GM group executives includes men who could move to the top if the corporation's rulers so decree. And general managers William E. Hoglund, 49, of Pontiac, and Joseph J. Sanchez, 53, of Oldsmobile, cannot be ignored.

So there's no shortage of candidates for the GM presidency in 1987. While Stempel and Reuss top the list, a bet on who will be chosen is not as safe as betting that Jan. 22 will fall on a Sunday this year.

And there is another option. Vice Chairman Howard H. Kehrl will be 65 on Feb. 2, 1988. There could be room for both Stempel and Reuss in GM's troika.

There's an interesting similarity among all the men (except Cunningham) mentioned heretofore: Their age. They are all close enough so that 1987 may be their only shot at the GM presidency. Thus GM has not set up a continuing order of ascendancy.

For example, if Reuss should be chosen and serve until he is 65, none of the others could succeed him. If Stempel were selected, a couple of his contemporaries might be able to follow him, but by then GM should have an entire new crop of first-echelon hopefuls.

As for the job of chairman, that belongs to Roger B. Smith until the end of July, 1990 (assuming continued good health). Barring a major and totally unexpected foulup, his successor is due to be F. Alan Smith, cur-

Star of Ford's Detroit show exhibit

A vehicle which Ford says is "quite representative" of the production Ford compact Aerostar passenger wagon and commercial van made its debut at the Detroit Auto Show, which opened Saturday (Jan. 14). The streamlined Aerostar, which goes into production late this year, will seat seven adults and offer almost 140 cubic feet of cargo space with rear bench seats removed.

Reaction to restructuring is mild

GM dealers, suppliers stay calm

By Roger Rowand
Engineering Editor

DETROIT.—Reaction to General Motors' revamping structure of its car divisions and GM of Canada was mixed but unexcited among members of its dealer body and army of supplying companies.

There was no real worry detected among suppliers. Across the country, dealers, too, reacted calmly.

William L. Crawford Jr., at Champion Chevrolet Co., Manhattan Beach, Calif., was very nearly laconic about the GM reorganization.

"I know only what I read in the newspaper, and the Chevrolet general sales manager, Bob Cook, sent us a message on our communication system. Other than that, I know nothing," he said.

"I don't know of any dealers expressing any anxiety about it. In terms of the trade, it's too new to rate. The corporation moves in such a ponderous fashion it could be three or four years before we see any change. It's kind of like turning a supertanker around.

"There's been no consternation at the wholesale level, at least not manifest here in Los Angeles. It's very calm," Crawford said.

At Chevy Chase Chevyland in Chevy Chase, Md., adjacent to Washington, Dealer Frederick H. Bowis also was calm. He said he will applaud the moves if, as has been promised, there are no big changes coming in GM's dealer relations.

"I think the interrelationship between manufacturing and the selling organization is one of the keys in achieving some sort of supremacy in automobile sales," Bowis said.

• He said he was disturbed when early reports said Chevy dealers would be selling only small cars, particularly because his town is an up-scale one with heavy buying of foreign cars and large U. S. cars.

He said he is a little disturbed now because Chevy will have to share Robert Stempel, group executive in charge of the newly established Buick-Cadillac-Oldsmobile Group.

"Reuss (Lloyd Reuss, group executive in charge of the new Chevrolet-Pontiac-GM of Canada Group), is a superior manager, too, there's no question about that. But they've taken a full-time man and gotten a half-time man. I'm not really happy about that," Bowis said.

"I sympathize with their need to reduce their marketing overhead but I'm not sure they're not going too far to do that," he said.

He added: "I applaud getting the distinctive differences between the cars. I can understand the reason for marketing one of the alphabet soup cars through Chevrolet and a different-lettered car through the Buick and Olds organization."

In McLean, Va., across the Potomac, the NADA said it supports the goals of the GM car division reorganization. Those are higher quality, greater product diversity and more value for consumers.

"While this reorganization of the five GM divisions is an internal corporate matter, it is reassuring to note GM officials stated in their announcement that their dealer body was one of the corporation's greatest assets and the change will not affect GM's relationships with its dealers," the trade group said.

"Dealers are hopeful this move by GM will preserve and enhance the value of the five individual franchises.

"Dealers are also optimistic this new organizational approach will give GM an opportunity to provide better product differentiation among the divisions and a clearer picture of

Continued on Page 56, Col. 1

Marketing is unaffected by GM reorganization

By Joseph Bohn
Marketing Editor

Speculation that General Motors' reorganization would have its major impact on marketing proved groundless.

The car divisions will still be able to market the mix of small and large cars they want, built to their specifications by one or the other of two car groups which were established, executives pointed out.

Asked how the change might affect fleet and leasing, GM President F. James McDonald said: "I don't see any affect at all.

"One thing we didn't want to do is change our interface with the marketplace (and) our dealer body. If you look at the car divisions, they're exactly the same as they were and (so is) the interface with the dealer."

Neither McDonald nor GM Chairman Roger B. Smith saw any effect on advertising.

Smith said, "In advertising, you're going to need just what you have now because each of those five car divisions is going to retain its current" status.

McDonald added that the newly formed car groups won't do any advertising.

• "I don't see the group having any advertising," he said. "The (car division) nameplates are so important, we have a lot of money invested in those nameplates. I look at all the advertising, except for some corporate, to be aimed at those nameplates."

Citing the "very little" corporate advertising, such as institutional and safety ads, handled by D'Arcy MacManus & Masius and N. W. Ayer, McDonald added: "I don't see that affected."

None of what GM is doing will either "prohibit" or "augment" divisions having the same or separate cars, executives continued.

"Individuality in certain divisions is very important," Smith said. "If you want to pick Corvette for Chevrolet, I can't picture Chevrolet without a Corvette."

Similarly, cars like the Buick Riviera convertible and Cadillac Seville are integral parts of those marketing divisions.

Ultimately, "the market has to tell us what they (individual divisions) can support," a long-term trend unrelated to the specifics of the company's reorganization, Smith noted.

"If they (car divisions) want a lot of things that are not on the shelf, they're going to pay for it in some way. They must figure out if they can sell competitively and still make money" in planning their future product mixes, he concluded.

Vendors eye GM reorganization

Little change seen in purchasing

By Roger Rowand
Engineering Editor

DETROIT.—No one has more at stake as the General Motors reorganization cards are dealt than its suppliers. And, as the cards fall in the months ahead, apprehension will have a hand in the game.

Initially, two reactions were prevalent here as vendors eyed the changes.

One: There will be far fewer areas of interface between suppliers and the auto giant. Therefore, they'll have less input into the company.

Two: A transition period has been entered and the vending picture will be out of focus for months as the reorganization shakes down.

Talks with GM executives give some insight into the supplier situation. They lead to the conclusion only the second reaction is valid.

"I don't anticipate any major change in the way purchasing contracts are sought or granted," said one GM official.

"The guys who got those new jobs are setting out right now with their transition teams to plan how we're going to take these steps. No one can forecast what's going to happen. But, I suspect we'll still see common materials purchased by GM purchasing. We'll still see divisional-specific material, parts and components purchased by division purchasing people," he said.

"I don't know how long that will continue. But, at the same time, I don't know if it will ever change. No one can tell you today, or this month, the kind of changes they expect to happen," he said.

• What makes the GM reorganization unusual is the immensity of the organization that is going to be changed. No one inside the company is making any estimate as to how many people will be involved or even how long it will take.

"This is a big undertaking," the GM official said. "It's going to take a lot of care and thought to get us from where we are today to where we want to be eventually. We might make some false starts. It's not going to be easy with a company this big."

At this point, no one is predicting a major change in purchasing. If a supplier today deals with five divisions, that will continue.

"In 1988 he's still going to be dealing with five divisions. His key contacts will not change," said a GM official.

"If he's dealing with central purchasing today — with our purchasing staff — he'll still be dealing with them. I don't foresee that changing because we're

A sinking ship with holes in all the lifeboats?

Auto market looks grim in Chile

By Vicki Carpenter
Special Correspondent

SANTIAGO, Chile. — Recent announcements concerning the government's next five-year plan have specifically referred to the auto industry.

In general, there has been an about-face from the indiscriminate free-marketry that devastated large portions of local industry in 1981.

Motorized vehicles, unlike certain staples, are considered luxuries and have been placed in a category of heavily taxed items that also includes fine rugs and tapestries, furs, liquor and electronic equipment.

The tax increase on car sales will be 8 percent on passenger vehicles of engine size less than 850 cc and 30 percent on vehicles with larger engines. The tax will affect both nationally produced and imported vehicles (based on the final importation cost).

In addition, a heavy tax has been set on all automobiles imported at values exceeding $12,000. Needless to say, few in the industry are thrilled.

Profoundly preoccupied by the new taxes was the manager of the Automobile Salesmens' Chamber, Jose Manuel Matte, who declared to local media his visions of impending doom.

Consequences will be grave in the importation and commercialization business due to the already depressed situation of the Chilean auto industry, he declared. Matte said he does not believe the measures will prove to be a significant source of additional income for the state.

• To understand the politics of the Chilean Government, it is convenient to imagine a sinking ship in which all the lifeboats have been found to contain holes. At this point anything is worth a try.

Apart from increasing confrontation with its citizenry, the military junta continues to face some basic economic snares in the form of 30 percent unemployment, a $19 billion foreign debt (which some in economic circles are calling unpayable), 23.7 percent inflation and a constantly fluctuating dollar, mostly upward.

As has happened in other Latin American countries, the Chilean economy was crippled over recent years after a several-year boom of cheap credit and an unrealistically low dollar led to a tidal wave of free-flowing imports.

Local products never stood a chance against a 30-peso dollar —now valued at 86-87 pesos and as much as 105 on the black market. (This rate reached an excruciating high of 150 pesos last March preceding talk of another devaluation.)

Hence, anything that may foster optimism in any particular element of some industry is tossed out like a harried life preserver and without further consultation with the victims.

The surprise factor is just not going to help overcome current difficulties, said John Cunhill, Renault general manager, shortly after news of the tax increase became public. It is impossible to plan anything under these conditions, he said.

• The increase in automobile prices has already led to cancellation of some orders by customers. As price increases hit the consumer rather directly, the market is contracting further.

Matte estimated that the Datsun Pulsar, now selling at 579,000 pesos ($5,019), will rise in price to about 1,015,000 pesos ($8,799). Taxes could eventually cause a sales decline of as much as 12,000 units, said Matte.

According to Central Bank statistics, the number of imported vehicles fell from a record high of 26,800 in June, 1981, to only 398 in October.

Local production, which belongs to General Motors, Peugeot and Renault, shrunk by 60 percent in a year's time from 8,992 units during the first 10 months of 1982 to 3,564 units during the same period in 1983. Fiat and Citroen, once also set up locally, were forced to close early in the year.

Sales outlets are expected to continue closing in view of current economic policies. Of 800 establishments existing in 1981, only 200 were still viable in 1983.

In addition to the 20 percent sales tax increase for larger-engine cars, those vehicles imported at a value exceeding $12,000 will be taxed 100 percent of the excess amount. This disincentive toward the purchase of large luxury cars has not displeased everyone.

Said Andres Allende, president of Automotriz Arica: "This could be just what we needed to reopen (the plant in Arica)."

The company, of which Allende owns 89 percent, has been paralyzed since the beginning of the year. The remaining 11 percent belongs to Citroen, with whom negotiations are now under way. Allende is also talking with Nun & German and Chrysler representatives.

According to Allende, the state will collect needed fiscal funds. He said he believes a "good overall solution has been achieved that harmonizes the interests of the entire country—from consumers looking for a small car, to those local companies that fabricate medium-sized vehicles at prices compatible with buyers' means."

He said companies like Peugeot that produce high-quality vehicles at prices under $12,000 will not be affected much by the new taxes. Local industries will just have to produce vehicles in the engine-size range of 850 to 2,000 cc at compatible prices, he said.

Though Fiat executives are also restudying the situation in view of the new tax structure, a spokesman said anyone optimistic about the auto industry in Chile probably did not understand the economic plan. The Fiat plant in Rancagua remains closed in the meantime.

Toyota is especially unhappy. Management let it be known that it considered the whole plan discriminatory against larger cars and, thus, neither beneficial to the consumer nor a valid means of increasing state revenue.

Present Toyota inventory will last for the next six months since projection for 1984 sales is just 14,000 units. Thus, there will be scant income during this time. The measures will slow down sales in precisely that category which sells the most, Toyota declared.

• Apart from the new income taxes on all auto sales, a custom's surtax of 20 percent will affect all imports indefinitely beginning in March. Automobiles of engine sizes greater than 850 cc will be hit with an even higher tariff—a whopping 50 percent.

In essence, local vehicle manufacturers will have a clear advantage over importers, but the measures are late, if not too late, for companies that have already been sacrificed.

While imported automobiles will be all but out of range, locally produced units will also take a big bite out of the consumer's pocket. Though importers have little possibility of adapting sizes to new demand—due to slow-selling stock—locals will surely try to do so.

Excited as was the president of one closed-down plant, the question can seriously be posed as to whether the Chilean market offers all that much food for optimism. In the coming years, it will hurt to buy a car in Chile.

Market shares in Chile
(January-October, 1983)

Suzuki	17.0 pct.

Ford	1.2 pct.
Volkswagen	1.9 pct.
Mazda	1.7 pct.
Hyundai	0.9 pct.

Party marks publication of Dryfus biography

NEW YORK. — Rene Dryfus, legendary race driver and mainstay of the auto scene in this city, was honored at a party marking the publication of his biography, My Two Lives: Race Driver to Restauranteur.

Hosted by fashion designer John Weitz, the guest list was a "who's who" of the local automotive, art and social set.

But the star of the evening was Dryfus, who, with his brother Maurice, operated Le Chanteclair, a restaurant here that was the home away from home for many drivers, auto writers and industry leaders when they passed through the city.

Dryfus referred to the biography, which was written with Beverly Rae Kimes, as his "book of memories."

Ford spending in Missouri increases 33 pct. for 1983

ST. LOUIS. — The Missouri economy received a $282.5 million boost from Ford Motor Co. operations during 1983, an increase of 33.25 percent from $212 million in 1982 and up 59.60 percent from $177 million in 1981.

The 1983 total, principally affecting the St. Louis and Kansas City areas, included $228.5 million in wages paid to Ford employes, $50.8 million in goods and services bought locally and $3.2 million in local and state taxes.

In the St. Louis area, Ford employe wages topped $95 million, up from $55 million in 1982. This sharp gain reflected the addition of a second shift at the suburban Hazelwood assembly plant to meet the demand for Mercury Grand Marquis and Ford Crown Victoria models.

During the year, the company bought goods and services from St. Louis area businesses valued at $10.8 million. Ford and its 2,860 St. Louis employes contributed $126,000 to the United Way.

The company's local Community Relations Committee gave more that $25,000 to St. Louis civic and charitable groups and donated automotive training equipment to several area schools.

In addition, the 259 Ford and Lincoln-Mercury dealerships in the company's St. Louis sales zones had 1983 payrolls exceeding $82 million. A year ago, 258 dealerships had payrolls of $53 million.

Robert Hurford, manager of the Hazelwood plant, said production of Mercury and Ford cars totaled 185,856 in 1983, more than double the 90,250 built in 1982.

He said that Ford is spending between $250 million and $300 million to convert the plant to production of the new Aerostar van, with production scheduled to begin late in 1984.

Albert Walker, Ford Division district sales manager, said district dealers sold 53,000 new cars and trucks in 1983, an 8.8 percent gain over the 1982 total. Eric Sonnett, L-M district sales manager, reported new car sales of 248,000, a rise of 9 percent over the previous year.

Dealers invested almost $1.8 million in new and improved facilities during the year.

R. E. Turecki, St. Louis district manager for Ford Parts and Service Division, said 1983 sales of Motorcraft-brand and other parts to local dealers and distributors exceeded $24 million.

In addition to the Hazelwood plant, Ford facilities in the St. Louis area include district offices for Ford, L-M and Ford Parts and Service divisions and Ford Motor Credit Co.

Honda using plastic panel in steel sandwich

TOKYO. — A new composite material — two steel sheets sandwiching one of plastic — is being used by Honda Motor Co. to reduce weight in automobiles, according to a report published here.

The new product is equal in strength to cold-rolled steel sheet but is about 50 percent lighter, said the Japan Economic Journal.

The material, it said, was developed separately by two Japanese firms, Kawasaki Steel Corp. and Nisshin Steel Co. Honda is using the material made by Kawasaki.

Honda is using the material as part of the inner trunk panel in its Civic Van, the newspaper said, and is scheduled to use it for the air-cleaner casing in the Civic coupe and Accord.

Court enjoins Washington firm in 'pirating' case

LOS ANGELES. — A California federal court has prohibited Convertible Concepts, Ltd., of Blaine, Wash., from building, selling or disclosing information about a Camaro/Firebird convertible conversion designed by R. Straman Co., of Costa Mesa, Calif.

The restraining order, issued last month, follows a lawsuit filed by Richard Straman which charged that Convertible Concepts and its owner, Scott Lipton, had pirated his design.

Lipton said he was innocent of the charges but agreed to the restraining order.

Also named as a defendant in the lawsuit was Duquet-Sawdy, a Michigan specialty car firm. That litigation continues.

Dealer accused of bugging buyers

BUFFALO.—The State Attorney General's office has filed suit against suburban West Seneca Ford, charging dealership personnel with eavesdropping on potential customers to see what they would pay.

The suit charges that dealership personnel left would-be car buyers alone in a room monitored by an intercom. The information gleaned from the overheard conversations is said to have been used to determine a likely price for the car being considered by the customer.

Attorney General Robert Abrams said that because of these practices, "numerous consumers" paid higher prices for cars.

Year opens with 1,357,995 units; 61-day supply

New-car stockpile pushes upward

Continued from Page 1

with a 63½-day stockpile, down slightly from 64 days a month earlier.

American Motors had an 81-day supply Jan. 1, up from 68 days Dec. 1 and heavy enough to cause the maker to trim production schedules for January. Renault stocks were heavy, while the supply of Eagles was still on the lean side.

Volkswagen of America had an 86-day supply of U.S.-built Rabbits Jan. 1, compared with a 58-day stock a month earlier, while Honda went into the new year with a 20-day supply of U.S.-built Accords, off slightly from 22 days on Dec. 1.

The Jan. 1 domestic new-car inventory was divided this way: GM, 54.29 percent; Ford Motor Co., 27.14 percent; Chrysler Corp., 12.71 percent; AMC, 3.88 percent; VWoA, 1.57 percent, and Honda, 0.41 percent.

A month earlier, the domestic new-car inventory was divided as follows: GM, 54.37 percent; Ford Motor Co., 27.84 percent; Chrysler Corp., 12.12 percent; AMC, 3.88 percent; VWoA, 1.41 percent, and Honda, 0.38 percent.

By size class, the standard and luxury segments were well below the total industry figures. All segments were up from the Dec. 1 levels.

On Jan. 1, the industry had the following days supplies by market class: Subcompact, 63; compact, 67; intermediate, 63; standard, 49, and luxury, 38.

A month earlier, days-supply figures by market class were: Subcompact, 62½; compact, 63; intermediate, 57½ standard, 45, and luxury, 34.

The Jan. 1 domestic inventory was divided this way among the market segments: Subcompact, 20.23 percent; compact, 26.26 percent; intermediate, 35.75 percent; standard, 10.06 percent, and luxury, 7.70 percent.

A month earlier, the inventory was divided as follows: Subcompact, 19.87 percent; compact, 26.47 percent; intermediate, 36.12 percent; standard, 10.08 percent, and luxury, 7.46 percent.

The Jan. 1 days-supply figures by market class were:

Subcompact — Fiero, 18; Accord, 20; Horizon, 55; Omni, 55; Escort, 59; Chevette, 63½; Laser, 65; Encore, 68; Turismo, 74; Daytona, 76; Lynx, 80; Rabbit, 86; EXP, 90; Charger, 98; Pontiac 1000, 99, and Alliance, 108½.

Compact — Eagle, 44; Cavalier, 46; Camaro, 58; LeBaron, 59; Reliant, 62; Firebird, 64; Aries, 66; Dodge 400, 73; Tempo, 76; Sunbird, 76; Topaz, 85; Mustang, 89; Cimarron, 93; Skyhawk, 98; Firenza, 113, and Capri, 138.

Intermediate — Malibu, 22; LTD, 44; Cutlass Ciera, 45; Pontiac 6000, 46; Cutlass Supreme, 51; E-Class, 52; Celebrity, 61; Century, 61; Grand Prix, 62½; Regal, 63; New Yorker E, 67; Marquis, 70; Bonneville, 71; Citation, 73; Thunderbird, 75; Dodge 600, 76; Monte Carlo, 82; Omega, 95; Cougar, 98; Phoenix, 98, and Skylark, 103.

Standard—Cordoba, 21; Gran Fury, 36; Olds 88, 37; Diplomat, 44; LeSabre, 48; Mirada, 50; Chevrolet, 56; Crown Victoria, 56; Grand Marquis, 56, and Parisienne, 56.

Luxury — Seville, 29; Eldorado, 31; Lincoln, 31; Cadillac, 38; Toronado, 38; Corvette, 38; Olds 98, 40; Electra, 47; Continental, 49; Riviera, 57, and Mark VII, 90.

Japanese near a road test of hydrogen-supply device

TOKYO.—A test device to supply hydrogen to an experimental hydrogen-powered automobile is under development in Japan, according to a report in the Japan Economic Journal.

The companies, Mitsubishi Heavy Industries, Ltd., and Mitsubishi Steel Mfg. Co., are expected to have the device ready for testing early this year.

The two companies were reported as revealing that they have developed a special process to absorb and store hydrogen in the form of an explosion-proof chemical compound.

When completed, the test device is to be tested with a hydrogen-powered auto engine now under develpoment by MITI's Mechanical Engineering Laboratory, the paper said.

The entire project is being supported by MITI's oil-saving Sunshine Project's hydrogen energy technology development program.

The prospective hydrogen-storing device is reported to be a vessel containing 22 stainless steel tubes, each measuring one meter long and 6 centimeters in diameter.

Each tube is filled with the chemical compound, sort of a powdery alloy, that either sucks hydrogen gas, preserves it or releases it.

When cooled down or pressurized, the alloy reacting to hydrogen absorbs the hydrogen and turns into a metallic compound and releases heat. When heated or depressurized, it emits hydrogen and absorbs heat.

When two sets of the device are used, the paper said, the proposed test vehicle will travel for about 110 miles after each hydrogen filling.

Linton succeeds Harris

ST. LOUIS. — Fred R. Harris, chairman of Broadway Ford Truck Sales, Inc., here, has retired. Ell R. Linton, president/general manager, was named by Ford Motor Co. as the dealer.

Adding Cadillac

Ray Grogg, Cadillac Minneapolis zone manager, looks on as Jack Larkin, president of Larkin's Tomah Auto Service, Tomah, Wis., signs an agreement to handle Cadillac. The firm has changed its name to Larkin's Pontiac-Cadillac-GMC, Inc.

Car output 48 pet. above last year

Makers build 150,551 for week

By Mary Beth Mayer
Staff Writer

Last week, domestic auto makers slated production of 150,551 units, a 10.63 percent improvement over the prior week's 136,097, and 48.57 percent better than 101,336 units built in the year-ago week.

The cumulative two-week total for the new year reached 286,648, up 58.68 percent from 180,650 in the comparable 1983 period.

Breakdown for the week by company was: General Motors, 65.27 percent; Ford Motor Co., 14.37 percent; Chrysler Corp., 14.22 percent; American Motors, 3.19 percent; Volkswagen of America, 1.56 percent, and Honda, 1.39 percent.

Four assembly plants were idle last week. Ford's Dearborn, Kansas City and Lorain (O.) points were shuttered for inventory realignment, while GM's Willow Run (Mich.) facility was closed to rearrange line speed.

Back last week after an extended holiday vacation was AMC's Kenosha (Wis.) plant.

Working two shifts on Saturday (Jan. 14) at GM were: Detroit, Flint (B-D and G lines), Lansing (B-D and G lines), Janesville (Wis.), Leeds (Mo.), Lordstown (O.) and Pontiac.

Five Ford facilities put in extra daily hours. They were: Chicago, Edison (N.J.), St. Louis, Wayne (Mich.) and Wixom (Mich.). This week, Atlanta, Chicago and St. Louis are on daily overtime.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 put in two daily 9-hour shifts. Jefferson (Detroit) worked two daily 8½-hour shifts and St. Louis No. 2 operated one daily 10-hour shift. The same daily schedule will be followed this week with the exception of St. Louis No. 2. Belvidere and St. Louis No. 1 worked two 8-hour shifts Saturday.

Beginning today, Jan. 16, Chrysler adds 1,500 workers at St. Louis No. 2 for a second shift to build the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury. The two-shift operation will produce 640 cars per day, Chrysler said.

Honda plans second line to double Marysville output

GARDENA, Calif.—American Honda has announced plans to double the capacity of the company's Marysville (O.) assembly plant, adding a second line.

Construction on a 700,000-square-foot addition to the one-million - square - foot facility is scheduled to start within two months and the plant is expected to begin assembly of Civics by mid-1986. In 1988, the plant will be capable of operating at its capacity of 300,000 units per year. A Honda spokesman said the current facility is scheduled to reach its maximum capacity of 150,000 Accords per year this May.

The company also announced that it is evaluating sites for an automobile engine manufacturing plant in the U.S. The auto engine plant would be in addition to previously announced plans for a U.S. motorcycle engine facility.

Previously, Honda had announced it was going to invest $30 million to expand U.S. motorcycle operations to include engine production, beginning early in 1985.

The auto-plant expansion will require an investment of approximately $240 million for additional automated production and assemby - line equipment. This will increase total U.S. production investments to $580 million, affirming American Honda's commitment to reinvesting its earnings in the U.S.

• The $240 - million expansion will allow Honda to produce an additional 150,000 cars a year, beginning in mid-1986. Honda's current U.S. auto plant began production in November, 1982.

In Tokyo, Honda President Tadashi Kume said Honda is confident about expanding its U.S. production facilities because it is pleased with the quality of products turned out in Ohio and because of the "outstanding relationships Honda of America has enjoyed with its associates and the community."

Honda's U.S. production in 1983 was 40,783 motorcycles and 55,337 cars. This year, Honda expects to produce 70,000 motorcycles and 130,000 cars, including the production of the three-door Accord, in the U.S.

American Honda celebrates its 25th anniversary this year.

Volvo honors Riley for 20 years as dealer

STAMFORD, Conn. — James R. Riley, Stamford Volvo, has been honored for 20 years of service as a Volvo dealer.

Stamford Volvo has a staff of 22 people and sells more than 300 Volvos annually, according to Volvo of America Corp.

Truck production rises to 60,792, double '83 total

Last week, the first full week of production in the new year, the truck makers targeted completion of 60,792 units, leading the prior shortened week's 46,475 by 30.81 percent and more than twice the 29,171 built in the year-ago week.

During the first two weeks of assembly this year, the manufacturers produced 107,267 trucks, more than double the 49,692 finished in the same period in 1983.

Ten truck assembly facilities put in extra hours last week.

At General Motors, the Janesville (Wis.), Lordstown (O.) and Pontiac No. 5 plants worked two shifts Saturday (Jan. 14) while the Detroit point put in one shift that day.

Ford scheduled extra daily hours at all of its truck plants. This week, Ford plans the same overtime schedule.

Canadian makers double output of trucks for 1984

The Canadian truck makers have built more than twice as many units thus far this year as they did in the comparable 1983 period.

The estimated output for last week was 14,025, a 14.86 percent gain from the previous week's build of 12,211. The total was up substantially from 6,853 units completed in the year-ago week.

The manufacturers have assembled 26,236 trucks so far this year, compared with 11,970 through Jan. 15, 1983.

Chrysler Corp. slated production of 1,215 Dodge Caravans and 1,065 Plymouth Voyagers at its Windsor plant last week, bringing the year-to-date T-115 total to 4,422.

Auto production last week was targeted at 17,486 units compared with the prior week's 17,497 and the year-ago week's 17,502. However, the year-to-date total of 34,983 leads the 1983 total of 31,898 by 9.68 percent.

Chrysler is adding a second shift at its Windsor plant beginning today (Jan. 16), involving the addition of 1,750 workers. Daily production of minivans there will be 912 units, Chrysler said.

New peak eyed by GM-Europe after '83 mark

By Richard Feast
European Editor

BRUSSELS.—General Motors has just enjoyed its best-ever sales year in Europe, but will be aiming for more in 1984, according to Ferdinand J. Beickler, chairman and managing director of Adam Opel.

Quoting preliminary figures, Beickler said sales of Opel and Vauxhall Car rose 22.50 percent —some 215,000 cars—to an all-time high of 1,170,000 last year. The figure broke the previous best, set in 1978, by 150,000.

"And that was accomplished in an overall European market which grew by less than 5 percent. Thus our company once again recorded the highest growth rate among all European volume car manufacturers," said Beickler.

He forecast 1984 GM sales of more than 1.2 million, close to a market share of 12 percent.

GM believes this year's market will be worth about 10.5 million units, rising to 10.8 million next year and 12.5 million by 1990.

Opel has made advances across the whole of Europe, with the exception of one country: Italy. The aggressive approach adopted by Fiat, with a new model (Uno) in competition with the one with which Opel hoped to increase sales (Corsa), saw all other importers fall back as well.

John G. Bagshaw, Opel executive director for sales, agreed that Italy will be one of this year's priorities. There will be substantial changes in pricing and advertising policies, to follow personnel changes in the country.

Another priority, he reported, is to improve business beyond Europe, including the Middle East and Africa.

This year, GM will invest about $1 billion in Europe as part of its $6 billion investment program. Next year's total could be up to 10 percent more, Beickler forecasted.

The Opel officials were gathered at the International Motor Show at Brussels, where the European Community has [illegible] headquarters. It prompted Beickler to call for a "joint [illegible] political solution to the lead-free fuel issue."

With Germany seemingly pressing ahead for lead-free gas by 1986, Beickler stressed, "Such important decisions cannot be made piecemeal. They need to be made on the European level, in order to minimize the cost to the consumer and maximize the benefits to society."

Little boat

From Ford of Europe and Ghia

Ford Motor Co. has revealed this design concept for a two-passenger convertible, called the Barchetta, or "little boat." The body was designed jointly by Ford of Europe and Ghia Operations in Turin. The design uses the current Fiesta XR2 platform and mechanicals. Ford has no immediate plans to manufacture a vehicle of this type.

Import-car stocks steady at 30 days; many makes short

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars inched upward during December—at least it appeared to. In fact, it was an illusion, caused by a slightly lower selling rate.

The industry had a 30-day supply of new imported cars in stock Jan. 1, up from 29 days a month earlier. But the actual number of cars in dealer and port inventories declined to 223,527, compared with 224,290 on Dec. 1.

A year earlier, there were 380,316 new imported cars in inventory on Jan. 1, which was a healthy 54-day supply.

This year's inventory was riddled with shortages, many of which were severe enough to keep a lid on sales. Paradoxically, the bare-bones inventory was probably the cause of the higher days-supply figure Jan. 1.

The supply of new imported pickup trucks declined during December, to 47 days from 55 a month earlier. But in a reversal of the car situation, the industry had more imported trucks in stock Jan. 1 than a month earlier, 81,748 compared with 81,322.

The combined imported car and truck inventory Jan. 1 totaled 305,275, a 33-day supply, virtually unchanged from the Dec. 1 stock of 305,162, also a 33-day supply.

• Japanese lines were again unable to build up stocks and remained at 24 days for the third straight month. Individual nameplate inventories ranged from virtually gone (Toyota) to short. Only Chrysler Corp. had a strong supply of Japanese cars.

There were 142,261 Japanese-built cars in inventory Jan. 1, off slightly from 142,578 a month earlier.

Japanese makes and their Jan. 1 days-supply figures were: Toyota, 10; Honda, 24; Nissan, 26; Subaru, 33; Mitsubishi, 33; Mazda, 36, and Isuzu, 45. Chrysler had a 69-day supply of Mitsubishi-built cars, including: Plymouth Vista, 38; Dodge Vis-

Domestic deliveries up 32 pct. for Jan. 1-10; all makers gain

Car-sales year opens with a bang

By Jenny L. King
Staff Writer

U. S. auto makers accelerated into the 1984 calendar sales year with a 32.19-percent increase and their best early January total since 1980. Increases for the individual companies ranged from 12.14 percent at American Motors to Ford Motor Co.'s 43.37-percent rise.

The six makers combined forces to retail 149,136 units Jan. 1-10, up 32.19 percent from 112,822 a year earlier and strongest since 160,000 back in 1980.

General Motors reported first-period sales of 91,488, up 25.59 percent from 72,849 last year. Ford Motor Co. was up 43.37 percent, to 32,673 from 22,709. Chrysler's total reached 16,935, up 32.41 percent from 12,790. AMC was up 12.14 percent, to 3,925 from 3,500; Volkswagen was up 27.21 percent, to 1,239 from 974, and Honda dealers retailed 2,076 Ohio-built Accords. There were no year-ago figures for Honda for the 10 days, its first U. S. report was made at the end of January, 1983.

GM's share of the market dropped to 61.35 percent from 64.57 percent. Ford climbed to 21.90 percent from 20.13 percent. Chrysler had 11.36 percent, up slightly from 11.34 percent. AMC dropped to 2.63 percent from 3.10 percent. VW had 0.83 percent this year compared with 0.86 in 1983, and Honda held 1.93 percent of the current market.

• Cadillac announced that its sales of 8,505 new cars in the first January period were a record, beating out the previous

AMC-Chinese venture takes a step forward

BEIJING, China. — Beijing Jeep Corp., Ltd. (BJC), a $51 million joint venture between American Motors and Beijing Automotive Works (BAW), has begun the upgrading of plant and equipment in anticipation of producing four-wheel-drive utility vehicles and trucks here.

Representing AMC at a ceremony hosted by the Chinese foreign trade minister and the mayor of Beijing, Tod Clare, AMC vice president of international operations, called the occasion "the first step toward changing the balance of the automotive industry in Asia."

"The Far East has become the world's fastest growing four-wheel-drive market," Clare said. "Until now, it has been dominated by a single country, Japan."

Clare told the Chinese officials that BJC "has the potential for transforming China into an automotive export base to compete with Japan."

"For American Motors," he said, "the joint venture means not only an entry into the Chinese market but the establishment of a strategic manufacturing base for competing in other Far East markets.

"For our Chinese partners, it means access to AMC four-wheel-drive technology and management systems as well as the potential for major automotive exports," Clare said.

The agreement establishing the joint venture was signed here last May. BAW's equity is 68.7 percent and AMC's 31.3 percent.

BJC's initial production plans call for approximately 20,000 vehicles in 1984.

These vehicles, to be marketed in China, will be an upgraded version of BAW's current BJ 212 model and will feature the new AMC 2.5-liter four-cylinder engine introduced in the U. S. last fall.

Beyond 1984, BJC will develop a new series of vehicles derived from a platform compatible with AMC product plans.

breaking news

Japanese makers budget more for R&D

TOKYO.—The six major Japanese auto makers plan to increase spending for research and development this year, according to a report published here. Money will be spent for test tracks, wind tunnels, design centers and R&D facilities. R&D spending is expected to increase 10 percent over last year, although the makers plan cutbacks in plants and equipment.

Car costs sliced for 2nd time in history

NEW YORK.—For only the second time in history, costs to own and run a new compact car declined in 1983, Hertz Corp. said. In its annual auto expense estimate, Hertz said the 1983 cost for a compact was 43.28 cents a mile, down 3.1 percent from 44.67 cents a year earlier. The 1.4-cents-a-mile drop ended a decade of jumps that boosted operating outlays 174 percent, Hertz said. The drop was attributed to lower interest rates and decreased gasoline costs. Average purchase price rose 3.2 percent, Hertz said.

Ford sells Montego name to Austin Rover

LONDON.—Ford Motor Co. has sold its registered Montego name to Austin Rover for use on the forthcoming (April) sedan version of the Maestro hatchback. Montego has never been used in Europe. The Austin Rover model is the one known by the LM11 code name.

Eyes possibilities in Korea

Caldwell explains Mexico plans

By Kathleen Hamilton
Financial Editor

Ford Motor Co. Chairman Philip Caldwell characterized his company's decision to assemble cars for the North American market in Mexico as motivated more by government policy than by prospects of saving money.

"But we have to be competitive," he said, and confirmed that Ford has had talks with Korean car maker Hyundai.

"What the future will hold, I don't know," he said of those talks. Caldwell spoke to reporters before his speech last week to the Economic Club of Detroit.

Ford of England has had a long relationship with Hyundai, he said. Hyundai had long assembled Ford Cortina kits until that car was discontinued; it now assembles about 75 Granadas a month from Ford of Germany.

"Korea is a place we know, and are quite at home with," Caldwell said.

Hyundai, Korea's largest auto maker, is in the process of tripling its auto capacity to 300,000 units a year. It entered the Canadian market this month and hopes to expand into the U. S., perhaps in 1985 or 1986.

Japanese auto maker Mitsubishi owns a 10-percent stake in Hyundai, and Chrysler Corp. in turn owns 15 percent of Mitsubishi.

Ford's decision to assemble a Toyo Kogyo-designed car in Mexico for export to the U. S. and Canada will save jobs of workers in the two northern countries, Caldwell said. By meeting the Mexican Government's demand that auto exports equal imports, Ford will be allowed to continue to build cars in Mexico that have a high U. S. content, he said.

Caldwell announced during his speech that Ford agreed to purchase the Dearborn Inn, one of the nation's first airport hotels, from the Edison Institute.

Purchase price was not disclosed, but the Edison Institute had originally estimated it could bring as much as $6.5 million. An Edison Institute spokesman said a lot of bids, offering a wide range of prices, had been received.

The institute decided to sell the hotel rather than make the huge investment needed to keep it a first-class hotel, he said. The funds will be used to run Henry Ford Museum and Greenfield Village.

Henry Ford built the hotel in 1931 to accommodate airplane passengers at nearby Ford Field, now a Ford test track. Ford Motor Co. gave the hotel to the non-profit Edison Institute in 1953 to generate funds for the museum and Greenfield Village — something it has done consistantly, an institute spokesman said.

Caldwell also announced construction will begin this spring on the first of three office towers to be built on the former Ford estate in Dearborn. The first will be a 162,000-square-foot, six-story office building, to be ready for occupancy in 1985.

He declined to say what Ford Motor Land Development Corp. will invest in the project.

Caldwell predicted that 1984 will follow last year's pattern of quarter-to-quarter financial gains, which he said he preferred to recent boom-and-bust cycles.

"When the major auto companies release their 1983 financial results in a few weeks' time, you will discover that they will stand comparison with some of the best years we ever had," Caldwell said. "At Ford, we shall have some records to announce."

Caldwell applauded the domestic-auto industry and Detroit's leaders for gains made during the economic downturn.

"The fact is, that Detroit and all that Detroit stands for, has survived the most shattering challenge any industry has ever faced, in any period of history," he said.

Later he said, "We really don't need to be shown by our Japanese associates how to build small cars efficiently in the U. S. We do it successfully every day elsewhere in the world.

"After all, the Ford Escort is the best-selling car in the world. But we cannot build in the U. S. when the value of the U. S. dollar and our out-of-step tax policies burden us with non-competitive costs and favor Japanese producers with unearned subsidies."

Caldwell also said the U. S. auto industry has saved more energy than any industry or government in the world.

"The cars produced by the domestic industry last year were 83 percent more fuel-efficient than those produced in 1974," he said. "Last year alone, this country saved 15.1 billion gallons of gasoline due largely to the fuel-economy improvements by the U. S. automotive industry.

"At today's average gasoline price, it comes to a grand total savings to consumers of $20 billion in 1983 alone."

Porsche's new Carrera

Porsche's 1984 911 Carrera has a 200-HP, 3.2-liter engine which accelerates the car from 0 to 60 MPH in 6.3 seconds and to a top speed of 146 MPH. It is rated at 20 MPG city, 32 MPG highway by the EPA. The sport coupe is priced at $31,950.

Used-car dealer, employe found slain at car lot

HIGH POINT, N. C.—A used-car dealer and an employe were found slain in their car lot. Both men had been shot once in the head.

Kenneth Ray Hazelwood, 46, owner of the business, and employe Grady Junior Williams, 57, had moved the business a month ago and painters had just finished sprucing up the building for a grand opening.

Sheriff's Capt. Larry Emerson said robbery was not the apparent cause of the killings since nothing appeared to have been disturbed or missing and there were no signs of struggle or forced entry.

Total '83 retail sales climb 22.3 pct.

Ford edges Chevy for truck title

Retail sales of trucks of all types in the U. S. in 1983 were up 22.3 percent over the preceding year, with all three market segments sharing in the advance.

Retail truck sales in 1983 totaled 3,129,474, compared with 2,559,218 in 1982.

Ford took the divisional crown with sales of 991,958 in 1983 to edge Chevrolet, which posted sales of 984,587. Ford's total was up 25.3 percent from its preceding year sales of 791,547, while Chevrolet was up 21.7 percent from 808,805.

It was the sixth year of the last seven in which Ford claimed the truck sales leadership.

Ford also led the way in December, when industry truck sales totaled 306,007 units, up 48.2 percent from 206,518 in December, 1982. Ford outdistanced Chevrolet in December, 96,378 to 91,770.

Light-truck sales in December totaled 287,042, up 49.1 percent from 192,522 a year earlier. For the year, light-truck sales totaled 2,940,751, up 23.8 percent from 2,375,923 in 1982.

Sales of medium trucks in December totaled 3,865, up 18 percent from 3,273 a year earlier. For 1983, medium truck sales were up 4.5 percent to 47,693 from 45,642 in 1982.

Heavies posted 15,100 sales in December, up 40.82 percent from 10,723 a year earlier. It was the fifth straight month in which heavy trucks gained over the year-earlier month's total.

For the full year, sales of heavy-duty trucks were up 2.5 percent at 141,030, compared with 137,653 in 1982.

The action in the compact truck market continued hot and heavy with sales in December of 111,243 compacts, up 73.5 percent from 64,103 a year earlier.

Domestic compacts were up more than imports in December. Domestic compact sales, including captive imports, were up 101.5 percent to 68,730, compared with 34,102 a year earlier. Importers sold 42,513 compact trucks, up 41.7 percent from 30,001 a year earlier.

For the full year, compact sales totaled 1,096,621, up 42.79 percent from the 1982 total of 767,993. The full year sales included 676,536 compacts by domestic makers, up 48.47 percent from 455,684, and 420,085 by importers, up 34.51 percent from 312,309.

Dodge and Chrysler-Plymouth dealers retailed 29,202 light trucks during December, up 47.4 percent from 19,805 a year earlier. For the year, they sold 274,178 trucks, up 11.5 percent from 245,945.

GMC dealers retailed 23,708 trucks in December, a record for the month, up 31.8 percent from 17,987 a year earlier. For the year, GMC sold 264,148 trucks, up 15.4 percent from 228,934 in 1982.

Sales of four-wheel-drive Jeep vehicles during December totaled 10,555, up 95.8 percent from 5,392 a year earlier. For the full year, Jeep sold 82,140 trucks, up 28.8 percent from 63,761 in 1982.

Ford to close factories in Dagenham and Cork

LONDON. — Ford last week (Jan. 16-20) announced closure plans of two plants in countries where it is market leader.

The Dagenham foundry in England is to shut down by April next year with the loss of 2,000 jobs. In Ireland the Cork assembly plant will close in the second half of this year, resulting in 800 additional layoffs.

Neither confirmation came as a surprise. Ford has long maintained that the foundry was uneconomic, and three years ago began a cost-cutting exercise which reduced manning by a half.

It is believed that Ford plans to switch from iron to aluminum for its engine and gearbox components, and that they will be made in Cologne rather than in the UK.

The decision has caused widespread fear among other Dagenham workers over the longer-term manufacturing future of the plant. Ford has always maintained that UK costs are higher than in Germany, Belgium or Spain, and the foundry decision is being interpreted as the beginning of the end. It will be fought fiercely by the unions.

The Cork plant produces only the Sierra model, though in earlier days before Ireland was a member of the EEC a full range was produced. But membership in the community has seen gradual reduction in tariff barriers for imports—they disappear completely next January —and Ford was the last of the large manufacturers with a production presence in the country.

Most of the 80 Sierras produced each day were sold in Ireland. The same model is also produced in the much larger Genk (Belgium) and Dagenham plants.

A first

SPRINGFIELD, Mo. — The first-ever Springfield Auto Show is scheduled for April 13-15 at the Trade Center. It will be sponsored by the Springfield New Car Dealers Assn.

'No automobile company can be an island today'

More joint ventures are predicted by Smith

DETROIT. — "No automobile company can be an island today," General Motors Chairman Roger B. Smith said in reference to his company's joint venture with Toyota Motor Corp. to produce a car in Fremont, Calif.

Smith spoke at the annual Detroit Auto Show Industry Dinner and said that more and more, companies like GM will be cooperating with other companies around the world to find the best ways of building products to serve their customers and protect their dealers.

Smith told the local dealers and their guests that GM "is prepared to take whatever steps are necessary" to provide products for its customers.

Smith predicted that this year's domestic car and truck sales will be 14 million units — 10.5 million cars and 3.5 million trucks.

He sees even brighter prospects farther down the road.

"Sometime in the mid-1990s, North American new-car and truck sales could reach 20 million units for the first time," Smith said. "In the same period, worldwide car and truck sales could reach 60 million."

That would be 22 million units better than the peak year of 1978, when the worldwide total was just over 38 million units, he said.

• Smith also discussed GM's Saturn Project, the no-model-year development program for a new family of U. S.-built cars.

Declaring that Saturn is more than just a car, he said, "Saturn is actually an attempt to find a new way of designing, engineering and building cars in this country — a way that will be cost competitive with foreign cars."

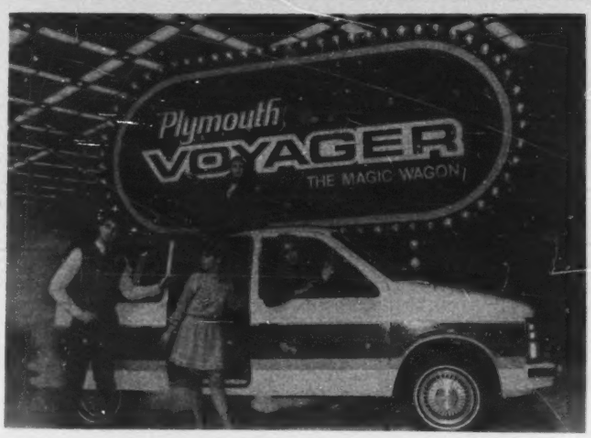
Smith said Saturn would bring about widespread use of modular assembly techniques and the role of GM workers will change.

"For instance, production teams will be standard in Saturn, and these teams will help determine how the work will be organized and carried out by the team members," he said.

If Saturn proves to be successful, Smith said, GM will apply the principles of the project across divisional lines.

"That means we'll eventually be producing all our products more efficiently, more effectively," he added.

Finally, Smith called for a renewed spirit of cooperation between auto makers and their dealers to more completely satisfy auto buyers.



Voyage with a mime troupe

A mime show at the Detroit Auto Show last week introduced the 1984 Plymouth Voyager. The Alice Dysart Fantasy Players demonstrated the features of the vehicle in a mini-show at the Chrysler-Plymouth exhibit.

Buick, Fisher workers veto overtime cut

By Marjorie Sorge
Labor Editor

Workers at the Buick assembly plant and the companion Fisher Body facility in Flint have rejected a company proposal which would shorten their workweek and return about 1,700 laid-off workers to the job by adding a third shift at those operations.

The company proposal called for workers at the plants to work four 10-hour days but to give up overtime pay. In exchange, Buick would add a third shift to the operations.

The UAW countered with a proposal requiring overtime pay for the time worked over 8 hours daily.

According to Jerry Butler, Buick labor relations, the UAW program would have made Buick non-competitive.

Last week, workers at the Buick assembly plant rejected the company's plan which would have returned about 600 workers to that facility. In the vote, 596 favored working the normal two shifts with overtime pay; 440 wanted the UAW's counter proposal while only 28 voted for the company plan.

A similar vote was held at the Fisher Body facility earlier this month and the company plan was also rejected. About 1,100 currently laid off from Buick assembly operations could have been called back at Fisher Body if the third shift were added. According to Buick, Fisher Body has already recalled its laid-off workers but would have provided jobs for some laid off.

UAW Vice President Donald F. Ephlin, director of the UAW's General Motors department, said the vote was "unfortunate" and "premature" and should not have been held.

"It wasn't binding on anyone," he said. "We don't go to the people with a vote until we have an agreement to ratify."

The changes in overtime would have to be approved by the international UAW since that issue is covered in the national UAW-GM agreement and that had not yet been done, Ephlin said.

But he said the workers in the two plants are not greedy in wanting to keep the overtime pay rather than help those laid off return, but were just fearful that Buick was taking advantage of that concept to make the overtime changes.

The Buick facilities will be closed for about six months next year to make way for the Buick City operation. Fisher Body will then be consolidated into the assembly plant and about 3,600 additional jobs will be lost.

The two plants have been working six days a week, nine hours a shift for about a year.

According to Butler, Buick is comfortable with its position on the overtime question and returning for more talks is up to the union. Ephlin said he hopes more talks will take place. He said the union proposal was a good one and emphasized that it lost by only a few votes.

Jeep honored

SOUTHFIELD, Mich. — The 1984 Jeep Cherokee Sportwagon has won 4 - Wheel & Off - Road magazine's "4x4 of the year" award for 1984.

Increases vary by maker

New Japanese quotas are listed

Late last year the Japanese government agreed to extend the period of restrictions on new-car exports to the U. S. from the original three years to four, to 1.85 million units for 12 months from 1.68 million.

Instead of an across-the-board increase per importer of the 10.1 percent indicated by the 170,000-unit growth, industry officials in both the U. S. and Japan suggested certain companies will be allowed higher numbers as others are held to more modest totals.

Although Japan's Ministry of International Trade and Industry has not verified the export levels it will allow the major auto manufacturers, Nihon Keizai Shimbun, a Japanese economic daily newspaper, reported the following allocations:

Toyota Motor Co. will be permitted to expand to 551,800 from its current limit of 516,659.

Nissan Motor Co. can anticipate 487,100 compared with 456,030.

Honda climbs to 372,400 from 348,631.

Toyo Kogyo increases to 173,500 from 159,282 Mazda imports into the U. S.

Mitsubishi Motors Corp. goes to 122,400 from 112,584.

Fuji Heavy Industries, Ltd. gets a 75,800 limit compared with 70,014 Subarus currently.

Isuzu Motors, Ltd., jumps to 50,000 from 16,800, and Suzuki Motor Co. will have a ceiling of 17,000. No Suzuki passenger cars have been sold in the U. S. to date.

• Isuzu numbers will be expanded by Isuzu cars to be imported by General Motors for sale by its dealers in late 1984. American Isuzu Motors launched its product line in the U. S. in 1981. Sales first were reported in March of that year and for the remaining months they added to 17,805. In 1982, Isuzu dropped to 15,462, rebounding to 20,722 in 1983.

Because the final quotas for the various companies are not yet confirmed, some speculate that Isuzu and Suzuki, both business affiliates of GM, can expect favored treatment over and above the totals Nihon Keizai reported.

GM has announced plans to import more than a quarter of a million subcompact cars from the two companies for model year 1985. Assuming a quota of, say, 47,000 Isuzu and Suzuki-built cars the first half of the period, would leave some 200,000 cars to be handled after the end of restrictions, March 31, 1985.

GM Chairman Roger B. Smith commented last week that the proposed ceilings may force his company to re-think its position.

The April 1 through March 31 restrictions year has been used since 1981 because it coincides with the fiscal year in Japan. The original agreement of 1.68 million was reached in May, 1981, with quotas per exporter determined the following August.

Shortly thereafter, a "vans" classification was added to the 1.68 million. It included Toyota's Corolla station wagon and Land Cruiser, Subaru's BRAT, Suzuki's Jimmy and Mitsubishi's Colt station wagon and amounted to 82,500 units over and above the 1.68 million.

In the world of expanding and shrinking numbers, Nissan, which is currently held to a shipment level of 456,030, reported record sales of passenger cars in the U. S. for a calendar year. Nissan's 1983 total mushroomed to 521,902.

Since the beginning of the current restricted year, April 1, 1983, Nissan dealers have retailed 386,169 new cars, leaving the company only 69,861 units to spread out over the upcoming January through March quarter.

Since April, 1983, Toyota sales add to 419,812 (including Land Cruisers and station wagons); Honda stands at 287,829; Mazda's total is 127,905, and Subaru has 118,198. Subaru also reported a sales record (156,840) in calendar year 1983.

Public comment slated on FTC used-car rule

WASHINGTON.—The "known defects" section of the FTC's Used Car Rule will be open to public comment until the end of January, the FTC has announced.

The Jan. 31 deadline will extend for 15 days the comment period on whether dealers should be required to disclose warranty terms and known defects on a sticker posted in the window of each car offered for sale.

The FTC issued such a rule in August, 1981, but Congress vetoed the rule in May, 1982. However, the Supreme Court decided last July that a legislative veto of this type is unconstitutional.

The FTC's record on the Used Car Rule was reopened at the direction of a U. S. Court of Appeals, under the terms of an agreement between the FTC and lawyers for Miller Motor Car Corp. Miller Motor Car filed a challenge to the rule's known-defects provision.

The extension of the comment period was granted by the FTC at the request of NADA, the National Independent Automobile Dealers Assn. and the Committee on Consumer Affairs of the Assn. of the Bar of the City of New York.

A 20-day period for rebuttal statements will follow the close of the initial comment phase on Jan. 31, the FTC said.

Wash. Auto Show sets attendance mark

WASHINGTON.—The 42nd annual National Capital Area International Auto Show at the Washington Convention Center here broke the attendance record set last year.

Final figures show 260,000 persons visited the show, surpassing last year's attendance of 249,000.

Dealers with heart

W. H. Robinson, president of Robinson Brothers Lincoln - Mercury, Mobile, Ala., presents a check for $2,025 to Virginia McClinton, president of the Mobile Division of the American Heart Assn. For every car sold in the last three days of December, the dealership donated from $25 to $100 to the heart association.

Spending plans trimmed by auto makers

Can the U. S. meet or beat the Japanese in new products?

By Kathleen Hamilton
Jenny King
and Mary Beth Mayer

It was to have been an $80 billion five-year spending plan — comparable to the post World War II Marshall Plan in today's dollars, more than enough to put a man on the moon and sufficient to transform all of Detroit's gas-guzzling behemoths into fuel-miserly front-drive models packed with high technology.

It isn't turning out quite that way.

Best guesses now put capital spending by Detroit's Big Four at something short of $55 billion for the 1980-1984 period; that includes their non-automotive and overseas spending, and doesn't include investments of Nissan and Honda in the U. S.

Indeed, extrapolating Department of Commerce figures for the five-year period shows only about $44 billion will be spent by U. S. vehicle manufacturers and parts suppliers by the end of this year.

Missing the original target by about half isn't necessarily a sign that the U. S. auto industry has failed, but rather that the market has changed, inflation has abated and the strong dollar buys more overseas.

True, the auto downturn trimmed capital spending plans, especially at Chrysler Corp. and at many supplier firms which were forced to diversify away from automobiles or close their plants.

On the other hand, easing of fuel prices in the U. S. unexpectedly buoyed big-car sales. That allowed General Motors and Ford Motor Co. especially to delay major expenditures by prolonging the lives of their aging big, rear-drive cars.

Phil Fricke, automotive analyst for Goldman Sachs, believes there's another important reason why automotive spending fell far short of stated goals: "Those early numbers ($80 billion) were crazy numbers," meant for consumption of the UAW and to grab headlines.

"I don't think much thought went into them," Fricke says.

Even $44 billion is staggering, however. In an industry that needs to shell out 6 percent of its sales on capital spending in a normal year (according to American Motors president Jose Dedeurwaerder), GM sank a phenomenal $9.7 billion — fully 15 percent of sales — into new plants, tooling and equipment in 1981.

Since 1980 GM has never spent less than 10 percent of its sales on plant and equipment.

Much smaller AMC put 12 percent of its sales into capital spending in 1982, and even Chrysler surpassed the industry norm in 1980 when capital spending accounted for 9 percent of its sales.

Fricke expects GM to invest another $6.5 billion this year (while warning that his prediction is very tentative). David Healy, auto analyst at Drexel Burnham and Lambert, forecasts a more modest $5.5 billion for GM this year but then $7 billion to $7.5 billion in 1985.

In either case, big-buck spending at GM will ebb when the front-drive N-cars (between the current A and J bodies in size) begin rolling and the first B-cars (Olds 88 and Buick LaSabre) are transformed into front-drive. Both events are scheduled to occur in the 1985 model year.

From then on GM will be able to use front-drive components that are already in place and refine its products. Even major product projects won't cost as much.

As GM goes, so usually goes the rest of the U. S. industry. Although both Chrysler and AMC have major projects in the works, their spending will remain small compared to GM's.

Ford chairman Philip Caldwell has said last year's spending level of $2.5 billion probably will be beaten this year. Healy says Ford could spend up to $3 billion this year and again next year. Fricke says Ford's capital spending this year could top its 1982 record of $2.97 billion.

Improvements at the Rouge steel works alone will add $400 million to Ford's spending in the next two years. Like GM, Ford was able to stretch the lives of its big rear-drive cars beyond 1985, its initial phase-out schedule.

It looks as if U. S. auto makers will be flush enough to generate more than the cash they need to finance their capital spending needs in the medium term.

Fricke goes so far as to say GM is "hemorrhaging cash," and that the cash flow from each of the Big Three is "staggering."

He doesn't track AMC, which admits it will have a harder time because of its limited product lineup.

The best news for AMC is that Renault's future product plans are in better shape than many European manufacturers, according to John Lawson, economist at Data Resources Inc., Europe.

Renault's close ties to the French government give it access to funding for future products at a time when a flat European market and stiff competition have squeezed many makers' abilities to fund product plans, Lawson says.

Of European companies, only Ford of Europe is making huge profits, although GM's European operations are in good shape, he says.

In the foreseeable future, Fiat and Renault will make money on cars but lose it on trucks, while Volkswagen will generate cash in Europe but lose it especially in Latin America and on its office-products unit, Lawson says.

Despite its troubles, French company Peugeot spent 7 percent of its sales on capital equipment in 1982 and plans to keep capital spending at about $600 million through 1985.

The Japanese have set a fast product pace by shortening the life cycles of its cars to four or five years instead of the traditional six or seven, AMC's Dedeurwaerder points out.

But where Americans will be blessed with an expanding market in the medium term, the Europeans will be cursed with a flat one.

That means European auto makers will be shopping for sources of outside financing.

The massive financial needs of the auto industry will not be able to be filled by banks, Lawson predicts. Some European new-model launches have already been eliminated. Other products have had their lifespans lengthened with updates.

European makers' plans are still very ambitious compared to the size of their market, so they likely will be scaled back, Lawson says.

• The real question for the U. S. auto industry is whether it will be able to match and surpass the Japanese in new products. Analysts in the U. S. are upbeat.

"Domestic companies definitely will be able to compete with the foreign makers," says Mike Luckey, economist for Merrill Lynch Economics. "Our industry has gotten a lot more competitive over the last three or four years, especially in its quality ratings. We will become even more competitive with the Japanese and Europeans, especially in the area of improved production techniques."

Capital investment by Japan's auto industry is expected to drop nearly 8 percent this fiscal year, according to a government survey quoted in Metalworking News.

Fiscal 1983 capital spending of $4.2 billion by Japan's auto industry is surprisingly low when considering the U. S. auto industry spent $7.32 billion, according to Department of Commerce figures.

But as Robert Cole, project director of the Joint U. S.-Japan Automotive Study at the University of Michigan points out, the Japanese figures may include only Japan's largest suppliers. With an industry heavily dependent on mom-and-pop operations and multiple layers of suppliers, actual investment in Japan is hard to track.

A whole new industry may spring up to provide warehousing for just-in-time supply of materials and parts.

For the same reason, capital spending of three of Japan's auto giants, whose stocks are traded in the U. S., turns out low (see accompanying table). Figures are for parent companies only, and much of the capital spending is done by their myriad associated firms.

Cole guesses Japanese capital spending figures should be inflated 20 percent in order to compare them accurately to U. S. spending.

If U. S. auto manufacturers are in good shape for their spending needs, U. S. suppliers are not.

The recession forced many out of business and encouraged many more to diversify away from autos. Just-in-time parts and materials supply has forced vendors to maintain larger inventories and in many cases to change their production facilities and to build nearer auto assembly plants.

And the just-in-time push has barely begun. Arthur Davis, analyst at Prescott, Ball & Turben, points out that Buick City in Flint will be using the inventory system by 1985. He expects the rest of the industry will have embraced it fully by 1987.

A whole new industry may spring up to provide warehousing, Davis says.

Because auto companies will want to use their own plants whenever possible, the current upturn will not necessarily benefit suppliers as it has automakers.

In addition, many suppliers suggest U. S. makers will continue to turn to foreign suppliers. Econobox cars are especially adapted to worldwide sourcing, Davis says. Imported steel is already taking a quarter of

Japan springs from copycat to competitor

U. S. is sole leader only in bumpers and crashworthiness

The U. S. and Japan are neck-and-neck in the race to develop superior automotive technologies.

That should not be consoling news to the domestic auto industry. It is Japan — not the U. S.—that has made great technological strides in the last decade and, in fact, leads the U. S. in certain developmental areas, according to a comprehensive study by management consulting firm Booz Allen & Hamilton.

"Looking at technology as it is related to cars for the U. S. market, we have a situation where the U. S. is at parity with the Japanese and with leading European countries," said Jim Mateyka, a Booz Allen & Hamilton vice president.

"That's a fairly big jump from 10 years ago when Japan was viewed as the copycat. Japan wasn't at parity then—but it is now."

The Booz Allen study combines analytical research with a survey of U. S. auto suppliers and numerous interviews with leading engineers at world auto companies that sell vehicles in the U. S.

• The research rates the development of modern technology by U. S., Japan and European auto makers in 13 key areas—Body, Gasoline Engines, Engine Components (such as turbochargers and fuel-injection systems), Transmissions, Wheels and Tires, Electronics, Emission Controls, Final Drive Systems, Brakes, Suspensions, Bumpers (including vehicle crashworthiness) and Steering.

Japan emerged as the technological leader in four areas—Gasoline Engines, Diesel Engines, Electronics and Suspensions.

"We have Japan becoming the world leader in small gasoline engines for several reasons," Mateyka explained. "First, they have dealt with the emission and fuel-economy requirements (of the U. S. market) by dealing first with the basic engine technology. And now they're adding electronics and doing additional work with friction reduction, noise/vibration/harshness and alternate engine materials (such as ceramics).

"The U. S. is trailing Japan ever so slightly, mainly because the U. S. took a reverse approach. Since our electronics technology was ahead, we improved our engines by slapping on electronics, rather than getting at the basic combustion."

Europe was rated at par with the U. S. on engine technology, largely because of products made in West Germany—a "formidable talent," Mateyka said. But German engines are expensive and "over-designed" for the U. S. market's 55-mile-per-hour speed limit, he added.

Not surprisingly, a large percentage of European automotive leaders cited the U. S. 55-MPH speed limit as the biggest factor inhibiting future development of advanced engines and automobiles by U. S. makers.

"They felt that U. S. development would not keep pace with the competition because of 55," Mateyka said.

• Japan has a dramatic lead over the U. S. and Europe in the development of diesel engines, the Booz Allen survey concluded. That technology gap is expected to widen in future years because of fuel prices and taxation in the U. S.

West Germany is the only country considered at parity with Japanese companies on diesel technology. Italy could become a strong force, the study noted, because astronomically-high gasoline prices have created a strong home-market demand for diesel-powered cars.

Japan, as might be expected, is also the world leader in electronics, both in control systems and in "an almost zealous commitment to electronics in terms of displays," Mateyka said. The Japanese technology base and the home-market demand for electronics is much stronger than in any other country, he said.

"We have the U. S. running a reasonably strong second, but with some reservations on the part of U. S. makers on how far they want to go," Mateyka added. "None of those reservations were seen in the Japanese."

Although Europe has a strong group of electronics suppliers, it still rates a distant third, largely because there is no home-market incentive for European auto manufacturers, the survey said.

In terms of current product sold in the U. S., Japan also has the lead—albeit a precarious one—in suspension technology. Japan has or is incorporating its advanced electronics into suspension systems and has introduced medium-priced automobiles with adjustable suspension systems (Mazda 626 and Nissan 300-ZX, for example).

"If you look at the supplier base and some of the innovations, the United Kingdom and France have the technology experience lead but the Japanese are ahead with the implementation of electronic controls," Mateyka said.

"The U. S., while trailing, has gotten religion in this area and we're beginning so to see some really dramatic movement (such as gas filled shocks and air suspension). I think the U. S. will catch up but Japan is ahead and Europe has a strong technology base."

The U. S. is also playing second-fiddle in the development of Final Drive Systems, the Booz-Allen report concluded. Europe in general, but West Germany in particular, lead the world in this category. Audi's 4WD Quattro is a good example, Mateyka said, more sophisticated than U. S. 4WD vehicles. British-based GKN and its subsidiaries still control most of the constant-velocity joint technology.

Despite Subaru, a volume 4WD vehicle builder, Japan still rates third. The Japanese supplier base for the most part remains licensed by GKN.

Said Mateyka: "The U. S. will close the gap (with Europe) but first there will be many new imports (with 4WD) to open the market in the U. S."

Booz Allen rated the U. S. the sole leader in only one area, that of bumpers and crashworthiness. The U. S. industry has built a solid technology base on the subject, largely because of pressure from government regulations.

Here are the Booz Allen & Hamilton findings on the last six categories of vehicle development:

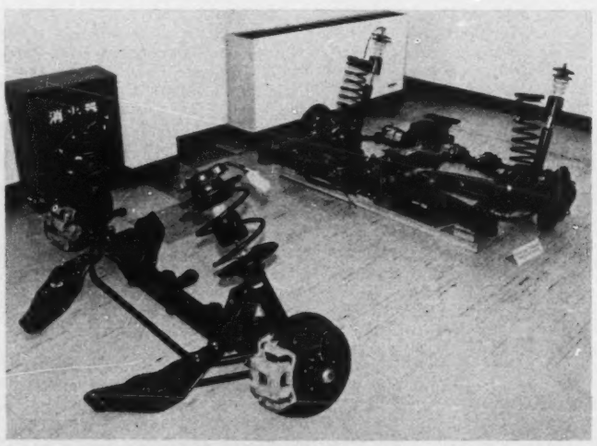
• Body: The U. S. and Japan are seen at parity. Domestic makers have an edge in computer-aided design and in corrosion resistance, while Japan can claim superiority in body-stamping technology (though Booz Allen felt that the GM-Toyota venture might lead to domestic body-stamping improvements). The U. S. is also becoming a world leader in sophisticated steel-frame plastic-body designs such as the Pontiac Fiero.

• Transmissions: "One of the hot areas during the next 10 years," Mateyka said. The U. S. and Germany are equals here, he said. As expected, the U. S. leads in automatic transmission designs, while West Germany has clear superiority with its manual gearboxes.

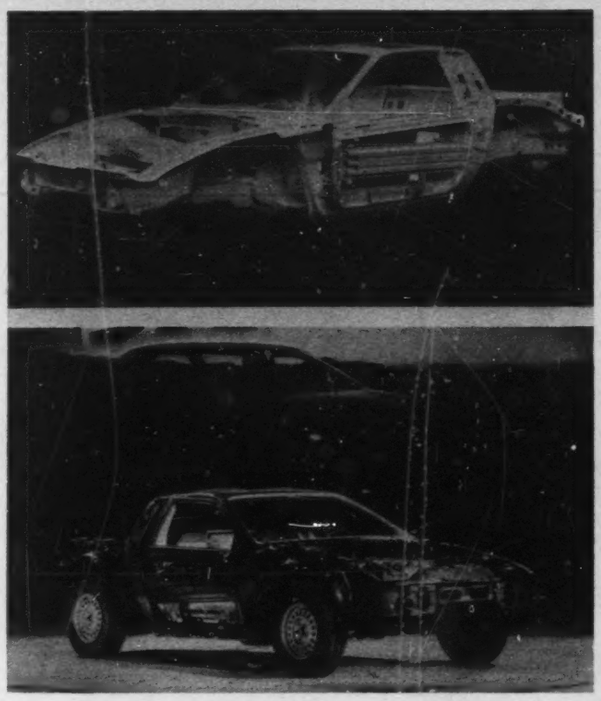
U. S. makers—namely Ford and GM — are experimenting with CVTs (continuously variable transmissions), while West German makers are studying both CVTs and lay-shaft designs. Both are expected in practical use during the mid to late '80s. CVTs are suitable for smaller cars with engines that transmit small amounts of torque. Lay-shaft designs are more suitable for rear-drive performance cars and applications where space is not a prime consideration.

• Brakes: The competition here is among world-class suppliers. The leaders are Bendix and Lucas Girling, according to Booz Allen. The Japanese are followers, licensees for the most

Continued on Page E-4



The Japanese auto industry has taken the lead with its practical applications of modern suspension technology. Shown here is the adjustable suspension of the Nissan 300-ZX.



One reason U.S. auto makers are rated at parity with the Japanese companies in body development is the domestic auto industry's introduction of plastic body/steel frame cars such as Pontiac's Fiero model. The space frame (top) is the structural framework of the car. During production, the space frame, chassis and powertrain are assembled into a driveable chassis (bottom).

Cars such as Audi's new 4000S Quattro, recently introduced in the U.S., give Europeans — notably West Germans — an edge over U.S. auto makers in all-wheel-drive performance cars. A Booz Allen & Hamilton study of world automobile technology recognizes this as a threat to domestic makers.

Spending

Continued from Page E-2

the U. S. market, according to Inland Steel.

A study by Arthur Andersen & Co. predicts the next auto slump could cut the number of U. S. auto suppliers by a quarter.

Suppliers plan to invest 5 percent of their sales in plants and equipment in the 1983-1992 period, according to the study.

But they also plan to reduce the automotive portion of their total sales, Arthur Andersen reports. Today's auto supplier has 30 percent non-automotive sales volume; by 1990, non-auto sales are expected to be 40 percent.

Both suppliers and auto makers believe the makers will bring electronics and powertrain components in-house while outsourcing subassemblies.

Peter Zaglio, auto analyst at Lehman Brothers, thinks auto makers are making a big mistake by not taking advantage of machine toolers' unused capacity.

"They could be buying machine tools for half price right now. Their capital spending has picked up, but not enough for me," he says.

Therein lies a big controversy: Did the U. S. makers really trim their product plans significantly because of financial pinches or did consumer demand for larger cars cause most of the stretchout?

Zaglio and Merrill Lynch's Luckey stand on one side, Goldman Sach's Fricke represents the other. But just as important as how much will be spent is the question of how the companies will spend it. Is flexibility really being built into the plants?

The answer here is clearly yes. The industry's adoption of turbochargers instead of bigger engines is a prime example. Chrysler's multiple adaptations of the K-car is another. And it would have been hard to believe even three years ago that Ford would build Escorts and Crown Victorias on the same line.

Fricke offers yet another example: Chrysler this year will develop 1.8 and 2.5-liter derivatives of its 2.2-liter engine, then go on to turbocharge them. That's flexibility. □

Joint ventures may be path to survival

But it's not a route for the poor or the meek

By Roger Rowand
Engineering Editor

Automotive industry members that survive the competitive years ahead will be those that maximize the effectiveness of capital.

One way the spending of dollars will be made most effective will be through use of joint ventures, a growing number of authorities agree.

That may be a route down which only the more venturous will dare to tread. But guidance and down-to-earth advice are available from at least one executive of a company making the joint venture move.

He is Frank P. Vince, vice president, product strategy and forecasting for Control Data Corp., (CDC) Minneapolis. His remarks came at a seminar for auto executives that was run by the Aluminum Assn. at a Michigan State University graduate study facility in Troy, Mich.

He described CDC's experiences in joint venturing and offered what might be considered a cram how-to-course. Vince is an individual who does not pussyfoot around a topic when it comes to joint ventures.

CDC is a member of Microelectronics & Computer Technology Corp. (MCC), based at the University of Texas in Austin. It was incorporated in August, 1982, with 13 members and now is in its build-up phase.

MCC is developing what Vince calls very basic tools and technology. Its members will take those tools and that technology from MCC and establish products. MCC itself will create no products, Vince said.

Frank Vince says the U.S. could lose its $8 billion favorable trade balance in microelectronics.

He was emphatic in describing the importance of the joint venture. And, while not saying so directly, he left the implication that executives in his automotive managerial audience should consider taking the joint venture route.

"If you don't have your upper management's concurrence — pro-active support—don't do it. Someone will come down the road a year or two later and convince management it wasn't a good idea. That's happened already at MCC.

"Don't get with somebody in a joint venture if you don't have the money to play the game," Vince said.

"The world environment we in electronics find ourselves is one that's similar to a race among members of the microelectronics and computer technology industry.

"It's really a race to stay in the race, to stay up with the leaders whoever they happen to be at any given time. You never have the same leader at all points in time. And, it's a race around the world, not just in the U.S. It's a race with the French, Germans, Japanese, Italians, Canadians and ourselves. And you might want to count the Russians, but they'll wait until the end of the race and steal the trophy. They're in the race but rather tangentally," Vince said.

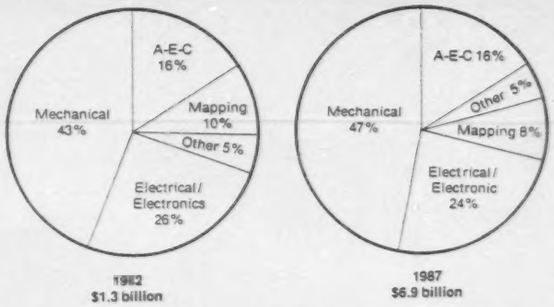
He described several international cooperative working arrangements but said Japan has set a national goal of becoming the world's supplier of microelectronics technology.

"If they win that race, we will depend on the Japanese for microelectronics in practically every product we'll be making in the 1990s and beyond. Today, the U.S. produces $1.5 trillion of products a year which contain microelectronic circuits and technology. That happens to be the just-approved national debt which gives you an idea that it's a fairly good-sized chunk of money.

"In 1965, the U.S. had 55 percent of the microelectronics world market. In 1983 we have 60 percent. It is projected that by 1990 we will be somewhere

Continued on Page E-10

CAD MARKET BY APPLICATION, 1982 & 1987



By 1987 the market for computer-aided-design equipment will total about $6.9 billion, up from $1.3 billion as recently as 1982, according to the Yankee Group.

CAD market capers

Young industry to mature rapidly

BOSTON. — A well-known technology and market analysis firm here says the computer-aided design (CAD) market will reach $6.9 billion by 1987. CAD industry revenues were $1.3 billion in 1982 and the CAD market is expected to grow at 40 percent annually through 1986, the Yankee Group says.

The markets for CAD systems can be grouped into four major categories: Electrical/electronic (including integrated and printed circuits design); mechanical; architectural / engineering/construction (AEC); and mapping.

With development of powerful 32-bit-based work-stations, computer-aided engineering (CAE) has emerged as a rapidly expanding market segment.

"The market is extremely young, and is currently dominated by a growing handful of aggressive start-up companies," according to Glen Allmendinger, a senior analyst with the Group. Like CAD, the CAE market has mechanical and electrical/electronic segments.

Attention in the CAE market, focused on the more recession-proof electronics segment, will switch to the mechanical segment as smokestack industries emerge from the recession and increase capital equipment expenditures.

CAE work-stations will experience explosive growth, coupled with price reductions up to 50 percent over the next five years. Allmendinger says, "We estimate the average cost per CAE workstations will drop to $30,000 by 1987 and that CAE will go from 3 percent to 20 percent of the overall CAD market." □

Suppliers

Continued from Page E-6

switched the location of inventory from auto plants to supplier plants: "We have to make and hold inventory to make sure we have what they need when they need it. Just-in-time is fine as long as everything goes well, but somewhere there has to be some inventory in case of a disaster or problem on the line. It changes the location of inventory, but there also is less. A reasonable amount of inventory is required at some point."

Duane Dunham, marketing manager of Bethlehem Steel Corp., says the automotive industry offers "a lot of opportunity domestically." Bethlehem has spent $60 million to build a new continuous heat-treating line at its Burns Harbor, Ind. facility. The new plant begins operation in January.

The new plant has the capacity to process 600,000 tons of cold-rolled high-strength sheet steel annually. "This is to meet the clearly stated need for reliable uniform mechanical properties," Dunham says.

According to Dunham, the move to just-in-time delivery is difficult in some cases, but not in others. "It's got to be a two-way street to be beneficial. In some cases we do have inventory. You have to plan together," he says.

• Dick Scofield, director of marketing for the Forging Industry Assn., is not quite sure there will be a market boom. "Give us an order. We're starving. We certainly hope there will be a boom," he says.

While 1982 was a poor year for the forging industry, things began to pick up in 1983. "I don't think we'll ever see another 10 million year like in the '70s," says Scofield.

The forging industry has been severely affected by imported cars and purchasing of forgings from overseas. Use of smaller engines (more four and six cylinders) and front-wheel-drive has reduced the need for forgings. Also, increased substitutions of non-metal products have hurt the forgings business.

"The forging industry is extremely well-equipped and ready to handle an increase in the general economy. We hope it is not a dramatic surge. We hope it's a steady build-up. But there is sufficient forging capacity," Scofield says.

The forging industry has seen some expansion over the past 10 years. While individual plants and companies have expanded, there has not been a surge for the entire forging industry, however. "Old equipment is not necessarily bad equipment. Over the past 10 years we have updated, using state of the art automated equipment," Scofield notes.

Looking to the future of forgings, Scofield says, "We've got to sell smarter and they've (auto companies) got to purchase smarter. We've got to make our people more aware of technology and we've got to communicate better."

Scofield says auto makers lost contact with the market over the past decade. "GM, Ford and Chrysler have made a comeback. They have new products and better quality."

At Thermofil in Brighton, Mich., Walt Maruszczak, technical service representative says, "We predict (automotive) growth for the next two years will be tremendous." He bases his prediction on the increased use of plastics, and cites the new Pontiac Fiero with plastic exterior body panels as a prime example.

"There will be a boom through '84, but it may peak out in '85. In '85, sales may be hurting once again," Maruszczak predicts.

Thermofil, a supplier of injection molding extrusions and reinforced thermo-plastic connectors, has modernized its plants and equipment to meet the expected boom. The company recently purchased a new 250,000 square-foot facility near its headquarters in Brighton. Another facility is located at Santa Ana, Calif. "We are located strategically to meet the market places on the east and west coasts," Maruszczak says.

Thermofil will broaden its materials lines for further applications and utilize the most sophisticated extrusions. "We're one of the largest thermoplastic manufacturers in the country," he says.

• Last September, at the annual meeting of the American Die Casting Institute, president Peter Findlay said he was cautiously optimistic about the future. By year-end the picture looked much brighter. "It's been a good 12 months. There's been a definite turnaround and 1984 looks encouraging. Some companies are at an all-time high and 1983 could be the best year for some," Findlay says.

Findlay, whose association represents 260 companies including custom die casters and suppliers, notes, "During 1982 there was quite a lot of new tool building. It's still continuing and more new tooling orders are coming in."

Findlay says today's die-casting buyer is more demanding in terms of quality, delivery and service compared with a decade ago. "We've moved from a seller's market to a buyer's market. It is very competitive and the competition overseas has played a part in the competition," he says.

Findlay adds, "One increasing influence during the year has been the growth of imported die-castings as components, as sub-assemblies and as parts of finished consumer products. This growth reduces potential domestic markets for die casting. This is of concern not only to die castings, but to domestic metal suppliers."

The answer to the problem, according to Findlay, is "diversification into new markets, probably involving high-tech products and subsequent machining and assembly operations and a broader range of alloys which offer improved physical and mechanical properties. These are the types of products which will tend to be less vulnerable to overseas competition."

He also says tooling now is used for up to three years, unlike previously when the auto companies made annual changes. This indirectly improves quality and makes economic sense, he notes.

Findlay says, "The auto industry had to face up to very strong competition from overseas products and a very loud and clear message from consumers for smaller, efficient, more utilitarian products, and to keep the sticker price down.

Fernley Alofs of Grand Rapids, Mich., says his company, Alofs Manufacturing, is prepared for a market boom. The company has made two expansions at its plant during the past three years, adding 30 percent more space to its 10,000 square-foot facility.

Alofs, a family-owned business celebrating its 60th year in 1984, produces stampings and assemblies including shift mechanisms and brackets. It has also entered a new market — copper brazing — producing brazing joints.

Alofs says, "We expanded our facility three years ago and wondered at the time if it was a mistake. But now we're ready. We're looking to expand equipment and floor space again."

Alofs is cautiously optimistic about the future, questioning how long the boom will last: "We are building a better car today and there is a pent-up demand. We may have a surge here for a year or a year and a half, then it will level off."

Alofs says GM expects more from suppliers with stringent requirements in quality and delivery. Alofs' computers are tied directly into GM for scheduling and inventory control. "We're going to see more of this. This is just one step to speeding up the process of ordering and delivery," he says.

The company also utilizes statistical quality control. Alofs says, "This is a big challenge for everybody. It's fairly new and a lot of people don't understand it. It'll take time to see the overall effects." □

Tire industry will strain to meet demand

Goodyear chairman says it will be pushed to capacity in '84

The new car buying spree expected to continue into 1984 should reverse a 10-year trend toward older cars on American roads and contribute to the best U. S. autc tire sales year since 1979, according to the chief executive of the world's largest tiremaker.

"U. S. auto makers are expected to produce about 7.3 million autos in 1984, after building a respectable 6.80 million autos in 1983, and this infusion of new blood to the U. S. auto fleet could reduce the average auto's age to about 7 years," says Goodyear chairman Robert E. Mercer.

The average age of U. S. autos in use steadily increased from 5.7 years in 1973 to 7.2 years in 1983, as Americans put the brakes on the frequency of buying autos.

"Now consumer confidence is back in the U. S. and this confidence is reflected in auto showrooms and in miles being chalked up on the highways," Mercer says.

"A slimmed-down tire industry will have to push its capacity in 1984 to meet the expected total demand for 187 million auto tires, including 4 million exports — the largest requirement for tires in five years," Mercer says. "This would represent an increase of more than 2 percent above the 183.2 million auto tires sold in 1983."

In 1984 demand for original equipment tires could increase 5 percent to approximately 47 million auto tires from 44.7 million tires in 1983, Mercer says.

In contrast, expected demand for replacement auto tire sales will remain relatively flat in 1984 at 136 million tires versus 135 million tires sold in 1983, he says.

It is expected that the replacement market, currently up to 70 percent radials, will remain a slow growth area as radialization continues to 75 percent in 1984 and tops out at 90 percent by 1990, he says.

"Motorists are driving more miles as the economy improves and as fuel costs remain stable and in good supply," Mercer says. "In 1983 miles driven per registered vehicle should total 9,382; reach 9,471 miles in 1984 and climb to 9,800 miles by 1988."

Government figures indicate U. S. motorists will drive 1.170 trillion miles in 1983 and increase this mileage at an average annual rate of 2.5 percent over the next five years to 1.325 trillion miles in 1988.

Goodyear's chairman says the truck manufacturing recovery has lagged behind autos, but now it is gathering steam spurred by the 1982 Surface Transportation Assistance Act.

"With this piece of deregulation, we are seeing major fleet operators begin to make purchases of new equipment as they restructure their fleets, which will increase demand for truck tires, radial in particular," Mercer says.

An increase of 10 percent in total U. S. truck sales is expected in 1984 to 3.3 million compared with 3.0 million trucks in 1983, he says.

The Goodyear chairman says this will bring the market for original equipment truck tires in 1984 up to 5.7 million compared with 5.2 million truck tires in 1983. In the truck tire replacement market, demand should increase slightly to 29.9 million tires from 29.6 million tires a year ago, he says.

Discussing tire imports, Mercer says that as long as the dollar remains strong, the U. S. will be a prime target for imports. According to Dept. of Commerce figures, 22 percent of radials sold in the U. S. replacement market this year were imported.

Goodyear also imports tires to counter foreign competition, and recently introduced a domestically made radial tire called the G Metric as an "import fighter" for the growing U. S. import car replacement tire market.

Another phenomenon involving foreign competition Mercer sees is the "strange bedfellow" relationship developing whereby many major U. S. tire producers have entered into joint ventures with foreign tire makers. He cites the sale by Firestone of its truck tire plant in Tennessee to Japan's Bridgestone which now is making Firestone brand tires.

Discussing Goodyear, Mercer says the company's domestic and foreign operations shipped more tires in 1983 than in 1982, despite depressed economies in several parts of the world. Market share gains in several tire lines are responsible for this performance, he says.

The U. S. recovery is taking longer than expected to spread overseas, he says, and there will be only a few bright spots in the rest of the world economies during 1984.

"In the U. S., auto companies have introduced more high performance cars to their 1984 model lines than in anytime in the industry's history," Mercer says.

In the replacement tire market, higher performance tires in 1984 will represent 12.5 percent of the total market, he says.

On supplying the increasing tire demand, Mercer says Goodyear is committed to meeting both the tire market and its distribution network needs for 1984 and beyond with a strategy

Expanding electronics role

Drivetrain controls will spark growth

Regardless of the direction taken by U. S. car sales in 1984, Detroit's emphasis on high-tech cars featuring computerized controls will jump the market for non-entertainment automotive electronic devices from $1.06 billion in 1982 to $4.6 billion in 1988 (in constant dollars), says a new study by Frost & Sullivan.

The report divides the market into five distinct categories: Comfort and convenience items, safety and security devices, instruments and displays, drivetrain controls and electrical components.

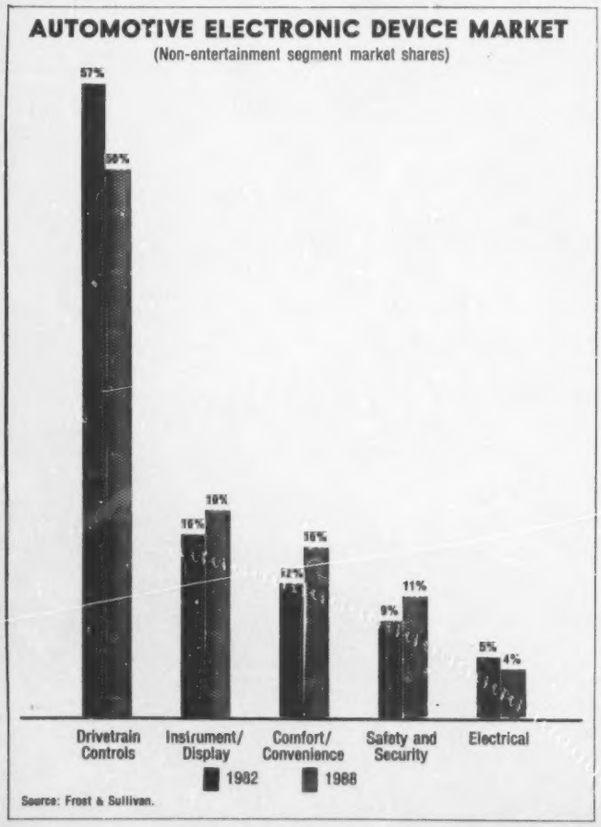
The rising use of electronic fuel injection systems — which allow for accurate and consistent fuel delivery, fuel economy, and increased power—will help the drivetrain control segment to dominate the auto electronics market, growing from $600 million in 1982 to a market worth some $2.3 billion in 1988, a 50 percent share of the total market. (All figures are for electronics used in U. S.-made cars only.)

With developments in instrument clusters and LCDs, and with new applications in road maps and large area displays, F&S predicts considerable growth in the instruments and displays category. Annual volume is projected to grow from $170 million in 1982 to $875 million in 1988. LEDs are already being used extensively.

Substantial growth in electronics for climate control, skid control, traction and braking, active suspension and load leveling, and steering control, along with the move toward providing "big car rides" on small cars, will help the convenience and comfort segment and the safety and security segment to achieve growth. New products in these two categories, including "memory seats," service interval reminders, voice-actuated power windows, automatic day/night rear view mirrors and remote control door locking systems, will result in over 30 percent average annual growth for both categories over the forecast period.

The expanding role played by the microprocessor, particularly in engine controls, will help the electronic components segment to rise from $55 million sales in 1982 to $195 million in 1988, due largely to the increased use of across-the-board engine control computers.

Cellular mobile phone volume is expected to become significant in 1984, accounting for $80 million in sales based on 40,000 installations at a purchase price of $2,000 each; the 1988 market, with 800,000 subscribers paying an estimated $750 each for the equipment, will be worth $600 million dollars. □



Joint ventures

Continued from Page E-8

in the 30 percent range if we stay on the track we're on."

That's not terribly healthy for the security of the U. S. It speaks a lot though for the international competitive nature of Europe and Japan.

"We have today, $8 billion of favorable trade, a balance from microelectronics. We could easily lose that in a couple years by just sitting back on our laurels," he said.

He said research projects in microelectronics are extremely expensive. One example: "IBM just announced it terminated an R&D program that cost them $120 million. That was $120 million flushed because they went down a dead end. Even IBM doesn't have the resources to do that sort of thing very often," Vince said.

"Those of use in MCC don't have the resources of our own to do one of those, much less three or four. We have to get together to pool our resources.

"The costs of those programs are extremely high. The people to work on them are rare. You don't have people with those skills walking around looking for a job. They have four or five jobs waiting for them if they quit the one they have, he said.

The dearth of capital and that scarcity of skilled people add up to one thing, in Vince's opinion. "You have to get together."

The last element in the equation is a desire for return on investment. "Greed works into it. If CDC can put a dollar into a joint venture and get $8 worth of R&D for it, why not? And if we can do it, the other partners can do it. Pure, unadulterated leverage is the name of the game," he said.

There are inhibitors in the path of cooperation, and Vince listed some he has encountered in working with engineers.

His list includes the ever-present "not-invented-here" syndrome. "Also, many engineers were brought up believing if you don't have to cooperate, don't, if you can possibly get out of it. And there are a lot of cases of 'I don't want to cooperate because I can do the job better'," he said.

"The other one is that it is just too damn much work to cooperate. You have to be friendly with your competitors. You have to smile and be nice when you don't feel like it," he said.

Another problem is transferring the technology into the company from the outside. That's a major problem. You have problems transferring technology from one division to another, can you imagine what kind of problems you'd have transferring it from the outside in? But we will get over these barriers, or we will lose the race," he said.

Mention of competitors naturally brings up the subject of the Justice Department and its trust busters and trust preventers. Vince gave his audience a look at how MCC has steered clear of antitrust pitfalls.

The key, he said, is the fact the co-op venture will not make any products and will have only tools and technology as its output. It will make a profit. Too, he said, its work will help the U. S. preserve its market position worldwide, a premise apparently not lost on the bureaucrats.

"Now, of course, before you can get some profit out of the technology you discovered, you must have a little seed money. We expect seed money to flow for at least four or five years, but MCC is organized to license the technology back to the member companies and non-MCC companies, but after a waiting period, which will vary by program."

MCC members must be U. S.-owned companies. A major share of their stockholders must be U. S. citizens, and they must be engaged in microelectronics research: "There aren't too many companies under those rules that might not qualify. We do have 13 member companies and they are primarily in electronics and computer technology."

MCC's programs are computer aided design and manufacture, the next generation computer, artificial intelligence, electronic chip packaging and software technology.

"There is no question that the justice department is going to be watching us. We have an attorney at every meeting, that two competitors get into. He may not know a thing we're talking about, but he's taking notes furiously that we're not price-fixing, or market sharing. That's the way the world's built, that's what we have to do. Pretty soon he'll be transferring to the technical area, for all the conversations he's heard," Vince said.

"The Justice Department has given the green light for formulation, and we're off and running. However, Justice has said, 'We reserve the right to take a look at each one of those programs and see if we like it, from a societal point of view, competitive and uncompetitive point of view.' So far, they haven't made any noise about it and we don't expect them to." □

Witnesses half a century of industry changes

50 years of auto shows for Orloff

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES.—As the automobile has grown to become an integral part of American life, so has the annual rite of the auto show, the traditional winter/spring exposition of new models that gets the winter-bound thinking of that new car.

While the idea of the show — getting buyers motivated — has changed little, the presentation of vehicles and the vehicles themselves have changed dramatically over the years.

Perhaps one of the best witnesses of these changes is Benjamin Orloff, general manager of the Greater Los Angeles Auto Show, who this year marked his 50th anniversary in the business.

When Orloff began in Chicago in 1934, it was just after the Chicago Auto Trade Assn. took over the local auto show from the manufacturers.

"Back in those days, there were two national shows put on by the manufacturers — New York and Chicago," Orloff said. "The Chicago show was in the old Coliseum and maybe the whole thing, if I had to guess, covered about 70,000 to 80,000 square feet."

Orloff, who was a student at the University of Chicago at the time, first worked on the official program of the show part-time. "It was just kind of a progression, they kind of took a liking to me," he said.

"There was this old gentleman who handled publicity," Orloff said. "His name was Walter Birmingham. He was one of the old-time newspaper guys with the hat on and a cigaret in his mouth. He kind of liked me.

"Then I started to do a few more chores, like delivering tickets and posters for him. When the show started, I was part of the organization."

During the Depression years, Orloff said, the new-car announcements and shows were after the first of the year.

"One year, and I don't know what year it was, we had two shows in one year. President Roosevelt thought that he'd like to have the workers have a little more money for Christmas, so he asked the industry to have fall announcements. So, that year, we had one in January and one in the fall."

The Chicago show began to grow in size and eventually moved from the Coliseum. "Later on, the International Amphitheater was built and we moved there. That gave us a lot of space.

"The Chicago show was big and recognized and became an extravaganza," Orloff said. The exhibits were becoming more elaborate as well. "In the beginning, they would have a room with some flower pots around—that's what the whole deal was. Then the exhibits began to have turntables."

Then came World War II and five years of no new cars and a decade of no auto shows.

"There were no shows during that period," Orloff recalled. "Then after the war, it was 1950 or '51, the shows started and they asked me to come back."

Although car sales resumed following the war, Orloff said it wasn't until the late 1940s that people started talking about having shows again and then it took a year or two to plan before the Chicago show was resumed.

When he returned to the business, Orloff started the show publication and handled the allied exhibits, such as parts suppliers.

"In the early shows, parts were pretty good," Orloff said. "You know, back in those days, when I bought a new car, they would take the radio and heater out of my car and put it in my new one." As a result, parts vendors had a great deal of interest in reaching the public at these shows.

The handling of the allied exhibits led into another new area for Orloff during the late 1950s and early 1960s—imports.

"It was something exotic, something new—you started to have a lot of different makes and the shows got larger," he said. "I remember we had British Motor Cars (BMC) and they handled MG, Triumph, Rover and Jaguar.

"Then there was this Rootes Group and they had Riley and four or five other numbers. Then we had cars like the Messerschmit, the Skoda, Lloyd and several others."

Orloff recalled that some of the import companies did not understand how things worked in this country when it came to getting into auto shows.

"When the imports started, I got a call from New York and a fella said he was calling for Lord Rootes. It was about two or three weeks before the show and the fella said he wanted space for our show. I said we didn't have it and he said, 'But this is for Lord Rootes.'

"I said if it was the Pope, I couldn't do anything. He was just amazed that I couldn't handle it. So I said, 'I'll take Lord Rootes if you know where I can get wall stretchers. If I get wall stretchers, then I'll put him in.'"

Orloff said the next year he was able to get the Rootes Group in the show.

"Then the domestics started bringing in their own imports," Orloff said. "Buick had Opel and Pontiac brought in Vauxhall."

Some import displays were impressive. "I remember the first Toyota exhibit. It was a Japanese garden—very beautiful, very Oriental."

Orloff stayed with the Chicago show until the early 1970s, working as exhibit sales manager. In the mid-1970s, he consulted with other shows around the country, helping the Miami dealers start their show, reviving the Cleveland show and consulting in St. Louis, Cincinnati and Kansas City.

He followed his children out to California and worked with the Los Angeles Motor Car Dealers Assn. and their show. Seven years ago, he became the show's general manager.

Despite all the changes, Orloff said he's had no realization that half a century has passed since his start in the business. "Until this 50th year, I never realized age," Orloff confessed.

"You know, if you think of the old biplane or Ford Trimotor to the advanced jet, that's exactly what I've seen in the industry," Orloff said.

"I've seen progress from a sociological standpoint with the car becoming so much a part of our life. I've seen the transition of American life through my experience with the auto show. Not only American life, but the experience of global life."

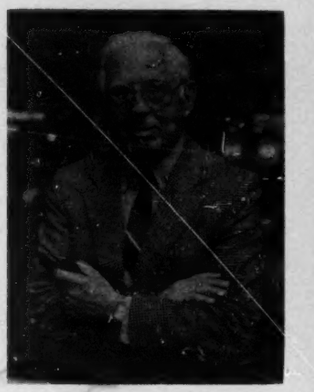
The automobile, Orloff said, represents the best technology that a country has to offer and it is through the auto that all countries have become aware of what is going on elsewhere in the world.

"The auto industry has made us cognizant," he said. "We live in a world where we're aware of all world activities and we're involved in world activities. The automobile industry has been quite a communication conduit."

This year, in recognition of Orloff reaching his personal milestone, the Los Angeles Motor Car Dealers Assn. honored him at its annual luncheon before the show.

Orloff said he was grateful, and added, "Somebody asked me when I'm going to quit. I said, 'You know when I'll quit? When I can't improve. When I think I can't add anything. Then I'll quit.'"

Given Orloff's enthusiasm for this year's show, it appears he'll be around for some time to come.



A golden year

Benjamin Orloff, general manager of the Greater Los Angeles Auto Show, marks his 50th anniversary in the business this year.

Merrill goes Peugeot

OKLAHOMA CITY, Okla. — Clyde R. Merrill, Prop., has been awarded a Peugeot franchise. The dealership, renamed Peugeot of Oklahoma City, has been owned and operated by Clyde R. Merrill since 1948.

Ford Topaz gets a big sendoff in Mexican market

MEXICO CITY. — Following up its unveiling of the 1984 Ford Topaz, Ford Motor Co. of Mexico has launched a major advertising campaign, using newspaper and magazine space and television and radio spots in an unprecedented use of paid space.

Media, banking and business celebrities were invited to inspect the Topaz, stressed as "the car of the future for today's needs." The model is the first auto in the Mexican market featuring Ford's traditional image.

The special unveiling presentation included a spectacular show (produced by Mundo Audiovisual) where live dancers and space ships surrounded the Topaz car. Latest audio visual techniques and laser technology were featured at the show, which also had a diversified display of Ford's full line of cars and trucks.

Ford also sponsored the first television special featuring Ann Margret, Bob Hope, George Burns and Playboy Bunnies to introduce the Topaz to the national television audience. Key spots were on the theme, "It is difficult to believe an auto like the Topaz exists."

Cooperative attitude important, UAW's Ephlin says

Bargaining goal: Keep spirit of '82

By Marjorie Sorge
Labor Editor

The real challenge in this year's contract talks with the Big Two auto makers will be for both sides to continue bargaining in the new cooperative, problem-solving roles established in the 1982 talks, according to a UAW vice president.

Donald F. Ephlin, also director of the union's General Motors department, told the Engineering Society of Detroit last week that outsourcing and job security will be the major union issues in the talks but that the underlying attitude at the table is just as important.

"All of us in the labor end of the business have new and different responsibilities that we never had before," he said. "Because instead of being defense attorneys and trying to justify the way things were, now all of us have the task of finding a better way together.

"We have a tremendous responsibility together this year because we did so well (working together) in 1982 (contract bargaining). We started off in a new direction.

"The decision we have to make this year is are we going to progress together along the lines where we made a good beginning or are we going to join the rest of the packs in this country and just throw up our hands and blame each other for the problems. I have no interest in doing that and fortunately I don't think most of the people we bargain with do either."

Many labor observers believe that the 1984 talks will be the test to see if the two sides can continue to solve problems together, especially in light of the profits of the Big Two for 1983 and the indication that both Ford and GM would like to see restraint in bargaining this year.

Ford is expected to report net income of around $1.7 billion for 1983, while GM could report about $3.66 billion.

In 1982, the companies and the UAW made concessions to improve the auto industry's competitiveness especially in light of the heavy import sales penetration.

While job security and outsourcing issues will be foremost in the negotiations, Ephlin said money will also be discussed as part of the traditional bargaining. But he said, "I don't worry about money, that's the easiest thing to bargain for."

But Ephlin made it clear bargaining would not be only a "giving" session. "People who say it is better to give than receive have never been involved in collective bargaining," he said. "We like it better the other way."

He also said the adversarial relationship would still be present because that's the role required by law and tradition. But, he said, even with the adversarial relationship the job is the same for both sides—"solve the problems and get the job done."

Ephlin also criticized the U. S. Government for not taking a stronger stand on maintaining the steel and auto industries in this country. He said there has never been a meaningful meeting between labor, management and government to solve the problems and called this "scary" and "shameful."

Questioned after his speech about the effect of the GM reorganization announcement on the UAW, Ephlin said it would have no immediate effect but that the union now expects more uniform treatment of its members.

"I think we have some pluses," he said. "(GM needs) one labor relations policy applied in all plants, in all the divisions."

And, he said, since the reorganization will eventually eliminate some of the divisions from bargaining, "now I only have to worry about two instead of eight getting off course."

Stempel keynotes N. J. dealers' convention

Robert J. Maguire, left, 1983 chairman of the board of the New Jersey Automobile Dealers Assn., and Ronald Miller, right, the group's 1984 chairman, welcome Robert Stempel, then Chevrolet general manager, to the group's convention in Boca Raton, Fla. Stempel, who was the keynote speaker at the event, has since been named group executive, Chevrolet-Pontiac-GM Canada Group. Maguire is president of Bob Maguire Chevrolet, Inc., Bordentown, N. J., and Miller heads Miller Cadillac-Pontiac, Rahway, N. J.

ta, 41; Dodge Colt, 65; Plymouth Colt, 73; Plymouth Conquest, 122, and Dodge Conquest, 128.

West-German-made cars in stock Jan. 1 totaled 53,288, a 48-day supply, compared with 51,750 a month earlier, a 49-day stock.

German nameplates and their Jan. 1 days-supply figures were: Porsche, 17; Mercedes-Benz, 26; Audi, 29; BMW, 56, and Volkswagen, 82. VWoA also had an 86-day supply of U. S.-built Rabbits.

Days-supply figures of other European lines included: Jaguar, 15; Saab, 36; Alfa Romeo, 36; Peugeot, 52; Volvo, 71, and Renault, 84.

Days-supply figures for imported pickup trucks Dec. 1 were: Mazda, 21; Toyota, 39; Isuzu, 52; Nissan, 67; Mitsubishi, 82, and Chrysler Corp./Mitsubishi, 98.

They challenge EPA on heavy-duty and light-truck engines

GM, AMC want 'useful life' review

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — EPA is being challenged by General Motors and American Motors on "useful life" provisions affecting heavy-duty and light-truck engines.

Both makers have filed petitions in appellate court asking for court review. In addition, AMC has asked EPA to reconsider its November ruling affecting all its four-wheel-drive vehicles.

GM has warned EPA Chief William D. Ruckelshaus that when it completes its laboratory and field test programs "sometime this year," it expects to challenge "useful life" for both HD engines and light-duty trucks along with hydrocarbon and carbon monoxide emissions for HD gasoline engines.

The EPA regulation — challenged at the last possible legal moment — is in effect. The Ann Arbor (Mich.) lab is certifying HD vehicles and engines (both gasoline and diesel) for the '85-model year.

While the rule was sufficiently controversial to be vulnerable to suit either by the industry or by environmentalists, it appeared safe just a few weeks ago.

Now that two companies have made the move, however, others may well become intervenors. The move to petition EPA as well as seek court review is viewed as a possible way to expedite matters even though GM does not yet have its data together.

Although GM's challenge is both last-minute and non-specific — without even a hint of approximately when its data will become available — it says its unusual "hold it and we'll tell you later" petition is "fair and reasonable" in view of EPA's own "late publication" of the final rule last November.

So far, however, there is no effect on current certification of engines for '85 vehicles at Ann Arbor.

AMC said EPA exceeded its authority when it set "useful life" for light-duty trucks at 11 years/120,000 miles. AMC insisted during the rulemaking period that trucks under 6,000 pounds GVW have a maximum useful life of 5 years/50,000 miles and it will not therefore petition on the same arguments.

Instead, AMC uses alternative arguments to ask for relief. AMC said the definition should not apply to AMC until EPA has shown its feasibility for light trucks, nor should it apply to AMC's 4WD vehicles because of the "unique" problem of predicting durability of such vehicles.

AMC said EPA could phase in the longer useful life period for the company in smaller increments over a period of time.

Kenneth W. Schang, AMC director of vehicle environmental and safety affairs, told Ruckelshaus: "Because of the need to develop 'real time' data on the effects of aging, single-year extensions of useful life should be phased-in no faster than one year at a time."

Regardless of how EPA treats AMC's other requests, AMC said EPA should at least retain the 5/50 standard for the '85 model year on grounds of allowing adequate leadtime.

In its petition to EPA, AMC argued its "special" needs—its size, its dependence on suppliers for emission control technology and its special lack of resources and leadtime to speed up development of data on in-use durability.

In addition, AMC said, a recent appellate court decision dealing with recall liability — won by GM although not a clearcut victory — means Congress did not intend "useful life" to be the same as actual road life.

Sales open year with 32-pct. gain

Continued from Page 1

high of 7,651 chalked up in 1979. Cadillac was up 73.82 percent over 4,393 a year ago. Pontiac boasted a 61.16-percent sales increase, Chevrolet was up 8.32 percent, Buick was up 46.76 percent and Oldsmobile was up 9.12 percent.

Olds sales surpassed those of Ford by some 2,500 units as the GM division sought to fulfill its goal of becoming the second-best-selling make, behind perennial front-runner, Chevrolet.

It's battle all day whether lost or half-won,
For the man who is taking a used car in trade
Is quite apt to give to his prospect a shade.

At last I state clearly just how I will deal,
There's a gasp of astonishment, look of appeal,
"Why, man, you are joking. You don't mean to say
For my auto that's all you are willing to pay.

"In the very next block a firm offered me
Almost twice as much more and one tire free,
They'd throw in a bumper, a spotlight and lock
And I think, by insisting, they'd give me a clock.

"The trouble is you haven't honestly weighed
The worth of my car, you are taking in trade,
Why, look in the Blue Book which tells you the story
And place my good car in the same category."

We continue to argue and gesture and scold,
I talk of my new car, he praises his old,
And by warping my judgment and better sense too,
He sells me his old car, and then buys my new.

The old car is painted, retired, rebored,
I found on inspection the cylinders scored,
We insured it and stored it and paid all the bills,
(This deal and some others quite gave me the chills).

We paid a commission for finally selling,
It was high time, for our losses were swelling,
But we'd sold a new car — had conquered our goal,
Our factory was happy, but we're in the hole.

Now this is the story of many a trade,
Of many transactions much better not made,
We sign off and swear of "it's wrong, does not pay,"
And do it all over again the next day.

Staff and the Personnel Organization Staff.

David N. McCammon, 49, succeeds Gilmour as vice president - controller. McCammon's replacement as head of the Corporate Strategy and Analysis Staff will be announced later.

Gilmour joined Ford in 1960 as a financial analyst. He was elected president of Ford Motor Credit Co. in 1975 and was named executive director of corporate and North American analysis for the company's Finance Staff in 1977. He was elected a company vice president and named controller in 1979.

McCammon joined Ford's Finance Staff in 1957 as a systems analyst. He served as Ford Division controller and in other finance posts and was elected a company vice president and placed in charge of the Corporate Strategy and Analysis Staff in 1979.

Makers schedule 164,396 cars

Week's auto output climbs 9 pct.

By Mary Beth Mayer
Staff Writer

With 13 domestic auto assembly facilities working extra hours last week, U. S. auto makers slated production of 164,396 units, a 9.58 percent gain over the prior week's output of 150,035.

Last week's total leads the 116,615 units produced in the year-ago week by 40.98 percent.

The cumulative three-week total for 1984 reached 449,528, up 34.61 percent from 293,982 built in the comparable period last year.

Breakdown for the week by company was: General Motors, 60.08 percent; Ford Motor Co., 20.73 percent; Chrysler Corp., 13.47 percent; American Motors, 2.92 percent; Volkswagen of America, 1.43 percent, and Honda, 1.37 percent.

Working two shifts on Saturday (Jan. 21) at GM were: Arlington (Tex.), Doraville (Ga.), Fairfax (Kans.), Flint (B-D and G lines), Linden (N. J.) and Van Nuys (Calif.).

Three Ford facilities put in extra daily hours. They were: Atlanta, Dearborn and St. Louis. This week, Atlanta, Chicago, Edison (N. J.), St. Louis and Wayne (Mich.) are on daily overtime.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 put in two daily 9-hour shifts. Jefferson (Detroit) worked two daily 8½-hour shifts and St. Louis No. 2 operated two regular 8-hour daily shifts. Jefferson worked two 8-hour shifts Saturday as well.

This week, Chrysler plans to follow the same daily overtime schedule.

DeLorean affair in UK still alive and kicking

By Richard Feast
European Editor

LONDON. — The cool $119 million tax demand slapped on Group Lotus by Inland Revenue is an indication that the DeLorean affair is still alive and kicking in the UK, too.

The amount is clearly unrealistic—at least 10 times the profits made by the group in its entire history and more than four times its current market value.

What Inland Revenue really wants to know is the whereabouts of the $17.6 million paid by UK Government agencies and U. S. investors for the development of the DeLorean sports car by Lotus.

Sir Kenneth Cork, the DeLorean receiver, told the House of Commons Public Accounts Committee recently that the money "went walkabout."

Lotus immediately lodged an appeal against the tax demand. According to Chairman David Wickens, Group Lotus has no tax liability.

But the Inland Revenue inquiry has resulted in the suspension from duty of Deputy Chairman and Chief Executive Fred Bushell.

Bushell, long-time financial adviser to Colin Chapman, became chairman when Chapman died unexpectedly in December, 1982. Following the financial aid package put together for the group by British Car Auctions (BCA), Toyota and others, Bushell passed the chairman's seat to Wickens, BCA head.

Mike Kimberley, managing director, is to become chief executive, while other members of the Lotus Board including Wickens and Alan Curtis will spend more time at the Lotus HQ.

Bushell was apparently approached by Inland Revenue in its inquiries about the missing $17.6 million. It is believed that his lack of cooperation has led to the present huge tax demand.

The missing money puzzles U. S. tax authorities, the Royal Ulster Constabulary and the British Public Accounts Committee as well. It is the sum paid by U. S. and UK interests into the Swiss-based, Panama-registered company GPD Services. The $17.6 million never reached Lotus.

Meanwhile, in Detroit, a bid to sell John DeLorean's Logan Mfg. Co., a Utah-based manufacturer of snow-grooming equipment, was blocked in Federal Bankruptcy Court.

The judge said that a Logan company attorney failed to comply with an order to detail the proposed transaction. Logan is seen as an asset of the defunct DeLorean Motor Car Co. and its sale is subject to court approval.

The proposed purchaser of Logan is Pacific International Equipment, Inc., which is reported to be controlled by Roy Nesseth, longtime friend and business associate of DeLorean.

Truck production slips for week, but tops 1982

Truck output last week dropped slightly from the level of the previous week.

The truck makers targeted production of 59,652 units, trailing the 61,317 assembled the prior week by 2.72 percent. However, last week's tally leads the year-ago week's output of 33,279 by 79.25 percent.

During the first three weeks of assembly this year, the manufacturers produced 167,444 trucks, more than double the 83,194 finished in the same period in 1983.

Nine truck assembly facilities put in extra hours last week, down from 10 plants working overtime the week before.

At General Motors, St. Louis worked two shifts Saturday (Jan. 21) while the Detroit point put in one shift that day.

Production of medium-duty trucks at GM's Pontiac point, already on two-shift operations, will be increased 36 units to 212 trucks a day, effective today (Jan. 23). The increase will require about 80 additional employes.

Ford Motor Co. scheduled extra daily hours at all six of its truck plants. This week, Ford plans the same overtime schedule.

Last week, Nissan Motor Mfg. Co.'s Smyrna (Tenn.) plant began working 9-hour days for three months. The plant is also scheduled to work Saturdays on Jan. 28, Feb. 18 and March 3.

Canadians boost auto output to 22,736 for week

Canadian auto makers slated production of 22,736 units last week, 20.61 percent ahead of the prior week's 18,851, and 30.46 percent better than 17,428 assembled in the year-ago period.

So far this year, the manufacturers have built 59,084 autos, leading the 1983 tally of 49,065 at this time by 20.42 percent.

Truck output last week was targeted at 14,611, up slightly from 14,435 units assembled in the previous week, and 45.52 percent more than the 10,041 that were completed in the year-ago week.

Year-to-date, truck production stands at 41,257, a solid 76.23 percent ahead of 23,412 units which were assembled in the first three weeks of 1983.

Chrysler Corp. estimated production of 1,204 Dodge Caravans and 1,062 Plymouth Voyagers at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 6,485.

GM studies U.S. assembly of Isuzu, McDonald says

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — General Motors is studying the possibility of assembling Isuzu cars in the U. S. as well as importing small cars from Korea, F. James McDonald, GM president, said here last week.

McDonald, who was in Los Angeles to accept Motor Trend's Man of the Year award for himself and GM Chairman Roger Smith, said GM's Japanese strategy of importing cars is to buy time until the company's Saturn small-car project is finished.

Saturn, as GM's top execs have said, is a "no-year" car, in that no definitive timetable has been set on the vehicle's introduction.

"We want to have some 'reach' in this project," McDonald said referring to the advancements in small-car technology the corporation expects from Saturn.

"Meanwhile, we have a responsibility to provide cars that are competitive at the low end of the market." He estimated that GM needs about one million units to satisfy that need, hence the Far East strategy.

• However, the fourth year of import restraints leveled by the Japanese government is putting a crimp in those plans.

Japan's Ministry of International Trade and Industry limited GM to 50,000 vehicles under the new allotment, which has moved from 1.68 million to 1.85 million units for the fourth year.

Under the quota, GM will bring in about 33,000 Isuzu and 17,000 Susuki small cars. American Isuzu, which has been limited to 17,000 cars, does not appear to be getting any more vehicles because MITI has set the Isuzu limit at 50,000.

The U. S. unit of the Japanese auto maker had no comment. GM owns 34 percent of Isuzu of Japan.

Although disappointed, McDonald said GM plans to bring in what it can under MITI's allotment. "I don't think the direction is to back out," he said. "We're waiting for Chevrolet to come up with a recommendation" on distribution.

Asked about the possibility of assembling CKD kits in the U. S., McDonald replied, "we're certainly studying that," but quickly added that the decision to go that route does not hinge solely on the question of import restraints.

"The potential (for assembly) has to do with Chevrolet and its distributution," he said. He said it would take about two years to establish that capability in the U. S.

As for selling a Korean car here, McDonald said GM's partner in that country, Daewoo, is currently studying a small car to compete in that market. GM owns 50 percent of Daewoo.

"We're working with Daewoo.

Stretching the 500-SEL

Long limo for $125,000

A U. S. distributor for Le Marquis Coachbuilding Co. of England, Arabella Car Corp., Wyckoff, N. J., is marketing the Arabella Le Marquis Limousine, based on a Mercedes-Benz 500-SEL which is stretched either 36 or 42 inches. The company said a Mercedes-Benz door with handles is used in the center section to "eliminate the stretched look." The 36-inch conversion is $125,493, while the longer version is listed at $129,635.

GM-Toyota deal faces scrutiny in Congress

By John A. Russell
New York Reporter

TEANECK, N.J.—The General Motors-Toyota joint-venture agreement will come under Congressional scrutiny in two weeks in hearings before the Commerce, Transportation and Tourism subcommittee.

Subcommittee chairman James J. Florio (D-N.J.) dropped this bombshell while speaking before the annual meeting of the Dealers Alliance, the combined Ford and Chevrolet Dealers Alliances.

Florio was at the meeting to voice his opinions on H.R. 1415, the bill that would ban fleet subsidies, but diverted from his remarks to make the announcement about the hearings.

Before 300 dealers, he termed the hearings necessary, saying, "I am troubled by the way this decision was reached."

The FTC has given the tentative go-ahead for the venture between the two largest auto makers in the world despite objections from other U. S. auto makers.

The decision, Florio said, effectively legislates the future of a giant industry, yet there are claims that there was inadequate opportunity for consideration of the consequences.

"There are contentions that the decision is flagrantly at odds with traditional anti-monopoly standards," he said.

After the meeting, Florio told Automotive News the move for the hearings was sparked by Congress receiving a heavily censured FTC report on the agreement in response to its inquiry for further information.

Sources indicated some members of Congress were angered by these censored reports and the move to have the hearings started. These hearings are scheduled for Feb. 8.

• But Florio's prime mission at the meeting was to voice support for the anti-fleet subsidy bill.

Ed Mullane, president of FDA, has been waging war against subsidies for over a year. One hearing has already been held before Florio's subcommittee.

Florio told the gathering "the debate over these bills is evidence to me that smaller businesses and the contribution they make to competition and consumers is endangered."

He went on to criticize fed-

May sell Isuzu, Suzuki, South American Chevys overseas

GM world bid links Japan, Brazil

By Richard Feast
European Editor

BRUSSELS. — General Motors may sell its surplus Suzuki and Isuzu models in overseas markets because of the strict quotas imposed in the U. S.

If it does, the Japanese cars will join Brazilian-sourced cars in a determined bid by GM's Overseas Distribution Corp. to recapture lost worldwide markets.

Last year, GMODC sold around 70,000 units in overseas markets, mainly in the Middle East, but also in Latin America, Europe and Japan. But in the late 1970s the export figure was 150,000.

"The change is essentially due to the over-valued dollar," explains Richard F. McGill, executive vice president, GMODC.

This change in sourcing, away from North America toward products from low-cost countries like Brazil and (possibly) Japan, also stems from the way in which U. S. and European makers face stiff Japanese competition in exports as well as domestic markets.

GM has taken no decision on what to do with the Suzuki and Isuzu models, but it does face a serious problem of what to do with the cars it cannot import to the U. S. But as long as the cars are sold as Chevrolets, they could go direct to other world markets.

However, the company has decided to use GM do Brazil as a production platform for its overseas sales drive, even if no formal announcement has been made.

In using its Brazilian subsidiary — established in 1925 — GM is following a path already established by the country's other auto makers. A generous export incentive scheme by the Brazilian Government has prompted a great deal of similar activity.

Fiat Auto ships diesel engines and 127 models to Europe. This year, it will ship the new Uno as well. Ford has begun selling Brazilian-made Escorts in Scandinavian markets, and Volkswagen has revealed that it will build a completely new model from 1985 for domestic and export markets.

Passenger cars are all based on designs by Adam Opel. McGill believes the ones which would have most export potential are the rear-drive T-car and front-drive J-car (known as Chevrolet Monza).

He adds, "It's no secret that the Middle East is a huge pickup market. Brazil is a pickup producer, and I believe we could find a very good reception for this type of vehicle."

Because of the emission and safety regulations which have to be met around the world, GM officials will not talk about timing. Neither will they talk about volumes.

• The plans will go ahead "when we're ready, and certain that the producers are designed and specified for the markets."

It seems unlikely, though, that this will take much more than another year. GM has a distribution network already established to handle 150,000 vehicles a year, which must be the minimum sales target.

Under the terms of the U. S.-Japan export agreement for 1984, Isuzu has been allocated 50,000 units (17,000 in 1983) and newcomer Suzuki only 17,000. This is a quarter of the volume for which GM hoped.

It made its investments in Isuzu (in which it now holds 43 percent) and Suzuki (5.3 percent) on expectations of

breaking news

New hurdle in GM-Toyota venture

WASHINGTON. — At presstime, the five Federal Trade Commissioners were voting on whether to ask for a postponement of a Congressional hearing involving the pending General Motors-Toyota joint venture now set for Feb. 8, or permission to send FTC staff in lieu of commissioners. Concern was being voiced that any appearance to explain procedures used in arriving at the 3-2 vote provisionally accepting the proposed use of the California plant might appear to "taint" their final decision, which must come after close of the comment period Feb. 27.

New Jersey Rep. James J. Florio, who chairs the Commerce, Transportation and Tourism subcommittee, has expressed his personal opposition to the joint venture.

Isuzu van to be produced in UK

LUTON, England. — Bedford, part of General Motors' World Truck and Bus Group is in the middle of a $100-million investment program which will result in production at Luton by the end of this year of the Isuzu WFR panel van, as well as a new electric van.

They go into Mark VII, Continental in February

Ford unveils BMW diesel option

By Kathleen Hamilton
Financial Editor

It wasn't the best time to introduce a diesel engine, so executives of Ford Motor Co. made the best of the engine, stressing its European quality and its new design, and emphasizing the growth of turbodiesel sales in the U. S.

Next model year, Thunderbird and Cougar will join Continental and the Mark VII in offering the new BMW diesel as an option.

The engine already appears in BMW's 5-series in Europe and will be offered this fall in BMW's U. S. version, to be called the 524td.

The diesel engine package — which includes a ZF automatic transmission — adds $1,200 to the price of the Mark VII or Lincoln Continental.

Ford expects to be at full diesel production on Lincoln at its Wixom (Mich.) plant by the third week in February. Lincoln-Mercury dealers will have adequate inventories by the end of March, said Robert L. Rewey, the new Lincoln-Mercury general manager.

Diesels are expected to be fitted in 10 percent of Continentals and Mark VIIs built during the rest of this model year, Rewey said. That would add up to diesel sales of 3,500 to 4,000 units during the March-to-October period.

The installation rate for Cougar and Thunderbird is expected to be lower, but actual volume will be higher because more Cougars and Thunderbirds are built.

• Ford has negotiated a three-year price-volume contract with BMW-Motoren, so there is no minimum order, said Mel J. Bernia, Ford North American Automotive Operations powertrain and chassis program planning manager.

Ford thinks the market for upper-line diesels like the one BMW is building for Lincoln will be 40,000 to 50,000 this year, Rewey said.

At the maximum, Ford sees the BMW diesels taking no more than about a 20-percent share of sales or 12,000 to 14,000 cars, for Lincoln-Mercury, Rewey said.

Pointing to increasing sales of turbocharged diesels by such luxury makers as Mercedes-Benz, Volvo and Peugeot, Rewey said demand for European turbodiesels in the U. S. has grown.

He also cited higher-than-expected sales of Lynxes with Toyo Kogyo diesels as evidence that the new diesel program will succeed.

Stable fuel supplies and diesel-fuel prices that rival those of gasoline have halved the diesel-car's market penetration. But repair problems, especially with General Motors diesels, also have contributed to diesel sales problems.

• Ford and L-M officials at the Detroit press briefing on the new engine repeatedly stressed the BMW engine had been designed from Day One as a diesel engine, not converted from a gasoline engine.

Turbodiesel sales have indeed been growing, in contrast to sales of normally aspirated diesels. But at least part of the reason for the growth has been availability. With heavy cars in its fleet and CAFE rules to meet, Mercedes has to sell lots of diesels.

One of the company's recent buyer surveys found its diesel buyers unfamiliar with diesel engines at the time of purchase. They were buying the name Mercedes and its reputation, the company found.

It was only later, when the diesel engines proved acceptable performers and easy to maintain, that the owners developed a strong loyalty to their diesel engines, the company found.

Volvo's experience with its lighter fleet may be closer to Ford's. It sees a stable core of perhaps 10 percent of the market as diesel buyers, with the turbodiesel stealing market share primarily from normally aspirated diesels because of the turbo's performance boost.

• Of course, all the diesel makers agree that as the diesel engine is improved, their customer base will grow. Electronics have so much improved turbocharged indirect-injection diesels that BMW may not actually ever build direct-injection diesels for autos, said Robert Buchelhofer, chairman of BMW-Motoren. Directly injected diesels have higher emissions.

He said turbodiesels cost about 15 percent more to build than gasoline engines, chiefly because of the fuel-injection pump and turbocharger, in this case a Garrett.

But turbocharging — rather than Oldsmobile's potential solution of tuned induction — appears to be correct for a diesel engine the size of BMW's 2.4-liter, Buchelhofer said. The BMW engine has the highest output per liter of any diesel, he said. Maximum output is 115 HP; maximum torque, 155 pounds-feet.

BMW reached its sound and fuel-economy targets and will be able to meet forthcoming U. S. standards that will require lower particulate levels, perhaps with traps, he said. Estimated EPA ratings for the diesel Lincolns are 25 MPG, 39

Toyo Kogyo chief clarifies report of deal with Ford

DETROIT. — It will be some time before Toyo Kogyo reaches any decision on whether to build cars in the U. S., TK President Yoshiki Yamasaki said in Japan last week.

A study of the feasibility of such a move has been going on for some time and "is moving ahead," he told a group of Japanese newsmen.

He was responding to a report published here earlier to the effect that TK was nearly ready to sign an agreement to purchase a Ford Motor Co. plant in suburban Flat Rock, Mich.

The report said TK would purchase the idle Ford casting center to produce a new front-wheel-drive Mustang for Ford by 1987.

A Ford spokesman said a TK team visited the plant earlier this month, but said that a number of other potential buyers have, too.

Fire destroys Dodge dealership

Amid the ruins of Jack Prince's fire-blackened Prince Dodge, Inc., Inglewood, Calif., lie the gutted remains of a new 1984 Dodge Caravan. The Caravan was delivered to Prince Dodge on the eve of a $1 million fire, which destroyed the 4,000-square-foot structure and inventory, including 23 new and used cars. Prince plans to rebuild the dealership on its original site.

For heads of state only

Albert Mardikian displays a Ferrari 400 limousine which was completed at his shop in Costa Mesa, Calif. The $25,000 vehicle, available only to heads of state, includes a TV, Ferrari crystal, telephone and wire wheels. Options include armoring, smoke detectors, bomb detectors and gun holsters.

Gossip singles out GM as buyer of Jaguar

By Richard Feast
European Editor

LONDON. — It was inevitable that General Motors should talk seriously about buying Jaguar Cars in England.

The fact is that Jaguar is for sale. It would be stunning if every other auto maker in the world had not examined the possibility of buying the luxury car maker — and that included Ford and Chrysler.

Officials at Jaguar and its parent, BL Group, have been tight-lipped about the sale of the company. The same cannot be said of government ministers in Whitehall. Their propensity for gossip is legion in the land.

The Government owns BL but does not want it. It is committed to selling back to private enterprise every state asset it can, and the most saleable bit of BL present is Jaguar.

But while the policy is clear, the methods of achieving it are not. Will there be a management buy-out, which Jaguar Chairman John Egan would like? Will there be a separate floatation on the stock exchange, which the institutional investors would like?

Or will there be a straight— or even partial—sale to another company?

• Hence the gossip in the corridors of power. GM's name was bandied about to such a degree that it issued a formal statement: "The possible privatization of Jaguar has been known and speculated upon for some time. GM regularly reviews business activity and opportunities. However, we have not made an offer for Jaguar."

The Government is in a position of strength over Jaguar. Its productivity and quality advances are well documented. It has made big investments in a new engine range, there will be a new model (the XJ-40) in October and production processes are being modernized with robots.

It sold 29,100 cars last year, up a third on the previous year. This year the talk is of 32,000 — though, significantly, the new engine plant has a capacity of double that number.

These may seem small numbers to a company like GM, but they are becoming very respectable in comparison with Jaguar's main rivals, Daimler-Benz and BMW.

In 1982 D-B made 104,000 examples of its S-class and sports cars, and BMW made 33,800 of its 6 and 7 series. Their outputs last year were up a little in each case.

Jaguar's track record over the past three years has been mighty impressive. The unknown is what the asking price is, because Jaguar's finances are still hidden within group figures, which include the less-profitable Austin Rover Group.

Unofficial estimates on the Jaguar price tag range wildly from $150 million to $450 million. Everything, as the old cliche says, is for sale at the right price.

Purchase by GM would be a logical outcome. The simple prestige value of the Jaguar name would be hard to match anywhere around the world — and Mercedes and BMW are just not for sale.

These premium makes have steadily expanded business throughout the sales slump, while so many other volume makers faltered. Having that sort of regular income is an attractive proposition for any auto maker.

• The one thing which might prevent a Jaguar sale to GM would be chauvinism. Britain's auto industry has had so few success stories of late, and the prospect of what is seen as part of the country's heritage being sold abroad might be too much for ministers to accept.

GM may be acceptable, because of its Vauxhall and Bedford connections. So might Ford. Chrysler might want it — but

Landing of the Maserati Biturbos

The first shipment of the Maserati Biturbos has arrived at the Port of Entry in Baltimore Harbor. Maserati will export approximately 3,500 Biturbos to the U. S. for the 1984 model year.

Mid-month total tops year ago by 26 pct.

New-car sales soar to five-year high

By Jenny L. King
Staff Writer

Mid-January new-car sales were the highest for that period in five years as the recovery marched into the new calendar year with vigor.

Each major U. S. company reported a sales increase for Jan. 11-20. Ford Motor Co. led the competition with its 40.18-percent improvement.

The domestic sales total of 182,273 was up 25.99 percent from 144,678 for the same period a year earlier, and was better than any comparable one since the 224,530 units reported in 1979.

The Ford sales gain of 40.18 percent translated into sales of 47,294 passenger cars this year with 33,738 in 1983. Chrysler Corp. was up 29.57 percent, to 21,573 from 16,650. General Motors sales expanded 18.50 percent, to 104,545 from 88,222.

At American Motors, sales were up 5.00 percent, to an estimated 4,200 from 4,000. Volkswagen reported sales of 2,241 U. S.-built Rabbits, up 8.37 percent from 2,068. Honda sales totaled 2,420 U. S.-assembled Accords, with no year-ago figure available.

GM's share of the mid-month market slipped to 57.36 percent from 60.98 percent. Ford was up to 25.95 percent from 23.32 percent. Chrysler claimed 11.83 percent, up from 11.51 percent. AMC sales accounted for 2.30 percent, down from 2.76 percent. VW slipped to 1.23 percent from 1.43 percent, and Honda held 1.33 percent.

All U. S. makes were up for the period except AMC, which dropped an estimated 47.50 percent, to 840 from 1,600. Renault U. S.-built nameplates combined for an estimated 3,360, up 40.00 percent from 2,400.

At Chrysler Corp., Plymouth was up 39.58 percent, Chrysler was up 28.17 percent and Dodge was up 24.06 percent.

Ford leaped 40.12 percent, Mercury was up 45.58 percent and Lincoln was up 24.68 percent.

At GM, Pontiac enjoyed the greatest growth in the period, up 47.59 percent. Oldsmobile was up 28.65 percent, Chevrolet was up 16.72 percent, Cadillac was up 2.99 percent and Buick was up 0.19 percent.

With nine selling days in the period this year and last, the daily selling rate difference was plus 25.99 percent, going to 20,253 from 16,075.

Annualized sales based on the mid-month total were 7,841,000, down from a rate of 8,084,000 Jan. 1-10.

Cumulative sales from the first of the year were up 28.70 percent, to 331,409 from 257,500 in 1983.

Jury selection in DeLorean case to start March 6

LOS ANGELES.—Jury selection in the John Z. DeLorean drug-trafficking case is scheduled to begin March 6, Judge Robert M. Takasugi announced in U.S. District Court here last week.

The prosecution was seeking a one-week delay because of the expected absence of Assistant U.S. Attorney Robert Perry. Perry was recently assigned to the case, replacing Assistant U.S. Attorney Layn Phillips, who was named U.S. Attorney in Tulsa. James P. Walsh continues as lead prosecutor.

Two other preliminary hearings have been scheduled, one for Feb. 3 dealing with the defense's request to subpena stories involving the case published by 17 news organizations, and another Feb. 13 on a motion that the charges be dismissed on grounds of adverse pre-trial publicity.

Hino enters U. S. medium-truck market

Hino America Distributors, Inc., has introduced two Japanese medium trucks in a five-state area in the Southeast. The trucks, one a Class 6 and the other a Class 7, are assembled in Jacksonville from semi-knocked-down units shipped from Japan to Savannah, Ga., and transported to Jacksonville by truck.

Hino America sees 600 retail sales in 1984

By Jack Walsh
Truck Editor

BOCA RATON, Fla. — Hino America Distributors, Inc., is off and running in the U.S. medium-truck market. Currently, the pace is slow, but rapid acceleration is anticipated.

Jim Moran, president of the firm which assembles and markets the Japanese Classes 6 and 7 trucks in five Southeastern states, told dealers, the truck press and fleet representatives that Hino America's 1984 objective is 600 retail sales.

"We have the capacity to build 2,000 trucks a year now and could go higher," he said. "If a dealer gets an order for 100 or even 1,000 units, we could build them."

Two Hino straight trucks, one a Class 6 and the other a Class 7, are assembled at a facility in Jacksonville.

The semi-knocked-down vehicles are shipped from Japan to Savannah, Ga., in sets of four — cabs, engines, transmissions, frames, axles and tires —and are transported by truck to Jacksonville.

Gary W. Hali, general assembly director, said the only U.S.-sourced items at this time are the fuel tanks and an optional Eaton two-speed rear axle and a four-speed Allison automatic transmission.

The plant currently is turning out three units a day on one eight-hour shift. Moran said Hino America hopes to add a tractor model to its product lineup "sometime down the road."

The Class 6 FE Series truck has a GVW rating of 25,000 pounds and is powered by a naturally aspirated, direct-injection six-cylinder Hino diesel mated with a Hino six-speed manual transmission. Wheelbases range from 148.8 inches to 198.8 inches.

The GVW rating of the Class 7 FF Series truck is 28,000 pounds, and the wheelbases and engine/transmission combination are the same as those in the FE Series. The in-line six develops 160 HP at 3,000 RPM and the maximum torque is 304 foot pounds at 1,800 RPM.

Options include radio (AM and AM/FM), air conditioner, engine tachometer with engine over-run warning buzzer, radiator curtain, engine fan clutch and transmission power takeoff.

• Toshio Fukazawa, president, Hino Motors, Ltd., Japan, was on hand for the formal dedication of the Jacksonville plant in mid-January and the Boca Raton meeting.

He noted that the company started its U.S. diesel certification program in 1973, and that development of trucks for the U.S. market was launched in 1977.

Moran, who became Hino's

Granning expands suspensions line

Granning Suspensions, Inc., Livonia, Mich., has added the T300M auxiliary air-ride suspension for imported truck-chassis configurations. Designed for tag-axle applications, it fits mid-range truck chassis with frame widths from 27¾ inches to 35⅝ inches. It also can be fitted with an optional Granning T502L center-mounted air-lift kit to raise the axle during unloaded runs.

truck industry news

11-month, November gains touch almost all weight groups

Truck registrations rise sharply

Registrations of new trucks in the U.S. showed dramatic gains for both November and the January-November period, with increases in almost all of the eight weight classifications.

R. L. Polk & Co. reported that 11-month tallies totaled 2,644,686 units, an increase of 21.1 percent over the year-earlier 2,184,378. Registrations were up in light and medium trucks, but down slightly in the heavies.

The November total rose 17.6 percent to 253,205 units, compared with 215,220 in the same month in 1982. Lights and heavies showed strong advances, while mediums dropped below the year-earlier mark.

Ford, which was No. 1 in calendar 1983 retail sales, increased its lead over second-place Chevrolet by more than 2,500 units during the month. Through November, the Ford total was 839,507 units, compared with Chevrolet's 803,778.

Ford accounted for 31.74 percent of the industry total through November, an increase of 1.69 percentage points over the previous year's 30.05 percent on 656,365 registrations.

Chevrolet, which was No. 1 through November in 1982, had 30.39 percent of the 11-month total. In 1982, its 680,925 registrations accounted for 31.17 percent of the total.

Light-truck registrations in the January-November period totaled 2,486,652 units, a gain of 22.7 percent over the year-earlier 2,026,193. There were increases in all three weight groups in this market segment.

The Group 1 count was up 22.1 percent through November to 1,401,398 units, compared with 1,148,279 the previous year. The Group 2 total was 1,065,772, up 23.9 percent over the year-earlier 859,950 units. Group 3 was 5.7 percent higher, from 17,964 units in 1982 to 18,982.

Medium-truck tallies over the 11-month span showed an improvement of 3.9 percent, rising from 41,579 units in 1982 to 43,200. There were gains in two of the three weight classifications.

In Group 4, the total was 306 units, compared with only eight in the first 11 months of 1982. Group 5 was down 41.2 percent to 765 units, compared with 1,302 the previous year. Registrations of Group 6 vehicles totaled 42,129, an increase of 4.6 per-

GVW table on Page 80.

cent over the year-earlier 40,269 units.

Heavy trucks were down 1.5 percent through November in spite of a modest upturn in Group 8 registrations. The 11-month total was 114,834, compared with 116,606 units the previous year.

Group 7 tallies weer off 11.3 percent, from 50,268 units through November in 1982 to 44,570. But the Group 8 total was 5.9 percent higher than the previous year, from 66,338 units to 70,264.

In November, there were 238,661 light-truck registrations, an increase of 18.5 percent over the year-earlier 201,381.

The Group 1 count during the month was up 9.9 percent to 128,585 units, compared with 117,018 in 1982. Group 2 tallies totaled 107,618, up 30.1 percent from the year-earlier 82,393. In Group 3, there were 2,458 registrations, a gain of 47.2 percent over the previous year's 1,670 units.

A decline in Group 6 tallies during the month resulted in an 18 percent drop in medium-truck sales, 3,505 versus 4,274.

In Group 4, there were 29 registrations in November, compared with only one in 1982. Group 5 was up 172.7 percent to 150 units, compared with 55 the previous year. Group 6 was off 21.1 percent, from 4,218 units in 1982 to 3,326.

Heavy-truck registrations during the month were up 15.4 percent, from 9,565 units in 1982 to 11,039. The Group 7 total was 3,860, a gain of 3.3 percent over the previous year's 3,738. In Group 8, there were 7,179 tallies, 23.2 percent higher than the year-earlier 5,827.

HD registrations in November up 15.4 pct. over '82

November registrations of new heavy trucks in the U.S. were significantly higher than a year earlier, but the 11-month total was down slightly from the 1982 pace.

During the month, according to R. L. Polk & Co. statistics, 11,039 Groups 7 and 8 trucks were registered, an increase of 15.4 percent over 1982's 9,565 units. There were gains in both weight classes in November.

Through November, the heavy-truck count was off 1.5 percent to 114,834 units, compared with 116,606 in the like period a year earlier. Tallies were lower for Group 7, but up in Group 8.

November registrations of Group 7 trucks totaled 3,860 units, an increase of 3.3 percent over the year earlier 3,738 vehicles. The Group 8 count was 23.2 percent higher, from 5,827 units a year earlier to 7,179.

Eleven-month tallies of Group 8 vehicles totaled 70,264, a gain

Used-truck outlet in Georgia opened by Volvo White

GREENSBORO, N. C. — With increased emphasis on the marketing of used as well as new vehicles, Volvo White Truck Corp. has opened its first used-truck center in Forest Park, Ga., near Atlanta.

According to Tom Jones, Volvo White's newly appointed Southeast used-truck manager, the used-truck center concept is an expansion of the company's existing locator program which gives Volvo White dealers access to a nationwide inventory of used trucks.

Volvo White issues a monthly publication to its dealers listing used vehicles in inventory, with specifications and prices.

Import cars lose 4 points in share of market

By Jenny L. King
Staff Writer

Imports tumbled nearly four percentage points in their share of total new-car registrations for October, 1983, versus October, 1982. Total import registrations for the month were down less than 200 units from the year-earlier sum, but growth of the domestic market robbed them of their former share.

According to figures compiled by R. L. Polk & Co., registrations of new imported cars numbered 189,688 last October and took 25.06 percent of the U.S. market. The preceding year, they added to 189,821, or 28.99 percent.

Domestic registrations in October of 567,107 were up 21.96 percent from 464,985 a year earlier.

Nissan was the top import for October, with 39,273 registrations and 20.70 percent of the import market. It was up 0.46 percentage points from 20.24 percent in 1982. Toyota claimed second place with 19.55 percent of the market, a drop of 2.22 percentage points for the perennial leader.

Third-place Honda was up 0.78 percentage points, to 16.57 percent from 15.97 percent. Honda numbers include Accords built at the company's Ohio plant.

Fouth-place Mazda was down 0.42 percentage points in October; Subaru was up 0.17 percentage points, and Volkswagen dropped 0.64 percentage points. Subaru moved into fifth place and VW was nudged into sixth.

Volvo claimed seventh place and gained 0.96 percentage points; Mercedes moved back to eighth and lost 0.16 percentage points; BMW was ninth and up 0.20 percentage points, and the Mitsubishi Colt/Vista (the Chrysler imports) took 10th, replacing Audi.

R. L. Polk & Co. has revamped its 1982 registrations figures, deleting the U.S.-built Renault Alliance/Encore from the import listing. The company does include U.S.-built Rabbits in its VW (imports) total and U.S. Hondas in the Honda total.

The top 10 imports claimed 88.41 percent of the import market, down from 89.63 percent a year earlier.

Import registrations for the first 10 months of 1983 were 2,042,874, up 8.40 percent from 1,884,651 in the same period, 1982. Their share of the market was pared to 27.93 percent from 29.86 percent by competing domestics.

In the 10 months, Toyota lost 1.36 percentage points, Nissan gained 1.27 percentage points, Honda was off 0.32 percentage points and Mazda climbed 0.03 percentage points. Subaru, VW and Audi all lost ground compared with 1982, while Volvo, Mercedes and BMW picked up parts of percentage points.

The Top Ten imports claimed 89.01 percent of the import total for the period compared with 89.95 percent in 1982.

Japanese-built imported cars represented 76.07 percent of the import total in October, down from 78.07 percent the preceding year. German products claim 10.38 percent, down from 10.62 percent and U.S. imports were up 6.28 percent from 4.47 percent.

Registrations by country of origin included:

	Oct., 1983	Oct., 1982
Japan	144,287	148,184
West Germany	19,683	20,166
United States	11,910	8,490
Sweden	8,200	6,305
France	3,781	4,296
Great Britain	1,254	1,014
Italy	466	1,060
Ireland	107	306
TOTAL	189,688	189,821

Ten-month registrations included the following numbers of cars from eight countries:

	10 Mos., 1983	10 Mos., 1982
Japan	1,572,991	1,473,149
West Germany	210,514	186,530
United States	100,269	81,454
Sweden	96,727	77,400
France	40,820	41,832
Great Britain	12,796	8,111
Italy	7,913	13,359
Ireland	844	2,816
TOTAL	2,042,874	1,884,651

October-to-October registrations of new imported trucks were up 6.28 percent, to 43,819 from 41,230. Total for each major manufacturer looked like this:

	Oct., 1983	Oct., 1982
Toyota	14,372	15,204
Nissan	12,844	10,696
Mazda	6,114	3,495
Dodge Ram 50	3,700	3,287
Others	6,789	8,548
TOTAL	43,819	41,230

Year-to-date truck registrations were up 14.85 percent in 1983 through October, to 406,241 from 353,719. The breakout included:

	1983 10 Mos.,	1982 10 Mos.,
Toyota	143,874	121,185
Nissan	111,448	79,704
Mazda	55,726	30,553
Dodge Ram 50	26,308	26,524
Others	68,885	95,753
TOTAL	406,241	353,719

ENGLEWOOD CLIFFS, N. J. —Alfa Romeo, Inc., has promoted Craig Morningstar, formerly its Los Angeles district sales manager, to public relations manager. He succeeds James B. Weber, who resigned.

Justice Dept. gives go-ahead to LP-gas promotional fund

WASHINGTON. — The establishment of a promotional fund by the National LP-Gas Assn. to advertise nationally the use of propane as an automotive fuel alternative will not be challenged by the Government, the Department of Justice announced.

The Engine Fuel Promotional Fund, to be operated by a trade association based in Arlington, Va., will be financed by voluntary contributions from association members. These include propane manufacturers of carburetion units (fuel locks, carburetors and converters), propane-tank manufacturers and propane-equipment distributors.

The Justice Department took a look at the fund because of possible anti-trust implications arising from the joint advertising proposal.

Under the plan, equipment manufacturers and distributors would contribute a percentage of annual gross sales and propane tank manufacturers would contribute a fixed amount per unit sold, the department said.

Equipment distributors and tank manufacturers would also collect a voluntary contribution from purchasers of carburetion units and propane tanks, after being advised by letter that the contribution is voluntary.

The association said each member would continue to determine independently the price, terms and conditions of its product.

Assistant Attorney General for Antitrust, J. Paul McGrath, said in a letter to the association that jointly funded advertising may increase the sales of propane and may have the procompetitive effect of stimulating competition with other forms of engine fuel and related equipment, "a result that is unlikely to be achieved by any single manufacturer or distributor due to the expense of national advertising."

The Justice Department's concern centered on whether participating members could individually raise their prices to offset additional advertising costs. But, the department found that the revenues would not represent increased profit, but would be used for product advertising, "which may increase the demand for the product, resulting in increased propane production in the automotive market."

The department cautioned, however, that while individual decisions to raise prices to reflect advertising costs are legal under the antitrust laws, an understanding between association members to do so would not be legal.

McGrath said that the fund's potential procompetitive effects would be outweighed by the large number of participating members, the newness of the industry and competition from other engine fuels.

In new edition of The Car Book

Best, worst cars rated according to quality

WASHINGTON. — The 1984 edition of The Car Book is the first to rate cars according to their overall quality, according to its author, Jack Gillis.

The book, which Gillis, a former NHTSA official, continued on his own after ex-NHTSA Administrator Raymond A. Peck dropped it, rates cars according to their performance in five weighted categories — crash testing, fuel economy, preventive maintenance, repair costs and insurance costs.

According to The Car Book, the best overall cars for 1984 are Ford Escort/Mercury Lynx, Toyota Camry, Nissan Stanza, Ford LTD/Mercury Marquis, Nissan 200-SX, Ford Mustang/Mercury Capri, Dodge Charger/Plymouth Turismo and Oldsmobile Cutlass Ciera, Omega and Firenza.

The worst overall cars, it says, are Cadillac Fleetwood/deVille, Oldsmobile 98, Renault Sportwagon, Volkswagen Rabbit, Scirocco and Quantum, Ford Thunderbird, Mercury Cougar, Toyota Cressida, Buick Electra, and Chevrolet Caprice/Impala.

By car sizes, Escort/Lynx and Camry were rated best among the subcompacts, while Renault Sportwagon, the Rabbit and the Scirocco were rated worst.

Winning the roses among the compacts were Mustang/Capri, 200-SX and Omega. Drawing the scallions were Quantum and Chrysler LeBaron convertible.

Among intermediates, Cutlass Ciera and Volvo DL were the winners, the Thunderbird, Cougar and Cressida the losers. Leading the pack among large cars were the Ford LTD Crown Victoria and Mercury Grand Marquis, with the Fleetwood/deVille and Oldsmobile 98 bringing up the rear.

The book also lists good choices among both new and used cars for 1984, according to the information included in its purchasing guides.

"Good choices" among new cars include the Escort, Lynx, Stanza, Dodge Charger, Plymouth Turismo, Chevette, Pontiac 1000 and Honda Accord among subcompacts; Mustang, Capri, 200-SX and Firenza among compacts; Volvo DL, Buick Regal, Cutlass Supreme and Pontiac Bonneville among intermediates, and Crown Victoria, Grand Marquis and Oldsmobile Toronado among large cars.

Among used cars, the likeliest bets, according to The Car Book, are Ford LTD, Datsun 510, Honda Civic, Dodge Dart, Lincoln Continental, Mazda GLC, Oldsmobile 88, Plymouth Valiant/Duster, Subaru, Toyota Corolla and Corona and Volvo 240.

The auto ratings in "The Car Book" showed no overall pattern between foreign and domestic cars as to crash testing, fuel economy or any of the other quality ratings.

Gillis noted that crash results for vastly different sizes of car — for example, between a Honda Civic and a Cadillac Seville — cannot and should not be compared with each other.

NHTSA, after having dropped The Car Book, now plans to offer a publication called Autowise, containing much the same information as The Car Book. Autowise probably will not attempt to rate cars.

Copies of the 1984 edition of The Car Book may be obtained for $8.95 from the Center for Auto Safety, 1223 Dupont Circle Building, Washington, D.C. 20036.

HD registrations in November up 15.4 pct. over '82

Continued from Page 14

of 5.9 percent over the 66,338 registered in the like period last year. The Group 7 count was off 11.3 percent to 44,570 units, compared with 50,268 in 1982.

Through November, International was No. 1 in heavy-truck tallies with 27,662, accounting for 24.09 percent of the industry total. At the same time in 1982, it was in second place with 26,305 units and 22.56 percent of the total.

Second-place Ford had 23,675 heavy-truck registrations, accounting for 20.62 percent of the total. A year ago, it was No. 1 with 27,511 units, good for 23.59 percent of the total.

Through November, Freightliner had the biggest improvement in market share. Its 9,866 registrations accounted for 8.59 percent of the total, up 3.06 percentage points from last year's 5.53 percent on 6,447 tallies.

The biggest loser in penetration was GMC, with a decline of 3.90 points. Its 11-month count was 14,414, accounting for 12.55 percent of the total. A year ago, its 19,182 registrations were good for 16.45 percent.

Hino America charts '84 sales reaching 600

Continued from Page 14

first and only U.S. distributor last July, said four trucks have been in service in the U.S. since 1982—two with more than 100,000 miles—and have encountered no problems.

Hino America has signed 12 dealers in the major metropolitan areas in the five-state area, and John McNally, the firm's executive vice president and general manager, said there probably would be no more than 15.

Moran said most of the dealers currently handle Kenworth heavy trucks and that several have Mercedes-Benz franchises.

"There will be no over-dealering in our operation," Moran said. "We want our dealers to be successful, and they have to be profitable to do a good job of selling and servicing the Hino trucks."

Hatfield honored

Bud Hatfield, right, Trader Bud's Westside Dodge, Columbus, O., receives Chrysler Corp.'s award for excellence from D. R. Krumboltz, Chrysler's Cincinnati zone manager. The award is in recognition of a dealership's performance in sales, customer service, administration, facilities and community relations.

Warner speaks at Northwood marketing classes

MIDLAND, Mich.—Rick Warner, president of Rick Warner Truckland, Salt Lake City, served as dealer-in-residence at Northwood Institute here.

Warner shared his experience in all aspects of owning and operating a large dealership with Northwood's automotive marketing students.

Warner bought his dealership in 1965 and has seen sales grow from $11 million to more than $80 million per year.

Last year, Rick Warner Truckland and Rick Warner Ford sold more than $17 million worth of parts.

Dodge/USFL Man of the Year

Raymond Chester, second from right, Oakland Invader tight end, accepts keys to a new Dodge Ramcharger following his selection as 1983 Dodge/U. S. Football League Man of the Year. Pete Sehlmeyer, right, Dodge Oakland district sales manager, made the presentation. At left are Frank Baekens, general manager, Hayward Dodge, Hayward, Calif., and Barbara Nichols, also of the dealership. Chester, who retired at the end of the season, was honored for his community service as well as his performance on the football field.

Ford recalling Mark VII's and 360 F-250 light trucks

DEARBORN. — Ford Motor Co. is recalling approximately 4,400 1984-model Continental Mark VII cars for modification of an antitheft locking mechanism in the steering column.

"The mechanism may not conform to a requirement of Federal Vehicle Safety Standard No. 114, 'theft protection,'" said John P. King, service engineering manager for Ford Parts and Service Division.

"To meet this requirement, the column mechanism is designed to prevent its locking of the steering mechanism unless the vehicle gearshift lever is in the "park" position," King said.

On some of these cars, this mechanism may malfunction, permitting the column to lock when the ignition key is turned to an "off" position, even though the gearshift selector has not been placed in its "park" position.

Most drivers never would have reason to turn the ignition keys of their vehicles to the "off" position while their vehicles are in motion, King said.

In addition to the cars in customer hands, another 8,000 vehicles in transit to dealers or in dealer inventory will be modified.

A new tire-pressure-and-loading information placard will be mounted on the door post of the recalled cars, King said. The old placard incorrectly identified the cars as being rated for six passengers rather than for five and incorrectly stated the cargo capacity at 200 pounds, instead of 150 pounds.

There have been no reports of accidents connected with either condition, King said.

Ford also is recalling 360 1984-model Ford F-250 Series Heavy-Duty 4x4 SuperCab light trucks built through Oct. 5, 1983, for replacement of the front-drive axles.

"Front-drive axles rated at 3,850 pounds, rather than 4,600 pounds, as specified in product literature, were installed in these vehicles," King said. "In severe-use applications, the 3,850-pound-rated axles likely would be less durable than the 4,600-pound-rated axles. Loss of power to the front wheels eventually could occur."

Dealer fails to block use of Encore name

MONTREAL. — A Honda dealer here has failed in his attempt to block the use of the Encore name on American Motors-Renault's '84 hatchback.

Five-year- old Encore, Automobiles, Ltee., was seeking a court injunction, claiming it has exclusive rights to the name.

A judge, however, pointed out that the name is hardly unique. Preliminary research showed nearly 100 area businesses have been using it as their trademark.

The dealer's contention that the name would create confusion in the minds of car buyers was rejected by the judge.

VanHoeck appointed

DETROIT. — Marie VanHoeck has been appointed staff scientist by the MVMA. She will be involved in environmental activities.

14 assembly plants work overtime

Auto production jumps to 166,085

By Joe Wilssens
Staff Writer

With 14 domestic auto assembly plants working extra hours last week, U. S. auto makers slated production of 166,085 units, a 1.79 percent increase over the prior week's output of 163,169.

Last week's total was a healthy 39.09 percent ahead of the 119,409 units produced in the year-ago week.

Breakdown for the week by company was: General Motors, 59.41 percent; Ford Motor Co., 21.72 percent; Chrysler Corp., 13.31 percent; American Motors, 2.89 percent; Volkswagen of America, 1.41 percent, and Honda, 1.26 percent.

GM's Orion (Mich.) plant was down last week while Wentzville (Mo.) worked only one day due to part shortages. Both are expected to return to production this week. Working two shifts on Saturday (Jan. 28) at GM were: Detroit, Janesville (Wis.), Lansing (B-D and G lines), Lordstown (O.) and Pontiac.

Five Ford facilities put in extra daily hours. They were: Atlanta, Chicago, Edison (N.J.), St. Louis and Wayne (Mich.). This week, Ford will follow the same daily overtime schedule and will add Saturday (Feb. 4) hours at Atlanta and Wayne.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 put in two daily 9-hour shifts. Jefferson (Detroit) worked two 8½-hour shifts.

This week, Chrysler plans the same daily overtime schedule; extra Saturday hours will be added at Belvidere and St. Louis No. 1.

AMC increases prices on imports, adds options

Continued from Page 4

added in, AMC calculates the price of a comparably equipped Sportwagon fell this year by $215, or 2.2 percent.

AMC is now taking orders on "Diamond Edition" models of the Renault Encore and Alliance and Jeep CJ-7. The vehicles, with packages of equipment at reduced prices, will be built in February and March for sale this spring.

Diamond Edition Encores offer equipment with a list-price reduction of $284 from a comparably equipped Encore LS, plus distinctive paint and trim, AMC said.

Available in black or white clearcoat, they feature gold graphics and bumper inserts and gold-colored aluminum wheels. Other features are dual remote mirrors; AM/FM stereo with electronic tuning, six speakers and cassette player, and luxury sport cloth wing seats.

Diamond Edition Encores are $7,570 for the three-door, $7,770 for the five-door.

The Diamond Edition Alliances are equipped the same as the special Encores and also have a rear decklid luggage rack. The Alliance package is $317 below a comparably equipped Alliance DL, AMC said.

The Diamond Edition Alliance two-door is $7,715; the four-door, $8,015.

The Jeep CJ-7 package includes special sunshine yellow or Adriatic blue clearcoat metallic paint, black or white soft top, black highback denim vinyl seats, chrome front bumper and rear bumperettes, decor group, dual chrome outside mirrors, P215/75 R15 Wrangler mud or snow tires and color-keyed styled wheels with trim rings.

AMC said the package offers a price reduction of $400.

It is available on CJ-7s ordered with five-speed manual transmission, conventional spare tire, removable front and rear carpet, 20-gallon fuel tank, body side steps, center console and fog lamps.

The Diamond Edition CJ-7 is $8,756 with the special package and required equipment.

Misubishi promotes 3

FOUNTAIN VALLEY, Calif. — Mitsubishi Motor Sales of America, Inc., has promoted Ronald Jones to district parts manager, San Francisco Region, and Tom McGraw and Bruce Decker to district sales managers, Pacific Northwest Region and Southeast Region, respectively.

Truck production remains above 60,000 for week

Domestic truck production last week remained at about the same level as the previous week.

The truck makers slated assembly of 61,097 units, 1.65 percent more than the previous week's 60,106. The output leads the year-ago tally of 40,654 by 50.29 percent.

During the first four weeks of production this year, the manufacturers produced 228,995 trucks, 77.43 percent above the 129,059 finished during the same period last year.

Nine truck assembly facilities put in extra hours last week, the same number that worked overtime the previous week.

At General Motors, Janesville (Wis.), Lordstown (O.) and Pontiac No. 5 worked two shifts Saturday (Jan. 28).

Ford Motor Co. scheduled extra daily hours at all six of its truck plants. Ford plans to follow the same overtime schedule this week, with the addition of Saturday (Feb. 4) hours at Kansas City.

Cutlass Supreme tops '83 sales

DETROIT. — Oldsmobile Cutlass Supreme overtook Ford Escort as the No. 1 nameplate for 1983.

The sales leaders were:

1.	Olds Cutlass Supreme	331,179
2.	Ford Escort	326,333
3.	Chevrolet Cavalier	259,397
4.	Chevrolet Caprice	238,930

Week's output holds steady at Canadian plants

Canadian auto makers slated production of 23,636 units last week, 96 units behind the prior week's 23,732 and 13.65 percent better than 20,796 assembled in the year-ago period.

So far this year, the manufacturers have built 83,716 cars, leading the 1983 total of 69,797 by 19.94 percent.

Truck production last week was targeted at 15,642, down 229 units from the previous week's 15,871 and 55.55 percent better than the 10,056 units completed in the year-ago week.

Year-to-date, truck production grew to 58,159, a strong 75.80 percent ahead of 33,081 units which were assembled in the first four weeks of 1983.

Chrysler Corp. estimated production of 1,431 Dodge Caravans, 1,240 Plymouth Voyagers and 606 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 10,918.

President's carriage

Cadillac custom-built for White House

This Cadillac Presidential limousine, specially built for the President's use, has a wheelbase of 161.5 inches, 17 inches longer than the wheelbase of the standard Cadillac limousine. The car was custom-built and armored by Hess & Eisenhardt, a division of O'Gara International, Ltd. Story and other pictures on Page 7.

World is rosy at NADA; optimism becomes reality

By Robert M. Lienert
Editor

DALLAS. — For the first time in four years, dealers attending NADA's 67th Convention and Exposition are riding tall in a strong market as the industry continues its comeback.

Everything seems to be coming up roses in Dallas, and that's a far cry from the situation in the most recent conventions.

The optimism that characterized last year's affair in Las Vegas turned out to be properly placed, and the recovery that so many predicted at that time came about as the year progressed.

So the mood here in Dallas is chipper, particularly among those who remember the dark convention days in 1982 and 1981.

The 1982 and 1981 watchword of "survival" and the 1983 choice, "recovery," have turned into "success" or "profit" or "volume" or any one of a number of other upbeat choices this year.

Early registrations indicate that attendance this year may pass 15,000, up from last year's 12,000. Some 3,600 dealers are expected to be included in that total—a gain of 23 percent over last year.

That will make this year's convention the best attendance since 1980 in New Orleans. Record turnout was close to 19,000 in Las Vegas in 1979 — the last year before the agonizing downturn in the auto business. This is the first NADA convention held in Texas since the Houston affair in 1969.

William C. Turnbull, who will be succeeded as president during the convention by James P. Jennings, told the opening session that he was concluding his term with "a certain sadness," but a "feeling of satisfaction."

Noting that 4,000 dealers have gone out of business in the past four years, Turnbull said that the survivors have learned to be more professional managers and have learned to do more with less.

"We have learned skills which will serve us well in the future," Turnbull said.

Referring to the current scene, he said, "We have returned to prosperity . . . the retail automotive business has succeeded while many were predicting its demise."

The result, he said, is that dealers have earned credibility as retailers and the industry has earned credibility in the business and financial communities.

"That credibility will be our most important asset as we face the future," Turnbull said.

Saying that NADA has achieved credibility, as well, with government officials, manufacturers and the public, he reported that membership was up for the year and that participa-

Auto industry expected to buy 5,684 by 1986

Major robot growth charted for U.S.

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — The U. S. auto industry will purchase as many as 5,684 new robots between 1984 and 1986, auto makers have told the U. S. International Trade Commission (ITC). American producers of robotics stand a good chance of filling those orders, the FTC has concluded.

In a report issued by the ITC on the competitiveness of U. S.-made robotics, the agency said that American firms judged U. S. robotics to be more competitive than their foreign counterparts in terms of design, energy efficiency, durability, supply and training.

Non-U. S. products were judged more competitive in terms of price and maintenance, the ITC said.

The report focused extensively on the auto industry as the pre-eminent user of robotics in the U. S.

The car makers told the ITC that 25,000 robots could be engaged in automobile production by 1990. The industry bought 3,080 robots between 1979 and 1983, with most of the purchases made during 1981. Most of the industry's purchases during the five-year period were for robot welders.

Only 293 robots were bought from foreign firms during 1979-83, the ITC reported.

If the 25,000 figure is correct for auto-making robots in use by 1990, the auto industry hopes to realize a 20-percent labor reduction, the ITC said.

But most of that labor savings would come from robots other than those used in spot-welding applications. Indeed, the market for robot welders is expected to diminish in coming years as plants reach a saturation point in the use of this particular robot.

The trade commission expects the use of paint-spraying, machine-loading, machine-unloading, material-handling and assembly robots to experience the most growth by decade's end.

Breakthroughs in the precision capabilities of detail-oriented assembly robots will be particularly important in determining the range of robot use beyond the 1990s.

The ITC indicated that General Motors has plans to put 5,000 robot arms into assembly applications and 4,000 more robots into machine-loading and

breaking news

AMC engine options outlined

DEARBORN.—American Motors is working to adapt its small XJ Jeep series for Renault's 2.1-liter turbocharged diesel engine. Meanwhile, Renault is working to turbocharge the 2.2-liter gasoline version of the engine, which has just been introduced for Fuego and Sportwagon in the U. S. The 1.7-liter gasoline engine that is to be built in Mexico (earlier story on Page 202) is being adapted for Alliance and Encore and may be turbocharged. A 1.4-liter engine is the current powerplant. The 1.7 is already in the European versions of those two cars.

Subaru recalls 78,000

WASHINGTON.—Subaru of America will notify owners of some 78,000 1979 vehicles it will check the EGR system and replace parts if needed—at no cost to owners—if clogging has increased NOx emissions from the tailpipe. Because the problem is affected by the amount of lead in the gasoline, most states in the Far West are not included in the service campaign.

Willingham is named Quality Dealer of Year

DALLAS.—James A. Willingham, president of Boulevard Buick, Long Beach, Calif., has been named 1984 Time Magazine Quality Dealer of the Year by Time Magazine.

He will serve as official national spokesman during the year for all 65 recipients of the Time Magazine Quality Dealer Award (TMQDA).

He also is president of Boulevard Lincoln-Mercury and Boulevard British-Saab in Long Beach.

Willingham's award was announced by Michael M. Carey, director of the TMQDA program for Time at the NADA convention here. Willingham and the other recipients were honored at the opening business meeting.

Born in Risco, Mo., Willingham attended the University of Missouri on a football scholarship and served with the United States Marine Corps.

He began his automotive career when, in 1950 after moving to Long Beach to recuperate from a football injury, he joined Ed James Studebaker, where he worked for two years as a salesman.

After leaving Ed James in 1952, he worked for several dealerships in the Long Beach

Iacocca talks with Mitsubishi; Korean mini eyed for U. S.

No joint venture yet for Chrysler

By Matt DeLorenzo
Los Angeles Reporter

PASADENA, Calif.—Chrysler Corp. and Mitsubishi executives concluded regular quarterly talks recently with no definitive agreement on a joint venture, Chrysler Chairman Lee Iacocca said at a press conference here.

It was hinted, however, that a Japanese-designed, Korean-built minicar may be under discussion.

Iacocca was here to receive an honorary degree from the Art Center College of Design. He delivered the keynote address during commencement ceremonies.

He met for nine hours with Mitsubishi President Toyoo Tate at the La Costa Resort in Southern California. It was Tate's first meeting with Iacocca in his new job as president of the Japanese car company.

According to a statement released prior to the news conference, Iacocca said he "discussed a wide range of subjects, including: The current car and truck market in the U. S., the outlook on Japanese imports, a variety of marketing and distribution matters and the outlook for joint assembly of Mitsubishi-designed products.

"We had a very productive discussion and resolved several short-term issues," Iacocca said. "Regarding longer-term issues, we agreed to continue our investigation of several alternate possibilities for joint assembly."

Iacocca said those possibilities for joint assembly are not limited to the U. S. and hinted that

Supermarket concept explained at NADA

Ford plans new dealer P&A centers

By Francis J. Gawronski
Service Editor

Ford Motor Co. is offering its dealers "a new concept" in automotive parts and accessories merchandising.

The concept—the creation of a supermarket-type retail parts store within a dealership — has been field-tested by Ford Parts and Service Division (FPSD) for almost a year in selected Ford dealerships with "encouraging results," according to Chester V. Barion, general manager, Ford Parts and Service Division.

Chester V. Barion

A model of the store concept is being shown to dealers for the first time in the Ford exhibit at the NADA Convention and Exposition in Dallas this week.

"The new Dealership Retail Parts Store is aimed at helping our dealers capture an increased share of the do-it-yourself (DIY) market," Barion said.

Barion noted that the aftermarket is a $50 billion market.

"Of this amount, 20 to 30 percent is accounted for by the do-it-yourselfers," Barion said. "There is a market for the dealers to get into. This is an opportunity for dealers to pick up some parts business they didn't have before."

• Barion said the parts-store design, layout and merchandising elements are designed to stimulate dealership customer traffic and sales of Motorcraft and other Ford Motor products, beyond those already purchased by DIYs at Ford and Lincoln-Mercury dealerships.

According to Barion, the dealership retail store would feature products an automotive DIY might need for working on his or her vehicle—Ford and Motorcraft replacement parts and accessories, waxes, oil, lubricants and tools. Other items, including rally jackets, caps and T-shirts, also will be featured.

"Participating dealers can offer do-it-yourself customers the advantages of technical expertise not always available at other parts stores, as well as full-service, high-quality, original-equipment manufacturer's parts," he said.

"And if a customer prefers, the dealer will install the parts in the dealership service department," he said.

A dealership retail store, Barion said, also has the potential to increase customer traffic and sales for new and used-vehicle sales departments.

"We are prepared to offer the program to any dealer who wants to get into it," Barion said. "We have a structured program that will make it easy for dealers to get into the program."

• Complete plans for eight different parts-store layouts, from 300 to 1,200 square feet in size, along with comprehensive training and merchandising support, are available to participating dealers from FPSD, according to Barion.

Those stores, he said, could be situated in a portion of the dealership's new-car showroom, or in other high-visibility, high-traffic areas.

Barion emphasized that the retail-parts store would not replace the traditional parts department normally used by service technicians and wholesale customers.

"Each Dealership Retail Parts Store would be brightly illuminated and color-coordinated with open-rack, self-selection displays of attractively priced merchandise," Barion said.

FPSD supplies the racks, bins, counters and point-of-purchase promotional material.

The program, Barion said, also involves a comprehensive training course that includes manuals and a school that takes the dealer and his service manager through the concept of retail selling.

"As dealers progress with this, they will learn how to operate in the retail parts areas," Barion said. "The concept is not new. It has been successful in dealerships in Europe.

• "The Dealership Retail Parts Store concept can be a dramatic new business opportunity for Ford and Lincoln-Mercury dealers," Barion said, "and based on the encouraging test results so far, the program will be offered to all dealers interested in pursuing this concept."

Barion said he is confident that the program will expand to include "100 or more dealers during 1984."

"Obviously, all dealers can't get into it because they don't have the space," he said. "However, many do have space and will join the program which will do much for their parts business."

Working with a selected group of dealers, FPSD has been market-testing the parts-store concept for about a year in several regions of the country.

Test program stores are located at Krieger Ford, Columbus, O.; Southwest Ford, Oklahoma City; Sound Ford, Renton, Wash. (near Seattle), and at Bill Currie Ford's two locations in the Tampa area, the main dealership as well as a showroom at the Tampa Bay Center Shopping Mall.

Doug Krieger, vice president of Krieger Ford, said he was satisfied with progress of the parts store, which has been in operation about nine months at his dealership.

The dealership installed the retail store in the lobby of what once was a diagnostic center, Krieger said.

• "The project is coming along real well," Krieger said. "Business has increased every month since we opened the store. We try to give the operation a one-stop-shop effect. Once a person buys a car here, he can come back for all the parts and accessories he may need in the future."

In addition to selling items the DIYs can install, Krieger said the store offers items for jobs the DIY doesn't want to do or can't do. In either case, the dealership's service department can do the installation.

The 1,200-square-foot store is open from 9 a.m. to 9 p.m. Monday through Friday and from 8 a.m. to 5 p.m. on Saturday.

"It (the store) is taking a little while to build up," Krieger said. "Right now, we are at the break-even point. The big job is getting people to know the store is here."

To publicize the store, Krieger said the dealership is running monthly newspaper advertisements and sending flyers to its customers.

Another dealer who is satisfied with the retail store concept is Ted Gumerson, of South-

Special Cadillac reportedly due from Pininfarina

TURIN. — Rumors of a new super Cadillac convertible with a body built by Pininfarina have been circulating here.

The deal reportedly calls for 8,000 bodies a year, beginning in 1986 and running until 1991. Pilot production is expected late in 1985.

Pininfarina reportedly will carry out design, engineering development and testing prior to actual production. The car will be marketed in the $50,000 range.

It is understood that Pininfarina-built bodies, completely finished and trimmed, will be air-freighted to the U.S. for final assembly.

GM conferred with other Italian coachbuilders before signing the deal with Pininfarina.

New concept in dealership merchandising

Ford Parts and Service Division has been field testing a new concept in automotive parts merchandising—a supermarket-type retail auto parts store within a new-car dealership — at selected Ford dealerships around the country. Shown above is the retail parts store operated by Krieger Ford, Columbus, O.

Driving away Lynx diesels

The Detroit and Cincinnati Lincoln-Mercury districts were joint hosts for a Lynx diesel driveaway. Dealer participants toured Ford's Wayne (Mich.) plant and then headed for home in 50 Lynx diesels.

Shop volume for 1983 shows gain of 9.8 pct.

By Francis J. Gawronski
Service Editor

Last year was one of the better ones for the service and parts departments of the nation's new-car dealerships, according to the Automotive News Service Index.

Service and parts business for the 12 months of 1983 amounted to 109.8 percent of the volume recorded for all of 1982. It was the fourth highest yearly gain in the 23-year history of the Service Index.

The record for yearly gains was posted in 1978 when shop volume rose 12.0 percent above the shop business done in 1977, followed by a 10.6 percent gain in 1976 and 10.4 percent in 1968.

In 1982, dealership shop volume for the 12 months increased 8.5 percent, which was the sixth highest in the history of the Service Index.

Last year ended on the strong side with service and parts business in December amounting to 110.4 percent of volume for the same month in 1982.

December also marked the 10th consecutive month in which shop volume registered an increase over the year-earlier month.

All indicators used in the Service Index recorded good gains in both the 12-month period and December of 1983. December also marked the seventh consecutive month that all indicators were on the upside.

Gross profit on all labor, parts and accessory sales — the most important indicator to dealers—was up a healthy 10.5 percent over the 12-month period in 1982, while profits in December topped the year-earlier month by 4.6 percent.

Repair orders written were up 3.4 percent for the full year and 3.6 percent in December.

Total labor sales — customer-paid and warranty—ended 1983 up 8.9 percent over the previous year, while December's gain in this category was 9.8 percent over the year-earlier figure.

Shop parts sales (those used on both customer-paid and warranty jobs) jumped 10.8 percent for the year, while December's business increased 11.4 percent.

Sales of all parts and accessories advanced 12.4 percent in all of 1983 and 18.0 percent in December.

Figures used in the Service Index are compiled from monthly reports on service and parts business from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
110.4*

	Dec., '83 vs. Dec., '82	12 mos., '83 vs. 12 mos., '82
Gross Profit on All Labor and P&A Sales	+ 4.6%	+10.5%
Repair Orders Written	+ 3.6%	+ 3.4%
Total Labor Sales (Customer & Warranty)	+ 9.8%	+ 8.9%
Shop Parts Sales (Customer & Warranty)	+11.4%	+10.8%
Sales of All Parts and P&A	+18.0%	+12.4%

*—Survey by Automotive News shows that dealers' service and parts business in Dec., 1983, was 110.4 percent of business in Dec., 1982. Service business in the 12 months of 1983 was 109.8 percent of business in the corresponding period in 1982.

Sperlich named president of Chrysler Corp.

DETROIT.—The board of directors of Chrysler Corp. last week elected Harold K. Sperlich president of the corporation.

Harold K. Sperlich

Sperlich, who recently assumed responsibility for Chrysler de Mexico, played an important role in Chrysler's recovery and restructuring.

He directs all of the company's major operating activities in the U.S., Canada and Mexico, including manufacturing, procurement and supply, engineering, product development and product design.

The post of president has been vacant since J. Paul Bergmoser retired in 1981.

Sperlich spearheaded development and launch of Chrysler's highly successful K-car and has also been the architect of other front-drive products.

Sperlich has been president of North American Automotive Operations since April 9, 1981.

He joined Chrysler in 1977 after 20 years with Ford.

Court reveals joint-venture formula

Corolla major factor in GM-Toyota pricing

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Details on how General Motors and Toyota will set the price of their joint-venture car — to be made by Toyota at GM's Fremont (Calif.) plant and to be sold by Chevrolet dealers — were made public when GM moved in federal district court to dismiss the suit filed against it by Chrysler Corp.

These figures had been carefully blacked out by the Federal Trade Commission when it released some of the memo of understanding between the two companies.

Separately, Toyota moved to dismiss the suit, which was also filed against it. Toyota joins GM in its arguments and makes separate ones as well.

GM released full data to show no collateral restraints are imposed on each other by the agreement, but the two dissenting FTC officials—Michael Pertschuk and Patricia Bailey—argued that because both the Corolla and Chevette are part of the subcompact Market Basket Index used to set a price, both have incentive to raise prices.

This, in effect, will raise all new-car prices, since both are price leaders in both countries. Because sales of Toyotas are limited by the "voluntary" quota, it has double incentive to raise prices on each unit.

• The JV car will be a slightly modified Corolla and in the Market Basket of 10 models used to adjust prices for the JV car the Corolla will be weighted at 30 percent versus 70 percent for the remaining nine models—an indication that both companies consider the current Corolla a marketing threat three times greater than the other nine models (Chevrolet Cavalier and Chevette, Ford Escort, Honda Accord and Civic, Mercury Lynx, Nissan Sentra, Subaru DL and VW Rabbit).

In another section of the memo, agreement is reached that the initial price of the 1985 JV car will be between 8 percent and 11 percent lower than the Toyota Corolla after adjustments are made for feature differences.

Each model year, the JV selling price will be found by applying the Market Basket Index to the selling price for the previous model year — although there is an "escape clause" that can be used by the companies if the result differs significantly from current market conditions.

The only other "confidential" figures that became available last week from court documents are the division of financial liability from adverse judgments from product liability litigation. Costs not covered by product liability insurance are "apportioned 60 percent to Toyota and 40 percent to GM."

In court papers, GM stresses that the "antitrust laws were designed to protect competition, not competitors" and says Chrysler expects to be "injured" only because GM will be

A Regal concept

Convertible Concepts, Blaine, Wash., has begun marketing a Buick Regal convertible made by Convertible Specialists, Gardena, Calif. Electrically controlled top has a headliner and is made of European cloth. Very little back-seat room was sacrificed in the conversion, the company said.

Nissan plans for UK plant watered down

LONDON. — The Nissan plan to build an auto plant in the UK is a mere shadow of the original scheme, at least in the early stages.

It is for British assembly of 24,000 Japanese KD kits annually, an investment of $70 million and employment of no more than 500 direct jobs. The startup, at a site still to be selected, will be in 1986.

This contrasts with the ambitious 1981 plan of 200,000 full production units, an investment of $450 million and direct labor of 5,000.

However, when Nissan officials confirmed details of the long-awaited project here last week, they dangled the hope of a second phase with 80 percent (European) local content. Nissan will make a decision on this in 1987.

The initial KD operation will serve only the UK market, where Nissan sells about 100,000 cars annually. The kits will be counted in the unofficial 11 percent agreement on Japanese market penetration in the UK.

The possibility of Nissan sourcing cars for the rest of Europe from the UK will therefore happen only if the company goes ahead with the second phase, and production for that would not begin until the 1990s at the earliest.

Unless federal deficits are controlled

Iacocca fears '85 auto recession

By Geoff Sundstrom
Washington Reporter

WASHINGTON.—A recession will start in the auto industry in mid-1985 unless "runaway $200 billion deficits" are brought under control, Chrysler Chairman Lee Iacocca warned a congressional subcommittee last week.

Iacocca spoke in support of a bill that would establish an industrial policy council and a controversial $5 billion industrial development bank.

He also said he was critical of his "peers for not speaking out on gut issues of the day for fear it will hurt their sales for the next 10 to 20 days."

Iacocca told subcommittee members that America's and American industry's number one "gut problem" is the "proliferation of ad hoc policies."

He said "industrial, trade, guarantees, antitrust, offsheet financing, regulatory and all those other government policies which daily affect the industrial life in America . . . are confusing, uncoordinated and sometimes conflicting."

Iacocca pointed to a newly released study by Data Resources, Inc., an independent economic consulting firm, that said the U. S. economy will become weaker if its manufacturing base continues to deteriorate.

Quoting from the study, Iacocca said, "It would be unfounded optimism to believe the service sector will somehow sustain our economic progress on its own."

The report was funded by Bethlehem Steel Corp., Ford Motor Co., Goodyear Tire & Rubber Co., John Deere & Co. and others.

Iacocca ticked off a long list of government decisions and programs that economically benefit some businesses over others, including government policies toward agriculture, defense, foreign economic aid, antitrust, education, corporate mergers and the banking industry.

He said, "Everybody's covered except those old smokestack industries where all the jobs are."

He indicated that the problem with American policy makers is that they are afraid to "experiment."

Iacocca said legislation establishing an industrial competitiveness council would "be a quantum leap" toward establishing the "middle ground where American industries and individual American companies can get a fair shake and be allowed to compete on an equal footing with their world competitors."

"The guiding principal of this council should be equality of sacrifice," Iacocca said.

He cautioned the lawmakers that an industrial development bank could become a "red herring" that could hold up the entire plan, but said federal money would be needed to aid basic industries.

The key to granting that aid, Iacocca said, must be assurances of a "quid pro quo."

Sports-car maker to go it alone in U. S. after Aug. 31

Porsche to end pact with VWoA

TROY, Mich.—Volkswagen of America has confirmed that Porsche AG intends to end its 15-year-old marketing arrangement with VWoA Aug. 31 and set up its own dealer network for distribution of its cars in the U. S.

Porsche's intention to go it alone in the U. S. was first reported by Automotive News Sept. 19, when existence of a Porsche plan to take control of its own U. S. distribution was discovered during the Frankfurt International Auto Show.

Porsche declined to confirm it at that time, but Chairman Peter Schutz told Automotive News that "the clock is running."

A VWoA spokesman said his company was surprised by Porsche's stated intention, noting that negotiations have been under way for several months.

VWoA took over as sole importer of Porsche cars in 1969, when it established a Porsche-Audi Division. Audi is a part of Volkswagenwerk AG in Germany, but there is no connection between VW and Porsche in Germany.

In 1983, Porsche sold a record 21,831 cars in the U. S., up more than 50 percent from 14,407 in 1982. So Porsche is evidently not dissatisfied with VWoA's sales performance. Porsche cars sell as quickly as they come into the U. S. On Jan. 1, there was a paper-thin 17-day supply of Porsches and most of those were in-transit sold orders.

In fact, the strong position of Porsche at present in the U. S. may be the reason for the upcoming split. Schutz had said earlier in Frankfurt that Porsche was considering several options for its long-range planning and that the feeling was that the change should be made when Porsche was in a position of strength—which it is right now.

There were 75 Porsche dealers in the U.S. in 1969 when VWoA took over and there are currently 330, all except one dualed with Audi. The one exception is dualed with Volkswagen.

VWoA said there would be no change in the Audi dealer network and its projections indicate that sales gains this year will more than exceed the loss of Porsche sales. VWoA expects Audi sales to soar to about 80,000 this year from 47,936 in 1983.

It appears likely that Porsche's primary motivation for the move is to enhance its profits by eliminating a middleman.

Ad agency to drop Porsche after Porsche drops VWoA

By Joseph Bohn
Marketing Editor

Doyle Dane Bernbach will resign the estimated $9 million Porsche account after Porsche's contract with Volkswagen of America runs out Aug. 31.

Porsche will handle distribution of its own cars in the U. S. after that date, as Porsche of America.

Robert Rees, president of DDB's Detroit office, notified Porsche President Peter Schutz of his intent in a letter on Jan. 30.

Rees said there had been no request from VWoA or Volkswagen in Germany to relinquish the account, but that agency management felt there would be too much of a competitive conflict to service both Audi, a division of VWoA, and Porsche of America.

He likened it to handling Mazda, for example, with which many Volkswagen dealers are dualed.

"If Porsche becomes Porsche of America and doesn't renew its agreement, they become like Mazda of America or Subaru of America" with all the potential conflicts, he said.

In his letter, Rees urged Schutz "to continue to run

Two-thirds of managers are unqualified, study finds

PRINCETON, N. J. — More than two-thirds of managers are either unqualified or holding positions not matched to their abilities, according to a study by the Personnel Survey and Research Group (PSRG).

Only 32 percent of managers in industry today are both qualified for their positions and in the right jobs, the study said.

The study was based on research conducted by PSRG from 1970 to the end of 1983. David G. Mayer, chairman of the group, said the study included 106 companies and 1,550 managers. Nearly 40 percent were auto dealers and aftermarket companies.

Mayer claimed that the employment of unqualified managers and the mismatching of able managers can lead to a drain on productivity within the organizations.

According to the study, 35 percent of managers have the ability but are misemployed.

The report cited an example of those in sales and marketing positions who have little skill in sales and marketing, but who have other specialized or technical abilities. It went on to say that 33 percent of managers should not be managers at all.

They were moved along and moved upward because of seniority, dead weight, favoritism, sloth and a dozen other so-called reasons, but not because they had the real abilities to do the actual job.

It cited specifically sales and marketing persons who were rewarded because of their success as salespersons though they did not have management abilities.

Aston Martin names Philpenn Distributors

GREENWICH, Conn. — Aston Martin has appointed Philpenn Distributors, Bryn Mawr, Pa., as an Aston Martin dealer.

Christian Hueber, managing director of Philpenn, said his company will be representing Aston Martin in the Mid-Atlantic region.

New with Olds

Robert B. Bernard Jr. signs on as Oldsmobile dealer in Lafayette, La. With him is Donald F. Albers, Oldsmobile's Houston zone manager.

Ford Aerospace wins Space Station job

DETROIT.—Ford Aerospace & Communications Corp. has been selected by the Lyndon B. Johnson Space Center of National Aeronautics & Space Administration for a one-year, $82,065 study of a steered multiple beam antenna (MBA) system for NASA's anticipated 1990's Space Station.

The Space Station will have multiple uses, such as control base for scientific experiments, manufacturing in space and repair and maintenance of other satellites. This requires that communication and tracking links be established between the Space Station and the various platforms and vehicles located about it at both far and short ranges.

Increase through '88 expected to be moderate

Gains seen for synthetic rubber

HOUSTON. — The International Institute of Synthetic Rubber Producers, Inc. (IISRP), has released preliminary estimates on 1983 rubber consumption and an update of its long-range forecast for the U. S. and Canada.

M. J. Rhoad, managing director, announced the estimates as compiled by the Institute's North American Section Statistical Committee.

It appears that rubber consumption in North America in 1983 recovered significantly from 1982's level but still is lower than the level achieved in 1968.

Projections of rubber demand through 1988 show a compound annual growth rate of 2.3 percent, which is slightly below the generally accepted GNP projections of 3 to 4 percent annually.

Because of the development of longer wearing and smaller tires, the proportion of total rubber used in tires is projected to decline from 61.9 percent in 1983 to 61.4 percent in 1988. During this same time span, however, synthetic rubber is expected to increase from 72.3 percent to 72.7 percent of the total.

A large portion of this strength is expected to be in ethylene-propylene rubber in non-tire applications.

• The "other" category shows a large increase, compared with last year's projections. This is due basically to the fact that, beginning in 1983, improved statistics were developed on consumption estimates and as a consequence 1982 figures were found to be low.

For the first time, the committee has projected the consumption of carboxylated SBR latex for North America. The figures show a 2.2 percent annual growth rate.

Rhoad said the Institute forecast is compiled by averaging the results submitted by all participating companies. In the case of total rubber projections for five years forward (1988), the standard deviation was 4 percent of the average.

Companies participating in this study were American Synthetic Rubber Corp., Copolymer Rubber & Chemical Corp., Denka Chemical Corp., Firestone Synthetic Rubber & Latex Co., General Tire & Rubber Co., Phillips Chemical Co., Polysar Ltd., Goodyear Tire & Rubber Co. and Uniroyal, Inc.

The membership consists of 45 companies from 19 countries and represents more than 90 percent of the world's synthetic rubber production capacity, excluding countries with centrally planned economy.

Our policy is simplicity.

There are two kinds of insurance coverage for the business you're in.

One is the kind you have: most likely a patchwork of two, three or even more policies designed for businesses in general. You're paying for coverage you don't need. And you can't add coverage you want without attaching even more policies.

The other kind of coverage is ours. A specialized business insurance concept started in 1922. Our single policy offers all the coverage you need now with the built-in flexibility to add coverage without adding policies. You pay for the coverage you need now and no more until you need more.

Our policy works. Because our policy is designed specifically for the automobile dealership.

It's that simple.

The Specialists.

Ad agency named for Pennsylvania emissions testing

WEST CHESTER, Pa. — Precise Communications, a locally based advertising agency headed by Elaine Freeman, has been awarded a $31,620 state contract to design a public relations campaign to explain the controversial auto-emissions testing program to the state's 3.1 million motorists.

Joyce Tomana, spokeswoman for the Pennsylvania Department of Transportation (PennDOT), said Precise Communications was one of five agencies that submitted proposals.

In its proposal submitted to the state, Precise Communications said its campaign would "dispel public misconceptions and negative attitudes and stimulate enthusiastic compliance" with the new testing program. The slogan coined by the agency to highlight the campaign is: "We'll all breathe easier."

Tomana acknowledged that the $31,620 earmarked for the contract would cover costs only for the design of the campaign. She said additional costs would be incurred for production and distribution of campaign materials.

The testing program is scheduled to begin June 1.

With in-house computer system

Central Motors improves operations

NORWOOD, Mass. — Given today's roller coaster economy, more and more auto dealers are making a similar and important investment: The purchase of an inhouse computer system.

One that has made this move is Central Motors here, one of the largest Chrysler-Plymouth dealerships in retail sales in New England.

Charles Colter, dealership general manager, explained his firm's decision to automate: "We had a computer system installed two years ago, but it really wasn't designed to do the things we wanted it to do. So, we had it removed.

"Since that time, we've pretty much known what we were looking for in a computer system. And we recently found it," he said. "After looking at the offerings of three companies, our computer experience told us that the ATS System was best suited for us."

The ATS System Colter referred to is a Key 300 Computer from Auto Tell Services, Inc., Villanova, Pa. A turnkey system, it is designed to cover each of the computer services required by a dealer.

One of the key features of the system is said to be its "real-time" ability to update all related files simultaneously and instantly as new data is entered.

"Each of our employes accepted the computer installation with a great deal of enthusiasm," Colter said. "They looked forward to it because they knew it would help us become more productive."

• Frank Orlowski, dealership controller, said, "The computer has greatly enhanced our cash flow. With the manual system we had to close our accounts receivable somewhere between the 10th and 15th of the month in order to prepare statements for mailing by the end of the month.

"Now, we don't cut off until the 25th of the month and are able to include all charges through that day in the statements mailed the following day," he said.

The switch to a computerized system was hardly a snap decision at Central Motors. The agency has been a solid fixture in Norwood for 37 years. Its facility, comprising 24,000 square feet, includes 18 service bays, 25 body shop bays and a new-car showroom to accommodate five cars.

Asked for reasons behind his firm's success, Colter said, "While skills and effort are important, of course, it is the attitude of our people that is the most important ingredient to success. To me, proper attitude is caring, interest, empathy, desire for earnings and friendliness."

The approach to selling at Central Motors is worth noting. Fifteen of the 56 employes are directly involved in sales — Colter, two sales managers and 12 sales people.

Colter believes in hiring sales managers who have no management experience. Most often, they have less than two years of automotive selling behind them.

"I do my own training. Marketing automobiles is a one-on-one people business," he said. "Too often, we forget that proper people in proper jobs spell success. And, of course, it remains a challenge because changes do occur among the people involved."

Central Motors is a Pacemaker Dealer. That means, Colter said, the firm must sell more than 1,200 new cars a year to qualify. Currently, the dealership is selling at the 1,400 rate.

Dana joins sponsorship of racing-driver's group

ORLANDO, Fla. — Dana Corp., Toledo, has become an associate sponsor for the Championship Drivers Assn. (CDA), which is made up largely of drivers participating in the Championship Auto Racing Team (CART) Indy-car events.

Tom Fairhurst, Dana group vice president, said the company plans a full range of race-oriented activities.

"Our participation in the Championship Drivers Assn. is one step in our total commitment to Indy-car racing," Fairhurst said.

During the 1983 race season, Dana sponsored the 500 Mile Pit Crew Awards with cash prizes, trophies and national recognition for the mechanics and pit crew members of the winning cars in the Indy 500, the MIS 500 and the Pocono 500, Indy-car racing's Triple Crown.

"There is a direct connection between the race mechanic and our customer, the professional car mechanic," Fairhurst said in explanation of the emphasis on mechanics in the company's race program.

Fairhurst also revealed plans for the company's sponsorship of a Dana Motorsports Club for professional car mechanics. The club will operate through the auto parts jobbers who carry Dana's brand names, Perfect Circle, Victor, Spicer, Wix and Weatherhead.

The company also is the sponsor of the Dana-Rex Mays Classic in Milwaukee and of the Victory Trophy for the MIS 500 Race at Michigan International Speedway.

The MIS Trophy also carries with it a check for $100 per month for life to the winning driver. Starting in 1984, Dana will sponsor the Jimmy Bryan 150 at Phoenix.

In auto repair industry

Remanufactured parts find a niche

By John W. Riley
Staff Correspondent

FRAMINGHAM, Mass. — Remanufactured auto parts may engender a bit of suspicion in car owners, but not in the minds of repair shop and dealership owners who often have found them more durable, less expensive and of proven quality when compared with new parts out of a car makers' warehouse.

One of the titans of this recycling industry is Harry A. Holzwasser, president, Arrow Automotive Industries, which has been in business since Holzwasser's father started the firm in 1929 by rebuilding armatures for electric motors.

Harry A. Holzwasser

Today Holzwasser not only has his major factories here but also a nationwide network of used part suppliers. He also has factories in South Carolina, Arkansas and California, and agencies that supply him with parts in Japan, Taiwan and Korea.

Holzwasser said his business is thriving because times have changed. People aren't buying so much chrome and glitter. People buy cars today for transportation."

Thus, in 1982, according to Holzwasser, Arrow cleared $2.19 million on $80.4 million worth of remanufactured parts that went to some 3,500 automotive warehouses, distributors and jobbers.

• Still, that is only a small part of the total auto aftermarket business, estimated at $3 billion annually. The business overall involves everything from spark plugs to complex components to tires, according to Holzwasser.

Holzwasser said the auto industry is not paying much attention to the consumer when it makes cars of plastic parts that cannot be remanufactured, uses welds instead of rivets and screws in key places.

He noted that people are keeping their cars longer, from three to 10 years. Some parts give out in these periods and owners or repairmen turn to the remanufacturers for replacement parts.

Arrow plants turn out about 50,000 components a week. Old parts are broken down at these plants, repaired, re-assembled and tested to determine that they meet the specifications of the originals.

The cost advantages are obvious, Holzwasser said. A new master brake cylinder may cost $86.50, and a remanufactured one $36.75. New starters can run $193.85, while a remanufactured one will cost $87.80.

Comparable figures for wiper motors are $87.50 ($68.10), water pump $62.14 ($35.15), disk brake calipers $128.50 ($40.95), clutch $171.55 ($99.45) and alternator $194.15 ($85.25), Holzwasser said.

• Holzwasser has a vision that an old car could be put through a complete reconditioning using remanufactured parts and come out the back of a shop as workable as when new.

He said the logistics would be complicated, and the cost between $2,000 and $5,000, limited to a few standard makes. But he insisted it would be justified when the consumer compares this to the price of a new car.

Right now, this is just a dream for Holzwasser because the cost of setting up a plant to perform this complete reconditioning would interfere with his present needs to expand to meet just the current needs for remanuafactured parts.

Arizona firm sees big year for its Michael bearing

By Sheldon Engel
Staff Correspondent

MESA, Ariz.—A small manufacturing company here believes that 1984 will be "the year."

The company is Michael Mfg., Inc., holder of a patent for a product that is getting some recognition.

K. C. Cluff, director of marketing for the company, has, it seems, been plugged into a telephone for the three-year history of the company, telling everyone about the patented device that reportedly solves the problem of oil leaks at the rear main bearing seal for engines that build up oil pressure.

The new modified rear main bearing was developed by Ron Michael, a veteran Chevrolet mechanic here. It's a Clevite bearing modified by Michael Mfg. It has been installed in more than 8,000 vehicles with 100 percent success, according to Michael.

The Michael bearing has been utilized as standard replacement by Simpson Buick, Downey, Calif., and by Tamaroff Buick, Inc., Southfield, Mich. Their enthusiasm has led them to act as distributors for their areas.

A shop foreman at a Chattanooga Chevrolet dealership said, "We have had 100 percent success with this bearing in stopping rear main leaks. We had one 1977 Monte Carlo with a 350 engine that had been in our shop seven times for a rear main bearing leak.

"We installed new seals and new pan gaskets each time and never stopped the leak," he said. "We installed a new modified rear main bearing and the leak was stopped completely."

The new modified rear main bearing, according to Michael, has additional oil grooves milled into the lower half of the bearing as well as on the thrust flanges which direct all the excess oil forward away from the seal, thereby eliminating the pressure on the rear main seal.

In addition to eliminating rear main oil leaks, the new design also lubricates the bearing more efficiently and prevents scoring on the bearing, he said.

Perhaps the strongest testimonial for Michael's development occurred in the area of marine engines.

Now it has appeared in Chrysler Corp.'s Direct-Connection Performance Parts Catalog for 1984 and is being field-tested by a large fleet company.

Cluff said the new modified rear main bearing has been utilized in such countries as Italy, Switzerland, England, Japan and Malasia.

After suffering several years in soft economy

Chemical industry lists gains in '83

The chemical industry, pulled down by several years of a sagging national economy, posted healthy business gains during a much-improved 1983, according to the Chemical Manufacturers Assn.

CMA, in its annual economic survey, says industry sales rose 9.6 percent during 1983 over the year before, to $189 billion. The sales gain, CMA notes, was the result of an increase in the volume of products sold—and not the upward movement of prices.

Myron Foveaux, CMA assistant director of government relations for international trade and economics, says chemical industry executives expect surging business conditions to continue this year; "1984 looks like a boom year," Foveaux says. "Industry executives responding to our survey clearly expect the nation's economy to stay up and inflation to stay down."

Sales during 1984, he says, are expected to rise 13 percent above those posted last year.

Even better news for the industry than the increase in sales, Foveaux says, was the 15.5 percent rise in net income after taxes during 1983—or more than double the average annual net income growth rate of 7.6 percent over the last decade.

Industry executives expect net income this year will jump 24 percent over 1983. "Much of this will come from loading up unused capacity, resulting in lower unit cost," Foveaux says. Capacity utilization should be around 78 percent in 1984.

During 1983, Foveaux says, the average operating rate improved to 73 percent from the 69 percent of 1982. "Improvements in shipments, net income and operating rates are at least partially due to inventory build-up," he notes, "and should be considered with some caution in forecasting 1984 performance."

One of the most encouraging developments for the industry during 1983, Foveaux says, was the 10.8 percent increase in research and development spending. "This shows continuing faith that new products must be developed and that it will take large research and development spending to get them."

Capital expenditures are expected to be increased 10 percent during 1984. Foveaux says only 26 percent of this increase is expected to go for new facilities: "This clearly puts the emphasis on modernization and renovation, rather than new capacity installation."

One development that dimmed an otherwise bright year was continuing deterioration of the industry's international trade performance. Exports were $19.8 billion during 1983 — or nearly equal to those of 1982. Imports rose almost 9 percent to a projected $10.3 billion. Consequently, the industry's trade balance slipped 9.4 percent, the third decline in as many years.

"Export performance has suffered not only from the high dollar value," Foveaux points out, "but also from poor economies abroad and new competition in export markets. Imports have been encouraged by the cheap currencies and low prices of other countreis, but also in the latter part of the year by the booming domestic economy."

Although the picture for the next year or so is bright Foveaux says, "industry executives are well aware of competitive problems that lie ahead." For example, he notes that many companies are deemphasizing organic commodity chemicals in favor of specialty and performance chemical products.

The significance of this shift, he says, is a fundamental one: "The traditional petrochemical producers have heavy overcapacities even after shutting down a number of plants. At the same time, gas-rich countries such as Saudi Arabia, Kuwait, Mexico, Canada and eventually Indonesia, are building plants that will increase world-wide overcapacity."

The economics of production favor the gas-rich countries, he says. And although production from these countries "will not swamp the U. S. market," Foveaux predicts, "it will tend to capture export markets and eventually show up in the U. S."

Subaru's top service dealer

Lynch Subaru, Santa Monica, Calif., receives the Key Service Dealer of the Year Award from Subaru of America. The award is given annually to the one Subaru dealer nationally who achieves overall excellence in the various service department requirements of the program. From left, are Nick Greene, district service manager, Subaru of Southern California; Brian Denn, service manager and Claes Merald, general manager, Lynch Subaru; Larry Goodwin, key dealer administrator, Subaru of America; and Jim Jamison, service manager, Subaru of Southern California.

Turbocharging kit for Fiero offered by California firm

SAN JOSE, CALIF. — Pfaff Turbo has introduced an aftermarket turbocharging kit for the mid-engine Pontiac Fiero, a system that the maker claims will offer a 36-percent boost in horsepower.

When installed, the Pfaff system increases the maximum output of the Fiero's 2.5-liter four-cylinder engine from 92 to 145 horsepower, according to Ron Ford, vice president of marketing for Pfaff.

Ford said Pfaff-equipped Fieros are capable of 0-60 MPH times of nine seconds or less, compared with 11.6 seconds for a stock Fiero.

The kit will retail for $1,774 and can be installed by a qualified mechanic within four hours. The drivetrain is warranted for 24,000 miles or 24 months, a guarantee that is underwritten by Fred Simpson & Associates, Palm Desert, Calif.

Ford said all of Pontiac's 3,000 dealers have been recruited to sell the Pfaff system. Pfaff has the capacity to make a turbo system for each Fiero sold, but Ford estmated the market size at 5 percent of all first-year Fiero sales (roughly 4,500 of 90,000 sales).

The Pfaff turbo system includes IHI turbocharger with built-in wastegate (maximum boost of seven pounds), turbo boost gauge, cast-iron exhaust manifold, cast-aluminum intake plenum chamber, electronic control, chrome-plated intake tubing and automatic fuel enrichment (under boost).

Popularity of U.S.-built cars increases with executives

PEABODY, Mass. — The resurgence in the appeal of American-made autos is reflected in a recent survey of 15,500 small- and medium-sized U. S. companies conducted by Growth Resources, Inc. (GRI), a consultant firm on executive compensation.

In a nationwide study, GRI found that the proportion of American-made automobiles increased, from 1982 to 1983, from 70 to 75 percent of all company cars. The big losers were the European models, which declined from 20 to 25 percent.

The average price of the American models was $12,097, about half the $24,939 price of the average European model. The price of the European models ranged as high as $60,000.

Richard J. Bronstein, president of GRI, said, "There appears to be renewed acceptance for both the quality and style of American-made luxury vehicles.

"Although the Mercedes, BMWs, Jaguars and Porsches are still popular, the Lincolns, Cadillacs and Chrysler luxury models have become much more acceptable with company officers."

The average company car purchased by the executives surveyed costs $14,500, down $500 from the 1982 average of $15,000. Over 88 percent of the smaller company chief executive officers surveyed drove company-owned and operated cars.

The automotive data was part of GRI's annual Officer Compensation Report developed through a national survey of 15,500 small- and medium-sized companies.

It reports the compensation of over 2,000 chief executives and officers in 565 manufacturing, technology and service companies.

Fuji to use CVT by Van Doorne in Subaru Justy

TOKYO. — Fuji Heavy Industries, maker of Subaru cars, has reached an agreement with Van Doorne's Transmissie, of The Netherlands, for local manufacture of a continuously variable transmission.

The CVT will be used in the Subaru Justy, a one-liter front-wheel-drive hatchback to be introduced later this year.

Mitsubishi Electric has worked with Fuji on the development of a magnetic particle clutch, which will be used in conjunction with the steel belt drive to give variable ratios.

Fuji claims that on the Japanese 10-mode test, the use of the CVT improves fuel consumption by 20 percent compared with a conventional torque-converter automatic.

According to a company spokesman, Fuji has no plans to sell the CVT to other auto makers.

Year's production 47 pct. ahead of 1983

Makers schedule 166,850 cars

By Joe Wilssens
Staff Writer

U. S. auto makers slated production of 166,850 units last week, a slight increase over the 165,639 autos assembled the previous week and 51.38 percent greater than the 110,223 produced in the year-ago week.

The production total for 1984 climbed to 779,823 units, up 47.87 percent from 527,405 units built in the comparable period last year.

Breakdown for the week by company was: General Motors, 63.63 percent; Chrysler Corp., 15.88 percent; Ford Motor Co., 14.85 percent; American Motors, 2.88 percent; Honda, 1.41 percent, and Volkswagen of America, 1.35 percent.

Production during January, 1984, is estimated at 679,689, 56.09 percent greater than the 435,455 cars produced in the first month of 1983. Production estimates for last month make it the best January of auto output since 786,839 cars were produced in January, 1979.

Down last week for inventory adjustment were Ford's Dearborn and Kansas City plants. Two additional daily hours were worked at Ford's Atlanta, Chicago, Edison (N. J.), St. Louis and Wayne (Mich.) plants.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 put in two daily 9-hour shifts. Jefferson (Detroit) worked two daily 8½-hour shifts.

Working additional hours on Saturday (Feb. 4) at GM were: Bowling Green (Ky.); Detroit; Flint; Lordstown (O.); Lansing; Arlington (Tex.); Doraville (Ga.); Framingham (Mass.), and Oklahoma City.

Ford Division adds trips to sweeten dealer incentives

DETROIT.—Ford Division has added a "Global Getaway" to its mixed bag of incentives.

The contest runs from Jan. 30 to April 10 and offers 10-day/9-night trips for either a Mediterranean Cruise, including Athens; Munich/Vienna, or Hawaii.

There are four-day extensions with choice of Cairo, Istanbul, Cologne, Alaska or Vancouver available.

The contest groups dealers into big and small-dealer categories. Large dealers compete against an objective; small dealers compete among themselves for high over objective.

The sales objectives are based on all '83/'84 new Ford cars. There is a special bonus provision, giving five extra percentage points if a dealer hits a given truck objective during Jan. 30 to March 10.

There is also a special-emphasis objective on Escort, Tempo and Thunderbird. It runs from Jan. 30 to April 10. Winning it gives a dealer the four-day extension trip.

In addition, there is a Grand Travel award, with 71 trips for the large dealers and 29 trips for those in grouped competition. The special Grand Travel award includes 12-day/11-night trips for a safari in Kenya and four days/three nights to Madrid.

Nissan offers 8.8 pct. financing on pickup trucks

CARSON, Calif. — Nissan U.S.A. last week kicked off an 8.8 percent financing program on '83/'84 pickup trucks. It runs from Feb. 1 to March 31.

The program is similar to one held last year.

Under the arrangement available through participating banks and Nissan dealers, Nissan will pay interest charges over 8.8 percent up to a limit of 13.5 percent, except in California, where the cap is 14.25 percent.

Nissan credited last year's program with boosting truck sales to a record 137,355.

Advantage Corp. opens new plant in Arizona

TEMPE, Ariz. — Advantage Corp., a van conversion firm, has opened a new production facility here.

The new plant, which will produce all models in the Advantage line, has 25,000 square feet of production and office space. Tom Thiede has been named operations manager for the new facility.

Truck production for year to date is up 77 percent

Truck output last week was up 20 units from the level of the previous week.

The makers targeted production of 60,813 trucks, just ahead of the 60,793 assembled the prior week. Last week's tally led the year-ago week's output of 41,598 by 46.2 percent.

The manufacturers target January production at 254,143 trucks, nearly doubled the 128,563 assembled that month last year. Estimates for the month make it the best January of U.S. truck production since 1979, with 336,734 units.

Year-to-date, there have been 289,504 trucks produced, leading the year-ago total of 163,571 by 76.99 percent.

Nine truck facilities worked additional hours last week.

All six of Ford's truck assembly plants worked two daily 9-hour shifts while Kansas City also worked Saturday (Feb. 4).

At GM, Detroit, Lordstown (O.) and St. Louis scheduled additional hours Saturday.

Car output rises 21 pct. in Canada; 22,956 for week

Canadian auto makers slated assembly of 22,956 units last week, 20.97 percent ahead of the prior week's 18,976 and 30.77 percent greater than 17,554 produced in the year-ago week.

To date this year, the manufacturers have built 102,012 autos, 14.21 percent ahead of the 1983 total of 89,321 at this point.

Truck assembly last week was targeted at 16,261, down 233 units from the previous week's 16,494 and more than doubling the 7,138 units completed in the year-ago week.

So far this year, truck duction has grown to 75,27., a strong 82.93 percent ahead of 41,148 units which were assembled in the first five weeks of 1983.

Chrysler Corp. estimated assembly of 1,689 Dodge Caravans, 1,535 Plymouth Voyagers and 692 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 15,523.

Arrow Automotive plans expansion in Arkansas

MORRILTON, Ark. — Arrow Automotive Industries plans to add more than 57,000 square feet of remanufacturing and warehouse space to its facility here, according to Harry A. Holzwasser, Arrow president.

Construction is slated to begin in February or March, and is expected to take about six months to complete.

Domestic dealer total up for first time since 1955

By John K. Teahen Jr.
Managing Editor

For the first time since 1955, there has been a full-year increase in the number of dealerships handling domestic makes of passenger cars.

The annual AUTOMOTIVE NEWS census found 20,841 dealerships in operation on Jan. 1, 1984, up 42 from the 20,799 counted a year earlier.

The 27 lean years (1956 through 1982) saw the total plunge from 41,018 to 20,799, a drop of 49.3 percent.

Last year's upturn coincided with the overall improvement in the fortunes of the domestic auto industry. There were moderate dips in the first and second quarters and then a strong recovery that put the total on the plus side for the year.

Chrysler Corp. and Ford Motor Co. were the chief factors in last year's gain. Chrysler added 227 dealers, its biggest increase since 1965, and Ford went up 94. It was Ford's greatest upswing since 1957 when it was building a retail organization for a car called Edsel.

Elsewhere, there were dips last year of 120 outlets for General Motors, 63 for American Motors-Renault and 28 for Volkswagen.

That's an aggregate advance of 110. A change in the number of intercorporate duals cut the industry's gain to 42.

All figures in this article and in the accompanying tables refer to the net change in the dealer population, both for the individual corporations and car lines and for the domestic industry as a whole.

Honda is not included in the domestic dealer census. The company builds one model (the Accord four-door sedan) in the U. S., but some 80 percent of its sales in this country are imports. Honda is counted in the AUTOMOTIVE NEWS imported-car dealer census.

Last year's gain followed four of the toughest years dealers have experienced in the long, steady decline.

Things turned sour in 1979, not a bad year for the industry, but a real loser for its retailers. The dealer total dropped by 672. Then came the 1980 disaster: 1,607 domestic dealerships bit the dust.

In 1981, the loss was 988, followed by a decline of 881 in 1982.

The losses continued early in 1983, but at a much slower pace. The first quarter saw a decline of 48 outlets, and that number dipped to 28 in the second quarter.

Then came the turnaround. There was a gain of 94 domestic outlets in the third quarter and a further advance of 24 in the fourth.

Here are the domestic dealer figures by quarters during the year:

Jan. 1, 1983	20,799
April 1, 1983	20,751
July 1, 1983	20,723
Oct. 1, 1983	20,817
Jan. 1, 1984	20,841

Franchise totals moved upward for nearly every domestic make last year, and some of the advances were tremendous.

Dodge added 252 franchises; Plymouth, 244, and Chrysler, 223. At Ford Motor, there were

Recovery outpacing '76 comeback, Smith says

CHICAGO.—Auto sales are recovering at a faster pace than in 1976, following the 1974-75 recession, General Motors Chairman Roger B. Smith told a luncheon at the Chicago Auto Show. Through January, he said, '84 model-year sales rose nearly 5 percent more than in the 1976 recovery. Smith said GM plans to "Saturnize" all its vehicles—to apply the principles of design, engineering and manufacturing learned in the Saturn small-car project across the board. When is Saturn due? "I intend to drive the first Saturn off the line long before I retire in 1990," Smith said.

DALLAS.—NADA rang down the curtain last week on its 67th annual Convention and Exposition — a meeting characterized by soaring attendance, optimism, business transactions and learning experiences.

Dallas seemed an eminently suitable spot for the convention. The ebullient mood of convention-goers fitted in well with the city's booming downtown building spree and the wide-open Texas spaces.

Convention attendance topped 17,000, second only to the record of 19,000-plus established in 1979 in Las Vegas. Included was an alltime record walk-on attendance of 3,000.

More than 5,300 were dealers and managers, compared with 3,500 a year ago. Total attendance last year was 12,000.

Workshops in most instances played to overflow crowds. Combined attendance at the 140 workshop sessions approached 20,000.

Still another record was established by the exposition in attracting 220 exhibitors—more than ever before. The show's 143,000 square feet made it the largest in NADA history.

Hours of the Exposition were more restricted than they had been in previous years and some exhibitors complained. But NADA said many exhibitors reported doing more business in one day of the show than in three days of previous expositions.

NADA said this resulted partially from a new credit-card system for registered dealers which enabled them to order services and products directly from the companies exhibiting.

Van exhibitors in an exposition annex felt that the entrance was not well marked and that many conventiongoers did not realize there were two exposition halls. Traffic in the van hall did seem sparse. Exhibitors there were also unhappy because they had to move out the day before the convention ended to make room for another show coming in.

• Despite the general euphoria of the convention, some dealers pointed out that the optimism should be tempered with caution. While they expect that the business climate will be pleasant throughout this election year, they suspect that times may be less happy after the fall elections.

They wonder whether interest rates can avoid rising again if Congress and the White House are unwilling to deal with the bloated federal deficit. Some have product concerns. Nobody is sure what the General Motors reorganization is going to mean nor how it will trickle down to the field.

In setting a 1984 course for

Strategy includes reshuffled car divisions, product diversification

Smith: GM to be reshaped giant by end of decade

By Marjorie Sorge
Labor Editor

General Motors' car division reorganization is only part of an emerging strategic plan which will reshape the giant auto maker by the end of the decade.

Included in that new strategic plan is not only reshuffling the car divisions by the '86½ or '87 model year but also accelerated diversification into nonautomotive areas like electronic, chemical and metallurgical products, according to GM Chairman Roger B. Smith.

"If I get to do what I want to do, we will be more diversified," Smith told AUTOMOTIVE NEWS in an interview. "We will still be basically an automotive transportation company. We may even have new transportation products that we don't have now. I think we will have an electronics products division or sector that we don't have now that will be a substantial piece of our business."

According to Smith, GM will also branch out into metallurgy, chemistry and other hi-tech fields that would be byproducts of current GM programs.

In the interview, Smith also said:

1. GM is planning to cut both personnel and the number of car lines by the time the reorganization is completed.

Under the reorganiaztion plan, GM created two "super groups," the big-car and small-car groups, made up of seven divisions (the five car divisions, Fisher Body and GMAD). The small-car group consists of Chevrolet, Pontiac and GM of Canada, while the large-car group is Oldsmobile, Cadillac and Buick.

2. There will be one new car introduced under the reorganization before the "no-model-year" Saturn, a subcompact due out in the late 1980s.

3. Robert C. Stempel and Lloyd E. Reuss, the vice presidents and group executives who will run the big and small-car groups, respectively, are currently housed at the Renaissance Center in Detroit, developing the strategy for their groups. According to Smith, the two men will likely never have offices at the General Motors Building. He indicated they will be close to their divisions.

"It wouldn't surprise me at all for Stempel to say (to Reuss), 'It's not in my group, but if

1983 sales of $74.58 billion also an alltime high

GM earns a record $3.73 billion

By Kathleen Hamilton
Financial Editor

When General Motors reported its 1983 financial results last week, it was hard to find a performance indicator that didn't set a record.

Sales of $74.58 billion were a record. Fourth-quarter sales of $20.82 billion were an any-quarter high. Profits for both 1983 ($3.73 billion) and the quarter ($1.30 billion) were records. Income per share was a fourth-quarter record.

GM of Canada and GMAC both set revenue and income records. And GM's results no doubt led the U. S. auto industry to a record profit total for 1983.

GM's earnings of $3.73 billion ($11.48 a share) were nearly four times 1982's $963 million ($3.09 a share).

Sales of $74.58 billion were 24 percent more than 1982's $60.03 billion. Unit sales also were up 24 percent — from 6.24 million to 7.77 million.

The old GM profits record was set in 1978, when GM made $3.51 billion — $222 million less than last year — but sold 9.48 million vehicles, 18 percent more than last year's 7.77 million.

Last year's sales value, meanwhile, was 18 percent higher than in 1978, and 12 percent higher than the old GM record of $66.31 billion, set in 1979.

"It's certainly true that we did get a lift from the rising economy, but our improved operating performance was the key," GM Chairman Roger B. Smith said in announcing the 1983 results in a speech at the National Press Club in Washington.

"For example, if we had operated in 1983 at our 1983 volume but at our 1978 performance rates, we would have barely broken even last year," he said.

Smith said GM still "has a long way to go" toward a record performance if its profits are adjusted for inflation.

GM's before-tax income skyrocketed from $22.8 million in 1982 to $4.97 billion last year — a far larger increase than the hefty after-tax increase — because GM paid out 45 percent of its income in taxes last year. In 1982, it garnered a tax credit of $252.2 million. GMAC contributions to GM income aren't included in the pre-tax figures.

In addition, GM said a new accounting procedure for foreign currency translations reduced its 1983 profits $422.5 million.

Almost all the pre-tax earnings increase — $4.22 billion worth — was attributable to domestic income increases, according to the GM figures.

After-tax income generated in the U. S. more than tripled, from $1.08 billion to $3.47 billion, on a sales gain of only 31 percent (from $50.32 billion to $66.16 billion).

Unit sales in the U. S. rose 27 percent, from 4.04 million to 5.12 million.

• In Canada, net income of $592.3 million was a $626 million turnaround from money-losing 1982.

(Those are the consolidated figures reported by GM in Detroit, and don't exactly match the figures issued from GM of Canada because of exchange rates and adjustments for cross-border shipments. GM of Canada reported record sales of $13.8 billion (Canadian) and net income of $675.6 million.)

Results from Europe weren't so rosy. Sales rose 8 percent to $7.97 billion, and GM set a record in market penetration, but it turned in a loss of $228.3 million. The company attributed most of the loss to the change in accounting procedures, but the competitive European market has led all makers to cut their margins there. Using the old accounting methods, GM broke even in Europe in 1982, with profits of $6.2 million.

GM also lost money in 1983 in Latin America ($15 million) and the Australia/Oceania region.

GMAC set another income record, this time $1 billion, compared with its old record of $688 million, in 1982.

GM added more than $3 billion to its cash pot during the year, ending 1983 with a stunning $6.22 billion in cash and marketable securities.

It spent $2.60 billion on R&D, up 20 percent from 1982's $2.18 billion.

Capital spending of $4.01 billion was 35 percent less than 1982's $6.21 billion. Capital spending is expected to be about $6 billion this year, GM said.

• GM contributed $180 million to its executive bonus plan, the first contribution in four years and the maximum allowable under the 1977 formula. As GM promised the UAW, the sum is less than allowed under the 1982 formula, which was approved by stockholders shortly after UAW members granted the company concessions.

Another $26.5 million accrued to the Performance Achievement Plan for 1983, the first such accrual since the plan was approved in 1982. It is the estimate of what will be paid to about 500 top executives for 1983 if they and GM achieve long-term performance objectives. Payouts are scheduled for 1985 and 1987.

Profit-sharing payouts for 1983 to lower-level salaried workers and hourly workers will amount to $322 million. GM paid $892 million in dividends during the year.

Fourth-quarter profits of $1.30 billion ($4.11 a share) were nearly nine times the $145 million (45 cents a share) made in the fourth quarter of 1982. Quarterly sales of $20.82 billion were 50 percent more than the $13.88 billion of a year earlier. Unit sales for the quarter rose 48 percent, from 1.43 million to 2.12 million.

Meet Chevy's Astro Van

General Motors' new downsized M-van is slated to debut this fall in panel and passenger configurations, and a prototype of Chevrolet's version, the Astro, is on display this week at the Chicago Auto Show. It is just under six feet high and sits on a 111-inch wheelbase. Overall length is 176.8 inches and base curb weight is about 3,100 pounds. The Astro is a rear-wheel-drive vehicle, and four-speed manual transmission is standard.

Talk is of good times at Chicago Auto Show

By Roger Rowand
Engineering Editor

CHICAGO. — There's a long-standing auto show tradition here that calls for car factory brass to introduce new models, boast of recent accomplishments — or lament a lack thereof — and make some predictions.

Once again this year, the days immediately preceding the Chicago Auto Show were filled with press conferences and lavish parties, and once again the execs were touched with early annual enthusiasm as the Chicago show this week signaled that spring can't be far off.

C. P. (Chuck) King, senior vice president, sales, at Nissan Motor Co., was as enthusiastic as low inventories and caps on car imports allow. Nissan is introducing two new cars at this show.

King called the economy strong but cautious, with interest rates still too high.

"We just ended a record sales year," he said. "Our dealers sold more cars in 1983 than ever in our 24-year history — 521,902 units, up 11 percent from the 470,246 sold in 1982. That will be difficult, and probably impossible, to match in 1984, because we are faced with allotments in the fourth year of voluntary import restrictions."

He said the still-unofficial allotment calls for 31,000 more passenger cars for Nissan beginning in April, but 1983 sales included 66,000 units from inventory.

Truck volume last year jumped up 27.5 percent, to 137,000 units from 108,000 in 1982. King said he expects his firm's 1,095 U. S. dealers to retail 150,000 trucks in 1984.

• Nissan recently said in the United Kingdom that once it decided to produce cars there, it could "concentrate on the possibility of adding passenger cars to truck production in Tennessee," King said.

The truck launch in Tennessee was impressive. Product quality is good and employe pride is strong, he said.

"Study teams will be involved," King said. "Honda has been successful building in the U. S. and that, coupled with our success in Tennessee, is changing things. Some of the concerns the Japanese might have had at one time about quality of cars being produced in the U. S. are no longer there."

The firm's Tennessee plant is producing 8,000 trucks a month and will move to a rate of 8,400 in March.

A reporter asked King to comment on reports that Chicago-area Datsun dealers are demanding a downpayment before allowing prospects to test drive and are adding a $1,000 pack to each car's price.

"Unfortunately, that's a supply and demand situation," King said. "We do not condone it, and it's not unique to our product. It's the same with others in short supply. The dealer is going to get only so many cars and he's going to try to maximize his profit. That's just the way it is."

Ford Motor Co. used the show to debut a hands-free mobile phone concept, the EXP Turbo Coupe, a GT three-door hatchback Mustang and a limited edition Mustang GT 350 convertible. The company also said a new LTD will go into production here and in Atlanta late summer, 1985.

Philip B. Benton Jr., vice president, sales operations Ford North American Automotive Operations, said his company will have 20 percent of the U. S. market, possibly sometime this year. Ford in 1981 had 16.6 percent; in 1982, 16.9 percent; in 1983's fourth quarter 18 percent, and now has 18.5 percent.

Dealers bullish, cite strong sales prospects

By Al Fleming
Industry Editor

DALLAS. — Richard J. Gillis figures his timing couldn't be better.

Last June, he bought a Ford dealership in Sterling, Va. Its break-even volume was 950 new vehicles a year, but it sold only 256 vehicles in 1982 and was $300,000 in the red.

In the first half of 1983, Sterling Ford ("Home of the Silver Dollar Deal") sold 200 vehicles. That's when Gillis took over and sales took off.

In the second half of 1983, the new owner sold 555 new vehicles to wind up with 755 sales for the year.

"I'm excited about the next two, three, four years," gushed Gillis during a respite at the NADA convention last week.

"People are perceiving that now's a good time to buy a car," he said. "They're feeling good about their jobs and the cost of money and are turning in their old clunkers on new ones they've postponed buying."

Other dealers also apparently feel good about sales prospects this year.

A survey taken by Market Facts, Inc., on the first day of the NADA conclave indicated nearly unanimous agreement among dealers that the auto market and the U. S. economy will continue to expand this year.

Commissioned by Rusty Jones, Inc., an auto appearance-care firm, the survey reported that 96 percent of 179 dealers questioned expect auto sales and dealership profits will climb in 1984.

Market analysts say the bullish outlook by the nation's auto retailers is significant because dealers, on the front lines of consumer wars, are readily able to assess buyer attitudes and economic health.

"We had a good 1983 and ex-

German pizazz

One of the stars at the Chicago Auto Show is this high-performance luxury Vanagon from Volkswagen of America. Called the Carat, the vehicle is a special job built in Hanover, West Germany, to measure reaction in the U. S. to a Vanagon outfitted as a German grand touring limousine. That's Carat, Rabbit owners, not carrot.

January's U. S. industry total passes 583,000

Domestics lead new-car sales surge

By Jenny L. King
Staff Writer

New-car sales shot up 32.37 percent in January, combining a 40.88-percent domestic gain with a 7.46-percent increase for the imports. It was the largest advance for the domestics since the 48.01 percent notched for June, 1983, and the 583,429 units sold were a January best since 1980.

The U. S. auto makers' 583,429 January sales compared with 414,140 a year earlier. Two years ago, an embarrassing 368,138 sales were reported the first month. Import sales reached 195,129, up from 181,585 in 1983 and second only to 217,690, the record set in 1980.

Grand total for the auto industry in January was 788,558, up 32.37 percent from 595,725 in 1983.

Third-period domestic sales were largely responsible for the January high: They were up 64.26 percent, to 252,020 from 153,428 last year. Domestic sales

Table on Page 41.

annualized to 8.9 million based on late-January results.

For the month, General Motors reported a 35.45-percent sales gain, climbing to 344,679 from 254,470 in 1983. Ford Motor Co. was up 51.68 percent, to 139,222 from 91,789. Chrysler Corp. enjoyed a 47.31-percent increase, going to 69,391 from 47,105.

American Motors went to sales of 14,271 from 13,965, an increase of 2.19 percent. Volkswagen was up 29.74 percent, to 7,219 from 5,564, and Honda multiplied its year-ago total by seven, reporting sales of 8,647 compared with 1,247 last January, its first month in the domestic market.

• GM claimed 59.08 percent of the domestic market in January, down from 61.45 percent in 1983. Ford sales accounted for 23.86 percent, up from 22.16 percent. Chrysler earned 11.89 percent, up from 11.38 percent. AMC slipped to 2.45 percent from 3.37 percent. VW had 1.24 percent compared with 1.34 percent a year earlier, and Honda rose to 1.48 percent from 0.30 percent.

AMC, with just the Eagle in its lineup, was the only domestic make to fall short of year-ago sales. AMC was down 57.81 percent, to 1,948 from 4,617. Its counterpart, Renault, had a 31.82-percent increase, to 12,323 from 9,348.

At Chrysler Corp., Plymouth was up 43.69 percent, Chrysler was up 58.56 percent and Dodge was up 42.83 percent. Ford Motor Co. showed Ford was up 52.14 percent, Mercury up 56.09 percent and Lincoln up 33.98 percent.

For GM, Buick and Oldsmobile boasted record January sales. Buick was up 32.04 percent, to a record 68,550 from 51,917 last year. Oldsmobile's 88,385 was up 29.97 percent above 68,005. Pontiac was up 61.08 percent, Cadillac was up 28.84 percent and Chevrolet was up 34.12 percent.

With 25 selling days in the month this year and last, the daily rate was up 40.88 percent, to 23,337 from 16,566.

Where auto market was in January

	Total Sales	Pct. of Total
SUBCOMPACT	110,604	14.21

IMPORT	195,129	25.06
TOTAL	778,558	100.00

The imports' 195,129 January total included records for the month for Jaguar, Mercedes-Benz, Mitsubishi (an any-month record as well), Saab and Volvo.

Jaguar was up 52.68 percent to a record 1,055 units. Mercedes climbed 50.17 percent to a record 6,381. Mitsubishi's 3,333 was more than twice the 1,279 sold a year earlier. Saab was up 30.76 percent to a record 2,708 and Volvo's record 9,392 was up 13.69 percent from 8,261 for the same month, 1983.

Sales by market class in January included: Intermediates, 25.95 percent; imports, 25.06 percent; compacts, 16.92 percent; subcompacts, 14.21 percent;

But they hold to 63-day supply

New-car stocks rise to 1.4 million

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers added almost 120,000 units to their new-car inventories during January, but an improved sales rate kept the days-supply level at 63, unchanged from a month earlier.

The Feb. 1 inventory totaled 1,477,399 units, compared with 1,357,995 on Jan. 1. A year ago, the domestic new-car inventory totaled 1,180,291, a 71½-day supply.

The current situation of higher unit count and healthy days-supply figure reflects this year's vastly improved market. Although a 63-day supply is very close to the theoretical ideal of 60 days, the Feb. 1 unit count is highest for any month opener since Dec. 1, 1981, when 1,491,078 new cars in stock were a burdensome 83-day supply.

All corporate makers except Volkswagen of America added to their unit totals during January, but the lion's share of the increase was at General Motors.

GM opened February with 60-day supply, up only slightly from 59 days on Jan. 1 despite addition of more than 80,000 units to its stockpile.

Ford Motor Co. had a 69-day supply Feb. 1, unchanged from a month earlier. Also unchanged was Chrysler Corp., which held steady at a 66-day supply.

American Motors opened February with a 94-day supply, up from 84 a month earlier, while VWoA trimmed its U.S.-built stockpile to 72 days Feb. 1 from 87 a month earlier. Honda had a 19-day supply of U.S.-built Accords, off a bit from 20 a month earlier.

The Feb. 1 domestic new-car inventory was divided this way: GM, 55.57 percent; Ford Motor Co., 25.80 percent; Chrysler Corp., 13.14 percent; AMC, 3.64 percent; VWoA, 1.41 percent, and Honda, 0.44 percent.

• By size class, a sharp cut in subcompact stocks moved that segment below the industry average, joining the standard and luxury classes there.

On Feb. 1, the industry had the following days supplies by market class: Subcompact, 57; compact, 76; intermediate, 63; standard, 55, and luxury, 38.

A month earlier, days-supply

Winner of two titles

Debi Brett, of the UK, won the Most Beautiful Girl in the World title as well as the title to this Dodge 600 convertible. The nationally televised beauty pageant was held in Honolulu and Dodge Marketing provided the TV production team 10 Dodge 600 convertibles for use.

Iacocca attacked by Nemet for his import-car policies

By John A. Russell
New York Staff Writer

DALLAS. — Chrysler Corp. and its chairman, Lee Iacocca, came under scathing attack by the outgoing chairman of the American International Automobile Dealers Assn. (AIADA), who claimed that Iacocca's policies in fighting imports would hurt consumers, other manufacturers and the nation's worldwide trading partners.

Thomas Nemet, in his last official act before stepping down as AIADA chairman, lashed out at Iacocca and his positions on imports and local-content legislation. Nemet claimed that while Chrysler said it is "neutral" about content legislation, it was a driving force behind passage of the measure in the U. S. House of Representatives.

He charged that Iacocca made "last-minute telephone calls to key members of Congress urging them to vote for the content bill," thus making the corporation a driving force behind its passage.

Nemet said this action by Iacocca and the corporate lobbyists took place even though Chrysler is the fourth largest importer of Japanese cars in the U. S.

A further irony, Nemet said, is Chrysler's attempt to negotiate a joint manufacturing agreement with Mitsubishi.

Nemet charged Iacocca is not concerned about the damage his tactics will cause for consumers and U. S. foreign trade policy but his only motive is the "competitive edge" restraints and local content would give his company.

Chrysler was not the only organization to come under fire in Nemet's remarks. He charged that the UAW is a partner of Chrysler in efforts to push local content legislation. And in an election year, he said, the union warchest is geared to support protectionist legislation and congressional candidates who will vote for it.

Nemet said that the AFL-CIO has earmarked $1 per member to support protectionist legislation and this would come to $13 million to push this measure.

"The AFL-CIO and the UAW have made the content bill their major priority in 1984, and they mean business," he said.

And Nemet cautioned the nearly 900 import dealers in the room that they should not think that the Administration would veto the measure since "political reality" will govern any decision particularly in an election year.

year. No name has been selected for the commercial van. A prototype of the vehicle, which Chevrolet will call the Astro, was shown publicly for the first time at the Chicago Auto Show. Photo on Page 3.

Downsizing plans moderate, Delphi Study finds

ANN ARBOR, Mich.—Top U. S. auto industry executives are expecting more moderate changes in fuel prices and car sizes by 1990 than they had predicted two years ago, according to a new Delphi Study by University of Michigan researchers. By 1992, the subcompact share is expected to fall to 34 percent; compacts to rise to 25 percent, and larger cars to fall to 35 percent.

GM-Toyota hearing uncovers pair of strange bedfellows

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Ralph Nader and Lee Iacocca in bed together was the highlights of last week's go-round on the future of the auto industry as impacted by the General Motors-Toyota joint venture (JV).

The scene was a hearing first called to look at the situation of GM and Toyota producing a car in Fremont, Calif.

But the House Commerce Subcommittee — determined not to be accused of interfering with the FTC as it approaches its final determination — broadened the target to the future of the auto industry in light of the JV.

Key questions: Would such a JV between the Number One and Number Three auto makers produce others? Would they be good or bad for the companies and for jobs? Would they give consumers a wider choice and lower prices or less production and higher prices?

Would they encourage outsourcing and/or runaway production? Is there no other way — except wedlock or living together — to beat the Japanese? Do the antitrust laws need changing? Or does the problem lie with slack enforcement? Or new interpretation?

Here was Nader — who has always been an antitrust buff — telling Rep. James Florio, New Jersey Democrat, to get Iacocca to explain the "ricochet effect" of GM strategy.

And here was Iacocca, free from the thumb of Henry Ford II and free from threat of Chrysler Corp. bankruptcy, saying he can "smell it" and if he can just get the data out of FTC, the whole world can get a whiff of what's going on.

• Said Iacocca: The GM-Toyota JV can "destroy" American Motors. He thought that Ford "would be yelling like hell" and the UAW would be complaining about job loss. He wondered why the UAW is willing to settle for "half a loaf" — salvaging a few jobs.

Said Nader: Ford Motor Co. and AMC (the no-shows at the hearing) are still intimidated by GM in other areas. GM is out to "crunch" the UAW and the UAW's acceptance of that "half a loaf" just shows how shortsighted and intimidated the UAW really is. As for Ford, Nader said that Henry Ford II once said that competing with GM was like "going to bed with an elephant." Besides, Nader said, "they know this subcommittee cannot do anything to stop the JV."

Said Iacocca: GM has enough money to hire lawyers and it doesn't need to have the Justice Department use taxpayers' money to come in to join GM and say Chrysler has no right to go to court.

Said Nader: Even the Justice Department wants to interfere with the courts on behalf of GM but even then Antitrust Chief J. Paul McGrath and Attorney General William French Smith recused themselves because of cases handled by their law firms while FTC Chairman James C. Miller III did not, although he had been a private consultant to GM.

Said Iacocca: Commissioner Terry Calvani — in office just 34 days — would have had to read 1,500 pages a day just to know what was in the record; yet he voted for the JV.

• Said Nader: It was an "ideological fix" — a "preordained conclusion," not even using the FTC expert who had handled the Ford-Toyo Kogyo increased equity decision or the AMC-Renault marriage.

Said Iacocca: What's the real issue? Size and power. GM sales are bigger than the GNP of all but 25 countries; add Toyota and combined sales are bigger than GNP in all but 20 countries, and in the U. S. market their sales are bigger than all the auto companies in the world. As for Chrysler, "we're just a blip."

Said Nader: In effect, big is bad because it can mean market dominance, and what happens then? It leads to GM "stylistic pornography" instead of "engineering integrity." GM and Toyota are "clones" and the product of the JV will be just "another Japanese lantern." If the product were to be a crashworthy, fuel-efficient, superclean and innovative product, then the country might be able to afford some lessening of competition.

Said Iacocca: GM wants to get rid of the Chevette, which has 90 percent local content, and substitute the JV product which will have 40 to 50 percent local content. But GM will be back any day — if they haven't been here already — to get those Fremont cars counted for their CAFE.

Both Nader and Iacocca

225 experts to conduct sessions

Computer meeting slates 20 topics

ANAHEIM, Calif.—Computer Graphics '84, the fifth annual conference and exposition of the National Computer Graphics Assn., will be held here May 13-17 at the Anaheim Convention Center.

Approximately 225 industry experts and professional educators will conduct tutorials and technical sessions on more than 20 topics in computer graphics. Covering a broad range of technology, with special emphasis on microcomputers, the conference program is organized around 25 tutorials and more than 70 technical sessions.

"The tutorials offer training in specific computer graphics skills," said Stephen A. Mucchetti, conference director, "while papers on key developments, innovative applications and future directions in the field will be presented in the technical sessions."

The Computer Graphics '84 exposition, May 14-17, will showcase state-of-the-art computer graphics technology for use in CAD/CAM, business and management, cartography, structural analysis, medicine, animation, marketing, architecture and many other applications.

Representatives and technical staff of more than 200 leading vendors will be available to explain the products and services on display in the three exhibit halls of the Convention Center. Additional presentations will be made by computer graphics manufacturers and vendors in an exhibitor forum to be held in conjunction with the exposition.

"The exposition will be a giant marketplace," said Mucchetti. "Vendors will demonstrate their newest products and services. Users will be able to review the latest in computer graphics technology. As a meeting place for users and suppliers, this event will make a major contribution to the computer graphics industry."

NCGA has been working with several related associations and professional societies in preparation for Computer Graphics '84. Representatives for these organizations have been invited to participate as conference speakers. Members of the groups are encouraged to attend the conference to learn more about how computer graphics can affect their work.

A special attraction at the show will be the NCGA annual dinner on May 15. It will feature a series of video presentations, including a short feature film produced by Robert Abel, whose pioneering work in computer graphics and special effects has revolutionized television commercial production.

In addition to the Abel film, a video gallery will be offered during the pre-dinner cocktail hour, including videotapes of some innovative applications of computer graphics in commercial production.

Computer Graphics '84 is sponsored by the National Computer Graphics Assn., an organization of 6,300 professionals and 49 major corporations dedicated to developing, promoting and improving computer graphics applications in business, industry, government, science and the arts.

This year, more than 25,000 people are expected to attend the five-day conference.

As of Dec. 31, 119,000 net square feet of exhibit space—73 percent of the total available—had been sold to 177 companies for the exhibition.

An additional 25,000 square feet have been reserved for a total commitment of 86 percent of the available net square feet.

As a result, the exposition will be at least 2½ times the size of the association's 1982 event, also held in Anaheim. NCGA expects more than 220 exhibitors at Computer Graphics '84, a 15-percent increase in number of exhibitors over 1982.

ASE group elects officers, directors

WASHINGTON. — Robert W. Schrandt, corporate service manager, Toyota Motor Sales, USA, Inc., Torrance, Calif., has been elected chairman of the National Institute for Automotive Service Excellence (ASE).

In addition to Schrandt, the following officers were elected: Joe D. Mills, state director of vocational education, Tallahassee, Fla., vice chairman; Burck E. Grosse, director, products service training, General Motors, Warren, Mich., treasurer, and Gerald E. Donahue, CAT, Donahue's Auto Service, Columbus, S. C., secretary. Ronald H. Weiner remains as president.

Others named to the Executive Committee were Lillian Bates, manager, service training programs, Parts and Service Division, Ford Motor Co., Dearborn; R. Michael Cheverier, CMAT, CMTT, Texas Garage, Amarillo, Tex., and Eldon G. Holbrook, manager, marketing training, Amoco Oil Co., Chicago.

But German auto makers are worried by prospect of shorter work week

BMW notches 20 percent sales gain

By Richard Feast
European Editor

MUNICH. — Sales revenues by BMW recorded another 20-percent increase last year, Chairman Eberhard von Kuenheim said.

It is the culmination of a decade of solid growth for the West German auto maker. Production of passenger cars in 1983 was a record 421,000, an 11-percent improvement over the previous year.

Prospects for car and motorcycle sales this year are good. But the company will make no production or sales forecasts — in large measure on account of the possibility of the introduction of a 35-hour work week in the whole of German industry.

This reduction from a 40-hour week is one of the two major concerns facing German auto makers at the beginning of 1984. The second is the proposal to introduce lead-free gasoline in the country from 1986.

• These two subjects are occupying German auto makers far more than any other. They fear that their competitive performance will be harmed, though the auto industry was the main locomotive which pulled the economy out of the recent recession.

BMW AG sales last year rose 22.5 percent to $4.1 billion. Worldwide sales for the group, including the 13 wholly owned subsidiaries, were up 20 percent at $5 billion.

BMW has not finalized the full accounts, and profits will not be declared until the middle of the year.

Car sales were up 11.9 percent at 422,491, mainly as a result of an increase of more than one-fifth in domestic sales (158,823).

Sales in the U. S. amounted to 56,000 and earned revenues of about $360 million. This year's expectation is of 60,000 car sales in the U. S., says BMW.

The company is committed to investments of about $360 million a year for the next five years. Its main projects, apart from modernization of existing facilities and new products, is another production facility at Regensburg and an R&D center near Munich.

Carolina dealers see demand for mid-size cars

RALEIGH, N. C. — Mid-size cars that combine good gasoline mileage and performance are the cars of the future and auto makers have recognized this, according to some North Carolina dealers.

As one dealer said, "People want more performance out of a car" and "they are buying what they want, rather than what they had to have" during the gasoline crisis.

Dealers said their customers want a car with a small engine that does not guzzle gasoline but also one that gives them more power and better road handling.

Tradeins are less frequent now, the dealers said, with the average owner trading cars only every six to seven years.

WHO will be selling Detroit II Automobiles?

FACT: Your dealership may be the only outlet in your market to buy your brand of new car. It is *not* the only place to buy used cars.

FACT: Statistically, used car buyers shop at least four dealers before making a purchase. Do you offer any *consumer-oriented* reason a buyer should purchase a used car from *you*?

The Detroit II System converts your used cars into ***inspected, warranty-backed, advertised, national brand-name Detroit II Automobiles*** — the kind consumers are demanding.

Detroit II dealers are grossing an average of 28% *more* on Detroit II Automobiles than on their 'typical' used cars. Equally important, 59% of Detroit II buyers purchased their particular car *only* because it was a Detroit II Automobile, and 91% said they would recommend Detroit II to family and friends.

Only a limited number of new car dealers in your area will be licensed to sell Detroit II Automobiles. Will one be your nearest competitor? Or

Will it be YOU

THE DETROIT II CORPORATION
P.O. Box 2200
Orlando, Florida 32802
(305) 422-1002

Detroit II is not a consignment company and is available only to new car dealers.

But November total is lowest since February

New-car registrations up 11th straight month

By Jenny L. King
Staff Writer

Registrations of new cars in the U. S. in November were up for the 11th consecutive month of 1983 though the total was lowest for any '83 month since February.

According to figures from R. L. Polk & Co., 701,448 new cars were registered in November, up 3.51 percent from 677,639 a year earlier, and off 7.31 percent from 756,795 in October, 1983. The November total was lowest for any month last year since February, when 568,663 new cars were registered.

November domestic registrations numbered 525,546, up 4.17 percent from 504,492 a year earlier. They were off 7.33 percent from the 567,107 reported in October.

Import registrations of 175,902 in November were up 1.59 percent from 173,147 a year earlier.

For readers making comparisons between present charts and those published a year ago, please note: Since September, 1983, Renault Alliance and Encore have been listed as domestic cars for both 1983 and 1982 (Alliance). Year-ago charts include the U. S.-built Renaults among captive imports and in the import totals.

• In the November marketplace, only Ford Motor Co. increased its share compared with the same month in 1982. Ford was up 2.18 percentage points, to 18.57 percent from 16.39 percent. For the month, General Motors dropped 1.43 percentage points, to 45.63 percent from 47.06 percent.

Chrysler Corp. was off 0.24 percentage points, to 8.73 percent from 8.97 percent. American Motors dipped to 1.99 percent from 2.01 percent, and miscellaneous domestics, without the support of Checker, lost their last trace of a share with less than 0.01 percent compared with 0.02 percent a year ago.

Imports were down 0.47 percentage points, to 25.08 percent from 25.55 percent.

In the domestics-only arena, GM earned 60.89 percent, down from 63.21 percent a year earlier. Ford climbed to 24.79 percent from 22.08 percent. Chrysler had 11.65 percent, down from 12.04 percent. AMC was down to 2.66 percent from 2.70 percent, and miscellaneous domestics had 0.01 percent, down from 0.03 percent.

The largest share of the market class went to U. S. intermediates in November, with their 27.28 percent of the total. Next were imports at 25.08 percent, followed by compacts at 18.15 percent, standards at 12.08 percent, subcompacts at 11.68

Automotive News analysis of new-car registrations based on R. L. Polk & Co. statistical report.

Nu-Fuel Industries opens Nashville office

NASHVILLE. — Nu-Fuel Industries, based in Loretto, Tenn., has opened a sales and marketing division office here. The firm makes fueling systems which allow vehicles to be powered by natural gas.

Don Raymond has been named national marketing director, and Art Garrett has been appointed regional account executive.

Attendance up 22 pct. at St. Louis show

ST. LOUIS.—Attendance at this year's Greater St. Louis International Auto Show increased 22 percent over the show's 1983 attendance.

Nearly 220,000 people visited this year's show compared with 180,000 a year ago. Participating dealers sold 350 cars during the show, more than double the number sold in 1983.

percent and luxury models with 5.73 percent.

The November, 1982, market was divided in this manner: Intermediates at 27.93 percent, imports at 25.55 percent, compacts at 16.01 percent, standards at 12.43 percent, subcompacts at 11.78 percent and luxuries at 6.30 percent.

Of the domestics alone, 36.42 percent were intermediates in November, 24.22 percent were compacts, 16.13 percent were standards, 15.58 percent were subcompacts and 7.65 percent were luxury cars.

• Total registrations for the first 11 months of 1983 were 8,014,526, up 14.68 percent from 6,988,889 in 1982. Two years ago they added to 7,832,399, a difference of plus 2.33 percent in favor of 1983.

Year-to-date domestic registrations of 5,795,750 were up 17.53 percent from 4,931,091 in 1982 and up 3.77 percent from 5,585,001 in 1981.

Import registrations totaled 2,218,776, up 7.82 percent from 2,057,798 for the first 11 months of 1982.

Ford, Chrysler and AMC showed gains in the 11-month market, while GM and the imports lost ground. Ford was up 0.38 percentage points, to 17.05 percent from 16.67 percent. Chrysler claimed 9.23 percent, up 0.66 percentage points from 8.57 percent. AMC was up 0.79 percentage points, climbing to 2.12 percent from 1.33 percent.

GM was off 0.05 percentage points in the 11 months, dipping to 43.91 percent from 43.96 percent. Imports dropped 1.76 percentage points, to 27.68 percent from 29.44 percent, and miscellaneous domestics shriveled to 0.01 percent from 0.03 percent in 1982.

Excluding imports, GM had 60.72 percent of the market, down from 62.31 percent. Ford held 23.57 percent, down from 23.62 percent. Chrysler stood at 12.77 percent compared with 12.14 percent, AMC was up to 2.93 percent from 1.88 percent and miscellaneous domestics dropped to 0.01 percent from 0.05 percent.

GMAC picks Thomas for overseas borrowing

DETROIT. — Geoffrey C. Thomas has been appointed director of overseas and Canadian borrowings for General Motors Acceptance Corp.

Thomas joined GMAC in Melbourne, Australia, in 1961. He has been assistant director of overseas and Canadian borrowings, treasurer of General Motors-Holden's, and director of finance for Convesco, a GM-Isuzu joint venture in Russelsheim, West Germany. He has been on special assignment for GMAC in Brussels, Belgium, since 1983.

80 Olds dealers mark $1.35 million for sales drive

The "Sunshine Olds Network," a group of 80 Oldsmobile dealers throughout Florida and south Georgia, is running a $1.35 million promotional campagin during February and March in an effort to sell 10,000 new Oldsmobiles.

The Feb. 2-March 17 effort, largest of its kind for the group, is called the "Top 45 Sales Rally" in line with its 45-day duration.

Skirboll & Garber Advertising, Pittsburgh, the group's agency, developed a series of six TV commercials, which are being linked to a national effort by Oldsmobile, "The Olds Sales Rally."

Ad budget for the dealers exceeds $1.25 million.

Along with the ad plan, Skirboll & Garber developed a $100,000 sales promotion contest and awards dinner for the "Sunshine" group's salespeople and sales managers. The contest offers more than $50,000 in cash prizes.

An awards dinner will be held March 31 at the Hyatt Hotel in Orlando, Fla., for salespeople and their spouses.

Skirboll & Garber handles a number of Olds groups, comprising some 200 dealers in 17 markets.

Chrysler-Mexico builds 500,000th car at Toluca

TOLUCA, Mexico. — Chrysler de Mexico has begun business in 1984 with "optimism and confidence," according to managing director Jerome B. York.

The firm's 15-year-old assembly plant here has turned out car number 500,000. York said that passing the half-million mark in car production and the production of the 1.5-millionth engine last November strengthens Chrysler goals for this year.

Export plans call for shipment of 4,400 vehicles to the Caribbean, Asia and the Middle East, with total exports, including engines, to generate an income of $430 million.

The Toluca assembly plant has the capacity to produce a complete unit every two minutes.

January's industry total pass 583,000

Domestics lead new-car sales surge

Continued from Page 6

standards, 9.75 percent, and luxury models, 8.11 percent.

Late-January domestic sales, up 64.26 percent, were a combination of increases for all the major auto makers. Chrysler paced the group with its 74.83-percent climb. Ford was up 67.66 percent, GM was up 59.15 percent, VW was up 48.26 percent, AMC was up 36.58 percent and Honda had no year-ago 10-day report.

Ford captured 23.51 percent of the Jan. 21-31 domestic market, Chrysler had 12.26 percent, GM had 59.98 percent, AMC had 2.44 percent, VW had 1.48 percent and Honda had 1.33 percent.

Chrysler, Ford spark gain

U.S. dealer total rises for first time since '55

Continued from Page 1

jumps of 99 for Mercury, 81 for Ford and 74 for Lincoln. Renault (Alliance/Encore) added 34 franchises.

Four of the five GM car divisions showed gains: 40 for Oldsmobile, 35 apiece for Buick and Pontiac and 20 for Cadillac.

Only three domestic lines reported declines. Chevrolet was off 40, Volkswagen dipped 28 and AMC (Eagle) was down 17. Imperial is no longer being produced, so its 425 franchises faded away.

The huge gain in franchises and the small gain in dealerships means that there is a lot more dualing in the industry — both intracorporate and intercorporate.

Intracorporate duals are those which combine car lines produced by the same manufacturer, like Chevrolet-Oldsmobile or Ford-Mercury.

Intercorporate duals are those involving cars made by different corporations, i.e., AMC-Pontiac.

• Although GM's car-dealer total dipped 120 last year, the corporation could find considerable solace in the figure. It was GM's smallest drop since 1978, and it compared with a drop of 495 outlets in 1982.

GM lost 75 dealers in the first half of 1983 and 45 in the second half. The fourth-quarter slip of 20 was GM's smallest since the second quarter of 1979.

Franchise totals for the five makes at the beginning of this year were: Chevrolet, 5,155; Oldsmobile, 3,175; Pontiac, 2,980; Buick, 2,945, and Cadillac, 1,595. Chevrolet's total is the highest in the industry.

The GM dealership count of 10,040 includes only car outlets. Adding GMC Truck, the corporate total is 10,685.

Chrysler Corp. had a lot to do with the industry's overall rise in 1983 as it posted a net gain of 227 outlets. The company opened this year with 3,864 car dealers, up from 3,637 at the beginning of 1983.

As noted, it was Chrysler's best showing since 1965, and it capped three years of improvement after 1980's horrendous loss of 596 retail outlets. Chrysler trimmed the falloff to 139 in 1981 and to 47 in 1982.

The 1983 gain was a full-year affair with quarterly upturns of 27-61-73-66 for the total of 227.

Franchise totals at the beginning of this year were Chrysler, 2,888; Plymouth, 2,831, and Dodge, 2,744.

In addition to its 3,864 car dealerships, Chrysler has eight others that handle only Dodge trucks. They are not included in the corporate car-dealership total or the Dodge car-franchise total.

Ford Motor Co. opened this year with 5,508 car dealerships, up 94 from the year-earlier total of 5,414. The gain was a pleasantly sharp contrast to losses of 553 in 1980, 276 in 1981 and 271 in 1982.

Ford had a decline of 11 outlets in the first quarter and then posted advances of 21-30-54 in the next three periods.

The company registered modest gains in its dealer count in 1973 (37) and 1977 (6), but the 1983 upswing was the biggest since the Edsel buildup of 1957. Edsel, incidentally, brought a net increase of some 700 outlets that year.

The company's franchise figures on Jan. 1, 1984, were Ford, 4,677; Mercury, 2,680, and Lincoln, 1,552.

In addition to its 5,508 car dealerships, Ford Motor has 106 that handle only Ford heavy-duty trucks. They are not included in the corporate car-dealership total or Ford Division's car-franchise total.

American Motors-Renault opened this year with 1,526 dealerships, down 63 from 1,589 at the beginning of 1983. The decline was the result of increased dualing between the two makes, since franchise totals were reasonably steady.

The Renault franchise count rose 34 to 1,356, while AMC's dipped 17 to 1,440.

An estimated 1,270 of the 1,526 dealerships handle both AMC and Renault. The dual figure is up from a year ago when it was 1,190 of 1,589.

There are 764 AMC duals with Big Three makes. Some 85 to 90 percent of them also handle Renault.

Volkswagen had 906 dealers on Jan. 1, down 28 from 934 a year earlier. VW has an estimated 135 duals with other domestic makes.

In the table accompanying this article, all VW dealerships are listed as "exclusives within corp." That's because Volkswagen of America produces only one line of domestic cars. The dealerships also handle VW imports and many have Audi and/or Porsche, which are imported by VWoA. But this is a census of domestic dealers.

Attendance up, workshops jammed, optimism abounds

NADA parley: Boomtime in Dallas

Continued from Page 1

the association. James P. Jennings, the incoming president, assigned top priority to H.R. 1415, the anti-fleet subsidy measure.

"We have nearly 200 co-sponsors for this bill, nearly half of the House of Representatives," Jennings said. NADA will lead the fight to get the bill passed, he said, "but it will take the active support of all dealers to make it law."

The bill, he said, is good for dealers and consumers alike.

"It stands for fairness and it deserves to be passed," he said.

• Other goals for 1984 as listed by Jennings included a continuing fight against domestic-content legislation, support for the Dingell odometer bill as well as another Dingell bill which would provide federal incentives to states which enact mandatory belt-use laws.

Domestic-content laws are bad for everyone, Jennings said. Dealers, manufacturers, importers and customers all would suffer, he said.

Such laws, he said, "lead to higher prices and reduced product availability."

"Domestic-content requirements are all cost and no benefit," Jennings said.

The odometer proposal backed by NADA would provide incentives for states to create a series of cross-checks in the titling process. These cross-checks would allow the authorities to trace vehicle odometer readings, identify violators and prosecute more easily.

"We need this bill if we are to succeed in improving our credibility in the used-car market," Jennings said.

• In promising support for seat-belt legislation, Jennings said NADA will launch a program for dealers to become actively involved at the local level in the effort to increase seat-belt usage.

Dealers, he said, should have a leadership role in promoting seat-belt use.

Turning to factory-dealer relations, Jennings said the era of "shouting and table-pounding" has passed and there is "a new feeling of mutual respect."

"As the marketplace continues to improve," Jennings said, "we must be certain not to repeat mistakes of the past."

He singled out overdealering as a target and said NADA will continue to press for dealer input in the market planning process.

NADA will "work harder than ever before" at listening, he said. Officers, regional vice presidents and directors have already been asked to attend more state conventions and dealer meetings, he said.

"We are going to make a real effort to strengthen our communications with individual members," he said. Communications, he said, would be this year's watchword at NADA.

In the convention's opening session, Transportation Secretary Elizabeth Dole thanked dealers for their efforts to revive the national economy and to improve highway safety.

Dole, the highest ranking woman in the Reagan administration, said, "We realize your industry is at the heart of our economy.

"We will work with you to enhance safety while remaining sensitive to the burdens of regulation."

Outlining her department's 1985 fiscal request, she said it included an increase to $238 million for NHTSA. At the same time, she said that new regulations requiring high-mounted stoplights (similar to those in use on some cars prior to World War II) are the first car regulations in some time.

"They work and they are cost-effective," she said.

Dole reminded many here of a person who is running for office. She is, indeed, politically aware and skilled at replying to questions in a way that seems to be an answer but really isn't.

In the best political tradition, she brought news of federal money for the local area. Dallas, she said, will receive a transit grant of more than $5 million to "rehabilitate" 104 transit buses. Neighboring Fort Worth, she said, will get a grant for $425,000 to help finance the purchase of three buses to provide service between downtown and the airport.

In the closing session, NADA's new slate was installed along with Jennings. They are: William Symes, first vice president; Robert Burd, secretary, and Anthony Ursomarso, treasurer.

• An interesting survey of dealers was conducted on the convention's opening day by Market Facts, Inc. The survey found that 96 percent of dealers questioned expected profits this year. Some 71 percent said they believed the trend to larger cars will continue.

Of those surveyed, 89 percent had fewer than 100 employes and 81 percent have been in business more than 10 years.

The closing session was addressed by James Kilpatrick, the conservative syndicated newspaper columnist.

Kilpatrick predicted that Republicans will lose the Senate by one or two seats this fall.

The public's perception of the recovery will play a big role in determining who wins elections, he said.

If the perception is that inflation is under control, unemployment is down and auto sales are up, President Reagan will be reelected. If the economy appears to be getting worse, "almost any Democrat" could win, he said.

The convention was capped Tuesday evening by the DEAC Diamond Dinner. The $85-a-ticket affair was entertained by the Tex Beneke orchestra.

State recognition awards were presented during the banquet.

Said William Hancock Jr., DEAC chairman, "Our state DEAC teams are the key to our success. Our purpose is to elect the best people — those with open minds.

"The campaign funds we give are simply an effective calling card which only helps ensure that dealer concerns are heard.

"But you must have money to give. And that's where our state teams do such a super job."

It's the 14th floor for Reuss, Stempel

DALLAS. — The more things change, the more they stay the same.

Robert C. Stempel and Lloyd E. Reuss, key figures in the General Motors reorganization plan, have moved out of the GM building to offices in Detroit's Renaissance Center.

The new offices are on the 14th floor.

Month's total of 661,841 tops 1983 by 52 pct.

January car output is 5-year high

By Joe Wilssens
Staff Writer

Domestic auto makers wrapped up the first month of 1984 with their best total for the period in five years.

U. S. manufacturers produced 661,841 autos, the most for January since 786,839 were assembled in 1979. Last month's total was up 51.99 percent from 435,455 built in the comparable month last year.

January breakdown by company was: General Motors, 60.10 percent; Ford Motor, 19.60 percent; Chrysler Corp., 15.17 percent; American Motors, 2.18 percent; Volkswagen of America, 1.50 percent, and Honda, 1.45 percent.

Last week, auto makers scheduled 160,978 units, down 7.02 percent from 172,272 assembled in the previous week, but 36.40 percent better than the year-ago output of 118,025.

To date this year, 946,490 cars have been completed, leading the year-ago output of 642,927 for the period by 47.22 percent.

Ford's Kansas City facility was idle last week to adjust inventory.

GM scheduled overtime at six assembly plants last week. GM's Detroit plant added extra daily hours while plants at Fairfax (Ga.), Flint, Framingham (Mass.), Janesville (Wis.) and Oklahoma City worked two additional shifts Saturday (Feb. 11).

Chrysler scheduled overtime at four plants last week. The company's Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 plants were scheduled for two daily 9-hour shifts while the Newark facility's schedule also included two 8-hour Saturday shifts. Chrysler's Jefferson point was scheduled for two 8½-hour daily shifts.

Domestic new-car inventory grows, but holds at 63 days

Continued from Page 8

figures by market class were: Subcompact, 65; compact, 69; intermediate, 64; standard, 51, and luxury, 39.

The Feb. 1 domestic inventory was divided this way among the market segments: Subcompact, 19.21 percent; compact, 27.36 percent; intermediate, 34.50 percent; standard, 11.32 percent, and luxury, 7.61 percent.

The Feb. 1 days-supply figures by market class were:

Subcompact — Fiero, 18; Accord, 19; Horizon, 54; Escort, 60; Chevette, 63; Rabbit, 72; Turismo, 79; Laser, 79; Omni, 82; Lynx, 84; Daytona, 92; EXP, 94; Pontiac 1000, 96; Alliance, 97; Encore, 97, and Charger, 101.

Compact — Cavalier, 60; LeBaron, 65; Reliant, 67; Mustang, 67; Tempo, 76; Eagle, 76; Aries, 78; Camaro, 79; Firebird, 85; Dodge 400, 90; Pontiac 2000 Sunbird, 91; Skyhawk, 93; Topaz, 93; Cimarron, 98; Firenza, 99½, and Capri, 104.

Intermediate — Cutlass Ciera, 40; Century, 49; Pontiac 6000, 50; Marquis, 50; Malibu, 50; Cutlass Supreme, 51; Regal, 55; E Class, 55½; Celebrity, 56; LTD, 57; New Yorker E, 79; Bonneville, 84; Thunderbird, 85; Citation, 91; Cougar, 93; Grand Prix, 94; Omega, 96; Skylark, 98; Monte Carlo, 98; Dodge 600, 100; and Phoenix, 116.

Standard — Olds 88, 37; Gran Fury, 49; LeSabre, 52; Diplomat, 57; Grand Marquis, 58; Chevrolet, 63; Crown Victoria, 65, and Parisienne, 86½.

Luxury—Olds 98, 31; Lincoln, 35; Eldorado, 37; Electra, 42; Cadillac, 43; Corvette, 49; Seville, 51; Continental, 51; Toronado, 53; Riviera, 58, and Mark VII, 61.

NADA rolls post gain of 204 in '83

DALLAS. — NADA increased membership by 204 last year, the first annual gain since 1978, outgoing president William Turnbull told the winter meeting of the Automotive Trade Assn. Managers here.

In January alone, he said, 184 dealers joined NADA. Goal for this year, he said, is for NADA to reach 19,000 members.

Leading ATAM in 1984 are William F. Morie, Georgia, president; Richard K. Welte, Buffalo, vice president; B. Wade Isaacs, North Carolina, secretary-treasurer, and Keith W. Howard, North Dakota, immediate past president.

Truck producers have best month since June, 1979

Truck production in the U. S. climbed to 257,386 units for January, double the 128,563 produced in the year-ago month and the best monthly output since 292,897 trucks were assembled in June, 1979.

Truck manufacturers slated production of 60,849 units last week, 103 units above the previous week's 60,746 and 51.60 percent better than the 40,140 assembled in the comparable 1983 week.

Year-to-date, there have been 350,286 trucks produced, up a substantial 70.11 percent from 205,922 produced during the same period last year.

General Motors scheduled one shift of Saturday (Feb. 11) overtime at Detroit and two shifts at Janesville (Wis.) and Pontiac.

Ford Motor scheduled Saturday overtime at its Kansas City plant.

Output climbs to 5-year peak in Canadian plants

Canadian auto and truck producers completed the first month of assembly in 1984 with the highest totals for January since 1979.

Last month, auto makers posted production at 90,437, a gain of 23.30 percent over the 1983 total of 73,345 and the best January total since 99,731 autos were completed in the first month of 1979.

Last week, auto makers slated production of 23,570 units, 17.01 percent better than the prior week's 20,143 and 72.22 percent ahead of 13,686 produced in the year-ago week.

To date this year, the manufacturers have built 122,769 autos, 20.57 percent higher than the 1983 total of 101,825 produced during the same period.

Truck output in Canada climbed to 66,340 units for January, 88.16 percent greater than the 35,257 trucks built in January, 1983, and the best first-month total since 75,002 trucks were built in 1979.

Truck assembly last week was estimated at 16,727, down 252 units from the previous week's 16,979 but 64.21 percent better than 10,186 produced in the year-ago week.

So far this year, truck assembly has reached 92,717, an impressive 82.41 percent improvement from 50,827 units completed in the first six weeks of 1983.

Chrysler Corp. estimated assembly of 2,201 Dodge Caravans and 2071 Plymouth Voyagers at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 20,296. No Mini Ram Vans were scheduled at the plant last week.

Dealers will no longer stock or deliver cars

Porsche casts a pall on franchise system

By Matt DeLorenzo
Los Angeles Reporter

RENO, Nev. — A three-tier distribution network that dramatically alters the traditional role of the franchised dealer was unveiled by Porsche executives here last week in anticipation of the company's Aug. 31 split from Volkswagen of America.

Peter Schutz, president and chief executive officer of Porsche AG, and John A. Cook, president of newly incorporated Porsche Cars North America, announced the changes to more than 290 dealers.

Reno is to become the headquarters city of Porsche's distribution network in the U. S.

In addition to the new U. S. distributing arm, the company will establish 40 Porsche Centers nationally that will take over many of the functions, such as new-car preparation and delivery, traditionally performed by dealers.

The third tier will be Porsche agencies and Cook said every existing Porsche dealer will be offered the opportunity to become one.

"You can obtain orders for cars and be paid a commission for doing it, will all orders channeled through your servicing Porsche Center," Cook told the dealers.

Schutz and Cook discuss changes, Page 54.

"You may do service and wholesale parts business as in the past, or work with your Porsche Center if your organization is confronted by a special service problem."

However, the key difference between current dealerships and the planned agencies, according to Cook, "is that a Porsche agency does not buy cars for resale. And it does not inventory new Porsches."

• Both Schutz and Cook emphasized that the increasingly competitive nature of the high-performance sports-car market dictated the radical departure in distribution, rather than any deficiencies in VW's or the dealers' performance in the past.

Schutz said exhaustive studies of the market, as well as surveys of the dealer body and customers, were undertaken before the distribution plan was drawn up.

"It is our firm belief that Porsche cannot hope to be viable as a manufacturer of high technology, high-performance sports cars that are distributed by a traditional automotive marketing organization that is basically structured to serve a volume market with traditional service and sales activities," Schutz said.

He predicted that both Japanese and American car companies will be offering luxury and high-performance cars through exclusive networks outside the traditional franchise system in the next several years.

"It is increasingly evident today that the competition is fully awake and in full flight to participate in our market," he said.

"It has been clear to Porsche management for some time that we are living in a transition period and that in the not-too-distant future will be faced with extremely tough competition in virtually all our major market segments."

Schutz predicted that "within two to three years, several American and Japanese manufacturers will be fully committed and engaged in this activity."

"It is our firm conviction that the existing marketing concept for Porsche in North America will be 'meat on the table' within a few years," he said.

• Cook said, "The choice is clear. We can sit on our hands, enjoy the next few years in short-term profits, do nothing different and gradually disappear altogether.

"Or we can address the problem and opportunities now . . . go through change, some of which will be awkward, some of it even painful. But by doing it now, together, we'll have a stronger business in the years ahead."

Schutz said the customer is one of the primary considerations in making the changes.

"It must be as much fun to acquire a Porsche as it is to drive one," Schutz said of the company's goal.

By streamlining and taking greater control of the distribution process, Schutz said the company will be able to offer the customer a chance to custom order vehicles, a three-year full-maintenance lease program

Dealer groups assail changes by Porsche

WASHINGTON. — Porsche's announcement last week that it plans to establish factory-owned retail outlets in the U. S. and turn its former dealers into "agents" stirred a furore at both the American International Automobile Dealers Assn. and NADA.

James P. Jennings, NADA president, said, "NADA will take whatever actions (are) necessary to preserve legitimate interests of our Porsche dealers."

Robert McElwaine, president of AIADA, said, "The scheme is a frontal assault on the entire automotive franchise system and must be resisted by all automobile dealers."

He said AIADA is conferring with legal counsel regarding the rights of the more than 300 Porsche dealers and he warned dealers against signing applications for agency status.

Jennings said, "NADA is alarmed about the decision of Porsche AG to form a new distribution company which will abandon the Porsche dealer network as it currently exists.

"The success which Porsche has enjoyed in this country is due in large part to work of its franchised dealers over many years. They have worked hard to assure that consumers are served and that Porsche is well represented.

"To end such an effective working relationship at this time ignores the value of this contribution to the company by its dealers. It abandons a relationship that has effectively served mutual interests of both parties. We are shocked about this decision, since it strikes to the heart of the franchise system."

McElwaine warned dealers

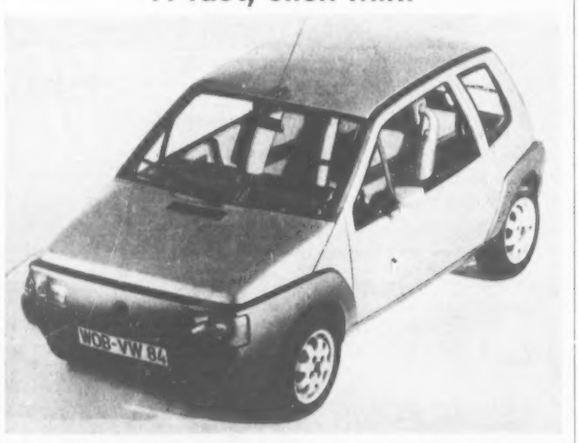
A fast, slick mini



VW unveils the Student

Volkswagen AG gave the motor press a glimpse of some of its advanced vehicle research that had previously been under wraps. Star of the show was this 123-inch-long Student, which is more than 20 inches shorter than VW's smallest production car. Its light weight (1,300 pounds) and superior aerodynamics (0.31 drag co-efficient) allow it to hit 102 MPH with a 49-HP engine while achieving 47 MPG. Story on Page 38.

Nissan dealers to offer service contracts

CARSON, Calif.—Nissan Motor Corp. in U.S.A. has developed an extended service contract program, called Security Plus, for its dealers. Details of the program will be presented to dealers at regional meetings beginning March 5 in Denver and extending to other sites through the month. The program will be administered by Adesco, Inc., Tulsa.

Triumph name to be discarded

COVENTRY, England. — Austin Rover is going to drop the Triumph name later this year. Triumph, one of the most famous car names in the UK, is currently used only on the Honda-based Acclaim model.

Rochester Products plans high-tech facility

TUSCALOOSA, Ala. — Rochester Products Division of General Motors announced a $13.9-million project to develop a highly flexible, world-class manufacturing facility at its plant here. The Flexible Machining and Assembly Project will occupy about half of the Tuscaloosa plant when it becomes operational early in 1986.

Would hamper marketing efforts, McDonald tells dealers

GM blasts bill to ban fleet subsidies

By John A. Russell
New York Staff Writer

NEW YORK. — A letter outlining General Motors' opposition to a bill banning fleet subsidies was sent to all GM dealers last week by GM President F. James McDonald.

This marks the first time any domestic manufacturer has written its dealers on this measure, H.R. 1415.

A copy of the McDonald letter was obtained by Automotive News last week.

In the letter, McDonald termed the bill a "very anti-competitive proposal" which he claimed would "hamper our efforts to provide you and all other GM dealers with innovative marketing programs."

McDonald went on to say that arguments for passage of the measure were not true. He claimed "fleet incentives" do not cause higher dealer or consumer prices.

"Prices to dealers are not increased to cover the cost of these incentives," McDonald said.

He explained that production uniformity made possible by major fleet orders keeps factory costs down.

McDonald said this bill also is contrary to the free-enterprise system. He argued that GM should have the freedom to price its products competitively and provide whatever marketing incentives necessary.

He told dealers that if this measure had been law in 1981, 1982 and 1983, many retail incentives to consumers the corporation funded would have been eliminated or reduced. During this time frame all manufacturers were offering incentives to increase retail sales.

McDonald claimed that "H.R. 1415 requires all incentives paid to customers or dealers for individual sales must also be paid

Smith points to electronics, chemicals

Non-auto business due for bigger GM share

By Marjorie Sorge
Labor Editor

An increasing amount of General Motors' business will be non automotive by the end of the decade, according to GM Chairman Roger B. Smith.

Smith has said GM plans to diversify into non automotive areas such as electronic, chemical and metallurgical products and that much of that change will be completed by 1990. Currently, 5.58 percent of GM's worldwide business is nonautomotive.

The diversification is the second part of what will be the new General Motors by the end of this decade. The first part, announced earlier this year, was the reorganization of the car divisions into the big and small-car "super groups."

GM is taking its time making the transition from five seemingly decentralized car divisions to centralized super groups. The move will be made step by step and at times GM will be running parallel organization systems, Smith said.

GM is prepared for either a slow or fast transition, Smith said.

"Say this goes like greased lightning and we can say, 'boy, this is so good that we ought to take the 1985 W-car or something and move it over right now because look how well this is going,'" he said.

"Or I'd say, 'This isn't going as well as we want it to. Let's keep the '85 W, the '86 X and the '87 Y running on the project center basis where we know they are doing OK until we get this thing turned around.'

"But I have a hunch it is going to happen the first way. The ability to have complete engineering control of a single model and platform in one group of engineers is very important to us. The other factor is that the product is pushing us that way too."

The product Smith refers to is the Saturn project, a new car developed jointly by management and workers from the ground up. According to Smith, Saturn absolutely could not be developed under the old GM system. He said it has to have centralized engineering and production control to achieve its goals.

"The manufacturing engineer and the design engineer have to be sitting at the same drawing board out there to make Saturn work," he said.

Currently, Lloyd E. Reuss and Robert C. Stempel, the vice presidents and group executives who will run the small-car and big-car groups, respectively, are working toward getting the reorganization in place as quickly as possible.

According to Smith, Reuss and Stempel will not take over their total assignments until they come to him and say they're ready. Currently, they are housed at the Renaissance Center in Detroit, rather than at GM headquarters.

Said Smith, "We don't want them running in here and saying, 'boy, I think I'm ready. I got it done in six weeks or six months.' We want them to say, 'Look, we've thought this over very carefully and all bases are

Volvo 740 heading for U. S. this fall

Closing the gap between the new Volvo 760 Series and the old 240 Series is this new Volvo 740-GLE, designated for the U. S. market in the fall of 1984. The new model combines the 760 body suspension with the 240 2.3-liter, four-cylinder injection engine and driveline. It replaces the 240 GLE on the domestic market and in some export markets. Transmission is either 5-speed manual or 4-speed automatic. Production of the new Volvo 740-GLE is somewhat hampered by the limited capacity of the engine plant at Skovde, Sweden, and until August, 1984, only 10,000 units will be produced.

Court blocks DeLorean bid for $800,000

DETROIT.—A U.S. bankruptcy judge last week blocked an attempt by John Z. DeLorean to take about $800,000 out of his Logan Mfg. Co. in Logan, Utah. Judge Ray Reynolds Graves ruled the company could not pay DeLorean rent or "affiliate" payments the former auto maker claimed were due him.

DeLorean acquired Logan in 1979. The creditors' committee of bankrupt DeLorean Motor Co. believed DeLorean may have used company funds to acquire Logan, which manufactures ski-slope grooming equipment and other tracked vehicles.

DeLorean has tried to sell Logan to raise money, but the court has tied up the company's assets and the proceeds of any sale pending the outcome of creditors' committee litigation. DeLorean would need court permission to sell Logan.

DeLorean has tentative plans to sell Logan to a company believed to be headed by longtime associate Roy S. Nesseth in a seller-financed scheme which would involve notes to be due only if and when Logan is profitable. Several attempts to sell Logan last year fell through.

The court also ruled last week that Logan could borrow $3 million from National Acceptance Corp. to pay off outstanding loans.

In another matter, the hearing on DeLorean's "secured" claim that he is entitled to about $700,000 from remaining DMC assets is scheduled to continue tomorrow (Feb. 21).

U. S. cars up 32 pct.; Ford climbs 65 pct.

Early-Feb. sales highest since '79

By Jenny L. King
Staff Writer

Sales of new domestic cars were up nearly 45,000 units in early February compared with Feb. 1-10, 1983, making it the best first period for that month since 1979.

Volkswagen was the only major auto maker to fall behind year-ago sales. Its sales were more than 1,000 units behind Honda, which has been beating VW with more and more regularity.

Feb. 1-10 sales were up 32.74 percent from the previous year, climbing to 181,694 from 136,878. With nine selling days in the period both years, the daily rate likewise was up 32.74 percent, to 20,188 from 15,209.

Ford Motor Co. announced the greatest sales growth, its numbers up 65.45 percent, to 51,166 from 30,925 last year.

Chrysler Corp. was up 35.18 percent, to 22,772 from 16,846. General Motors reported sales of 99,353 new cars in the period, up 18.92 percent from 83,544.

American Motors' estimated sales for the first 10 days of February were up 15.00 percent from the year-ago estimate: To 4,600 from 4,000. Honda announced sales of 2,474 Ohio-built Accords — the company did not report period sales in February, 1983. VW was down 14.97 percent, to 1,329 from 1,563.

• Ford increased its share of the domestic market to 28.16 percent from 22.59 percent in the 1983 period. Chrysler was up to 12.53 percent from 12.31 percent. GM tumbled more than six percentage points, to 54.68 percent from 61.04 percent. AMC had 2.53 percent, down from 2.92 percent; Honda earned 1.36 percent, and VW dropped to 0.74 percent from 1.14 period.

The three Chrysler makes still being produced all reported sales gains in the early February period. Plymouth was up 32.11 percent, Dodge was up 28.57 percent and Chrysler was up 47.83 percent. Imperial sales were zero compared with 49 a year earlier.

At Ford Motor Co., Ford was up 58.10 percent, Mercury was up 85.74 percent and Lincoln was up 60.69 percent.

Buick was up 5.29 percent, Cadillac was up 16.71 percent, Chevrolet was up 1.98 percent, Oldsmobile was up 29.04 percent and Pontiac was up 68.66 percent.

American Motors' AMC line —Eagle—had estimated sales of 700 units, down 30.00 percent from 1,000 Eagles, Spirits and Concords a year ago. Renault sales were gauged at 3,900, up 30.00 percent from 3,000.

Domestic sales Jan. 1 through Feb. 10 totaled 765,123, up 39.17 percent from 549,771 in 1983.

Slumping sales of imported cars stemmed in Japan

TOKYO. — Imports seem to have stemmed their slumping sales in Japan. In 1983, sales totaled 35,286 units, compared with 35,516 in 1982, to record a loss of only 0.65 percent — a great improvement over results of the last couple of years.

Over the past few years, the market has changed significantly. Sales of U. S. cars have fallen off, while European cars have recovered a lot of ground.

Nevertheless, Volkswagen, which is still the biggest-selling import in Japan, saw sales slump by 18 percent to 9,664 in 1983, while sales of U. S. autos fell 25 percent to only 2,646 units. Mercedes-Benz autos accounted for 6,612 sales (up 15 percent), ahead of BMW with 6,298 (up 19 percent).

Audi increased sales by 8.5 percent to 3,568. Volvo, Jaguar, Citroen and Saab also increased sales, albeit from a small base.

Nevertheless, with so many companies making gains, the outlook for 1984 is good, especially since Renault cars are now to be imported on a regular basis and Austin Rover Japan is to increase its model range.

Canadian parts group endorses World Expo

The Automotive Parts Manufacturers Assn. of Canada has endorsed the third annual Automotive News World Expo, which will be held Aug. 28-30 in Detroit's Cobo Hall.

The backing of the 320-member parts group ensures that Canada will be well represented among international automotive parts exhibitors who will be seeking customers for their products at World Expo, according to Patrick Lavelle, president of APMA.

Canadian firms planning to exhibit at the World Expo are eligible for financial assistance under a Canadian government program that encourages companies to seek new business outside the country.

Exhibitors from around the world will display automotive components, materials, machinery and services at the buy-sell trade fair.

With the presence of many of the world's major vehicle manufacturers, who will staff business offices on the show floor, all aspects of the automotive original equipment business will be together under one roof at World Expo.

"We are encouraging all of our association's member companies to participate, either as exhibitors or attendees," said Lavelle.

Other Canadian firms not affiliated with APMA are also encouraged to be involved in World Expo, Lavelle said.

• Products entering the U. S. from Canada and other nations may be brought into Detroit under minimal customs procedures in accordance with Cobo Hall's designation as an international free trade zone during the show.

Tony Merpi, managing director of World Expo, said that increased participation by Canadian manufacturers of OEM and aftermarket products is a major factor in the decision to add 10,000 square feet to this year's exhibition space.

World Expo will run in conjunction with the ninth annual Automotive News World Congress, an automotive seminar to be held Aug. 26-29 at the Westin Hotel, near Cobo Hall in downtown Detroit. Together, the two events make up Automotive News Week.

For World Expo and World Congress information, write to 965 E. Jefferson Ave., Detroit, MI 48207. Telephone number: (313) 567-9520. Cable address: TWX 810-221-5122 AUTNEW.

But market penetration declines a bit

Import registrations post monthly gain

By Jenny L. King
Staff Writer

New imported-car registrations climbed slightly in numbers November, 1983, compared with the same month of 1982, but market penetration continued to drop as the domestic market moved ahead more quickly.

According to statistics gathered by R. L. Polk & Co., import registrations totaled 175,902 during the 11th month, up 1.59 percent from 173,147 the preceding year. Imports accounted for 25.08 percent of the November market, down 0.47 percentage points from 25.55 percent in 1982.

Honda, Volvo and BMC were the only imports to increase their shares of the import market in November. Honda, including Accords built in Marysville, O., was up to 31,901 units, surpassing Nissan to gain second place and going up 2.37 percentage points to 18.14 percent from 15.77 percent of the market.

Top import Toyota slipped 0.45 percentage points, to 21.89 percent from 22.34 percent. Nissan was off 2.97 percentage points, to 18.00 percent from 20.97 percent. Mazda dropped 0.37 percentage points in November, VW was off 0.39 percentage points and Subaru slipped 1.37 percentage points.

Volvo, growing to registrations of 7,028 from 4,724 for the month, was up 1.26 percentage points. Mercedes-Benz dipped 0.25 percentage points and BMW gained 0.21 percentage points. The Dodge Colt/Vista from Mitsubishi claimed 10th place among imports, pushing Audi into the category of "others." Colt/Vista cornered 2.21 percent of the November import market.

The top 10 makes captured 88.44 percent of the import market last November, compared with 90.26 percent a year earlier.

Imported cars claimed 27.68 percent of the U.S. market for the first 11 months of 1983, a decline of 1.76 percentage points from 29.44 percent in 1982.

During that period, Toyota

truck industry news

Good gains reported in all market segments

January sales top 1983 by 44 pct.

Retail sales of new trucks of all types in January in the U. S. were the highest for the month in five years, according to preliminary reports, with significant increases over a year ago in all three market segments.

During the month, franchised dealers and factory outlets retailed 278,966 units, an increase of 44.1 percent over last year's 193,592. In January, 1979, retailers sold 293,800 new trucks.

Light-truck sales in the first month of 1984 totaled 262,605 units, with gains in all three weight classifications. The count was 45.8 percent higher than the year-earlier 180,077.

In January, 117,312 Class I trucks were retailed in the U. S., up 38.1 percent over last year's 84,575. The Class 2 total was 109,337, a gain of 54.1 percent over the year ago 70,982. Sixteen Class 3 units were sold during the month, compared with seven in 1983.

January sales of medium trucks were up 8.7 percent to 3,723 units, compared with 3,424 a year ago.

There were no Class 4 sales this year or last. Class 5 was up from 35 units in 1983 to 263, and the 3,460 Class 6 sales were 2.1 percent higher than last year's 3,389.

Heavy-truck sales were up for the sixth straight month in January, although only one of the two weight classes showed a gain over 1983.

During the month, 12,638 heavies were retailed, an increase of 25.2 percent over the year-ago 10,091. The Class 7 count was off 2.2 percent, from 4,529 units in 1983 to 4,430. But the Class 8 total was up 47.6 percent to 8,208 units, compared with 5,562 last year.

January sales of compact trucks accounted for almost 40 percent of the industry total. The count was 108,046, an increase of 59.1 percent over the year-earlier 67,912.

Sales of the domestic small trucks during the month were 66.3 percent higher than a year ago, from 43,399 units in 1983 to 72,156. The non-captive imports were up 46.4 percent to 35,890 units, compared with 24,513 last year.

The imported compacts' share of January small-truck sales was down 10.8 percentage points from a year ago. This year they accounted for 36.1 percent of the total with 38,991 sales, compared with 46.9 percent a year ago on 31,844 units.

With the addition of the small Chrysler vans and wagons, the downsized Jeep wagons and Nissan/Datsun pickups built in the U. S., the domestic compacts accounted for 63.9 percent of the January count with 69,055 sales. A year ago, they took 53.1 percent with 36,068 units.

• Big Three truck outlets started the new year with impressive increases over last year. During the month, they retailed 217,014 units, a gain of 38.8 percent over the year-earlier 156,347.

Chevrolet said its dealers sold 80,683 vehicles in January, up 23.7 percent over last year's 65,200 units. Ford sales were 24.6 percent higher, from 62,492

Mack's Curcio blasts fleet anti-subsidy bill

By Jack Walsh
Truck Editor

SAN FRANCISCO. — Passage of the fleet anti-subsidy bill (HR 1415) now before Congress will result in higher vehicle prices for everyone, in the opinion of John B. Curcio, president, Mack Trucks, Inc.

In his keynote address at the sixth annual convention of the Truck Renting & Leasing Assn. here, Curcio said the bill is based on "an incredible and false premise" that individual customers pay more for vehicles to offset incentives offered to fleet buyers.

John B. Curcio

He called the bill "anti-competitive" and said a ban on fleet incentives will "inhibit a manufacturer's ability to provide merchandising programs to its own dealers."

NADA and its American Truck Dealers Division are fighting vigorously for passage of the legislation.

Curcio noted that he began and spent the first third of his career as a truck dealer, and added that "throughout the subsequent years I have been heavily involved in sales, marketing and distribution."

• "This entire issue," he said, "can be better served, as it has been in the past, through agreements between manufacturers and their dealers."

Curcio contended that fleet sales programs assist in holding down the price of vehicles to both the dealers and their customers.

He said "volume orders allow the manufacturers to better plan production, add consistency and predictability to our line schedules, permit large-scale parts and components purchases and help us keep our plants operating during periods of reduced demands."

Curcio said many Mack dealers with whom he has discussed the issue "not only recognize these facts, but also recognize that a highly visible and respected fleet or leasing company using our product has a positive effect on their customers and, in

Advisory board for Rockwell gets new leader

TROY, Mich. — The 17-member Dealer Advisory Board for Rockwell International's Heavy Vehicles Components Operations has elected C. L. (Tom) Lane Jr., president, General GMC, Inc., Phoenix, as its new chairman.

Lane succeeds Vic Salvino, president, Texas Kenworth Co., Dallas, who hosted the group's semi-annual meeting in Dallas recently.

The board was formed by Rockwell in 1981 to serve as a sounding board for new ideas, suggestions and opinions relating to Rockwell's performance as a supplier to the trucking industry.

Members completing their two-year board term at the Dallas meeting included: Vernon Porter Jr., Fort Worth Truck

Testing Army tank transmission

A Detroit Diesel Allison X1100 transmission used in the Army's M1 main battle tank is being tested at various inclines and angles to monitor oil pressure and flow under simulated field conditions.

Toyota expands '84 van line

The Toyota Cargo Van, a commercial version of the Toyota Van introduced in the fall of 1983 as a 1984 model, will be available at Toyota dealerships in March. The vehicle is powered by a 90-HP, 2-liter engine which Toyota said requires no major scheduled maintenance for 60,000 miles.

March debut is slated for Toyota Cargo Van

A commercial version of the Toyota Van introduced in the U. S. last fall will be available at Toyota dealerships in March.

The two-seat Cargo Van shares its basic sheet metal and powertrain with the Van, which is marketed and registered as a passenger car. It has 149.8 cubic feet of capacity and a payload capability of 1,660 pounds for models with automatic transmission and 1,680 pounds for those with the five-speed manual.

The rear-floor area of the utility van, which Toyota said "caters to the needs of small businesses," is carpeted and hardboard panels protect the side walls.

"The Cargo Van's 88-inch wheelbase adds to its excellent maneuverability in tight parking situations and its side windows provide for better all-around visibility than the solid-walled vans of the past," a spokesman said.

"The aerodynamically sloped front end minimizes air resistance for fuel efficiency and a quieter ride," he added. "Like the passenger van, it has the lowest drag coefficient of any van sold in the U. S."

• The Cargo Van is powered by a 2-liter, overhead-valve four-cylinder engine which develops 90 HP at 4,400 RPM. It has electronic fuel injection which Toyota said is equipped with a diagnostic system to speed up troubleshooting.

"The engine offers virtually four years operation (60,000 miles) without scheduled major maintenance," the spokesman said.

Other maintenance-saving features, he added, include hydraulic valve lifters, an adjustment-free alternator belt, 60,000-mile platinum-tipped spark plugs, 60,000-mile coolant, air and oil filters that last 30,000 miles, transistorized ignition for simplified tuneups and a low-maintenance battery.

The five-speed manual overdrive transmission is standard on the vehicle, with the four-speed automatic with torque-converter lockup as an option.

The Cargo Van has an EPA estimate of 25 MPG in city operation for the five-speed transmission, and 24 MPG for vehicles with the automatic. The highway estimate for both is 31 MPG.

"A special load-sensing proportioning valve automatically adjusts brake balance front-to-rear for predictable braking under the broad range of normal load conditions," the spokesman said.

• Tilt steering is standard on the Cargo Van as are front vinyl seats and fixed, tinted windows in the rear compartment.

Overall length of the rear-wheel-drive vehicle is 175.4 inches, the overall height is 70.1 inches and the overall width is 65.7 inches. Curb weight of the unit with manual transmission

Ford reports steady gains for 6.9-liter diesel

DEARBORN. — Ford Division has reported that counter to industry trends, its 6.9-liter V-8 diesel engine is gaining popularity among truck and van buyers.

Offered in light trucks and vans with gross vehicle weight ratings of more than 8,500 pounds, the 6.9-liter diesel — which is built by International Harvester — currently accounts for about 35 percent of total engines in Ford F-250 and F-350 pickups. Installations have increased steadily from about 8 percent of total production in November, 1982, its first month on the market, a spokesman said.

In comparison, he added, installation rates for the Chevrolet 6.2-liter diesel have declined since the first quarter of 1982 from 38 percent for the C-20 pickup and 27 percent for the C-30 to a current rate of about 15 percent in both trucks.

Through December of the 1984 model year, the spokesman noted, Ford had produced 21,097 light conventional trucks powered by the 6.9-liter diesel, an installation rate of 12.7 percent, double the 6 percent in the 1983 model year.

The installation rate for 1984 Econoline vans and Club Wagons is 2.8 percent.

Total is 278,966, highest since 1979

January truck sales show gain of 44 pct.

Continued from Page 16

units in the first month of 1983 to 77,877.

Dodge and Chrysler-Plymouth dealers retailed 31,888 trucks during the month, an increase of 164.1 percent over the previous year's 12,076 units. The new small vans and wagons accounted for almost 26 percent of the total.

Sales of GMC trucks in January were up 60.2 percent to a record 26,566 units, compared with 16,579 a year ago. The previous January high of 24,199 sales was established in 1979.

With the downsized Cherokee and Wagoneer accounting for 56 percent of the total, Jeep dealers retailed 10,869 four-wheel-drive vehicles in January, an increase of 23.1 percent over last year's 4,872 units.

January sales of the discontinued Volkswagen compact front-drive pickup totaled only 110 units, a decline of 79.8 percent from the 544 retailed in the first month of 1983.

Toyota dealers retailed a record 16,235 trucks in January, an increase of 68 percent over last year's 9,664. Nissan/Datsun sales totaled 12,989, including 4,864 trucks built in the U. S., a gain of 45.4 percent over the year-earlier 8,934 units.

Mazda reported that its dealers retailed 8,549 vehicles during the month, an increase of 120.9 percent over last year's 3,870.

Isuzu sales in January were up 11.4 percent to 1,691 units, compared with 1,518 in the same month a year ago. Mitsubishi dealers sold 1,290 vehicles during the month, a gain of 144.8 percent over the year-earlier 527 units.

Dupont leaves AMC to join dealership

FORT WORTH. — George E. Dupont is the new general manager of Holiday AMC-Jeep-Renault-Saab here.

Dupont came to the dealership after having been assistant zone manager in Denver for American Motors. Prior to that, he was with AMC's Dallas zone office as a field sales manager.

Behm's 10th with Saab

Mark Behm, center, vice president of Behm Datsun-Saab, Appleton, Wis., was honored by Saab-Scania of America on his 10th anniversary as a Saab dealer. Presenting the award are Howard Smith, right, Saab Central region manager, and Norman DeFusco, district sales manager.

Nissan-Mexico accepts union's cutback proposal

CUERNAVACA, Mexico.— Nissan Mexicana's assembly plant here agreed to accept an alternate union proposal for a work cutback.

Originally, the firm had ordered a one-day-per-week shutdown to avoid the layoff of 1,800 workers. Under the labor-management agreement, only two days a month will be reduced from the normal work schedule.

But workers will still not receive pay for the cutback time.

The schedule is expected to be maintained throughout the year, with management holding the option of reducing the work week by one day, as originally planned, if the automotive industry's situation does not improve.

CONSOLIDATED LEISURE INDUSTRIES

A Coachmen Industries Company

The one to select...for selection:
SPORT, ELITE, CONVERSE II, VAN CAMPER, and our sensational new LIMITED!

With C.L.I., you get a wide range of van conversions with the styling, the standards, and the options that appeal to more consumers. You also get a wide range of prices to accommodate any lifestyle. Plus, C.L.I. gives you the dealer programs that help maximize your profits.

Start with our product. All C.L.I. automotive conversions are designed, engineered, and constructed to last the life of the chassis. So, no matter which models your customers select, they can be sure they're getting lasting value.

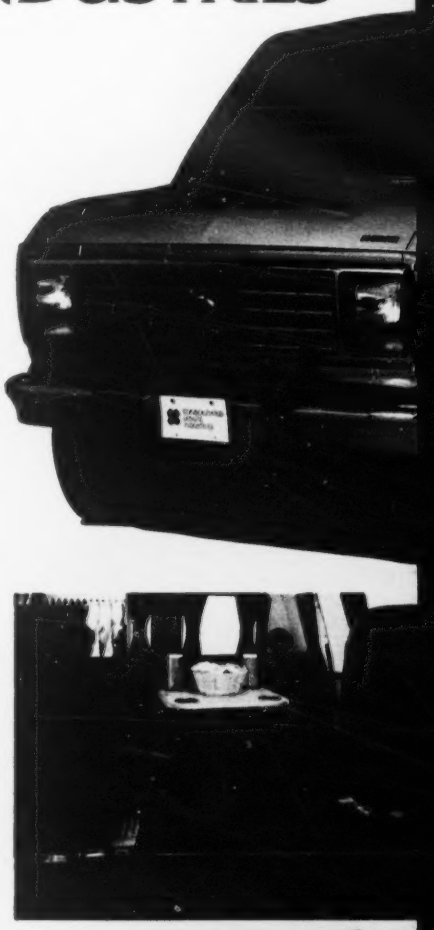
Our new, top-of-the-line Limited is a good case in point. This is the ultimate in automotive conversions; a classic touring vehicle whose performance is as elegant as its looks.

But, then, all of our products have something special to offer. Converse II has a strikingly contemporary design, beautifully realized in a superb driving machine. With the Van Camper, your customers get an array of quality features they'd only expect in a full motorhome. Elite is the ideal family van, with the versatility to go just about anywhere to handle nearly any chore. And our Sport provides comfort, convenience, and tasteful automotive styling at a price that's nice to families on a budget.

Finally, C.L.I. gives you the programs that build maximum dealer profits. We're one of the largest bailment pool van converters in the industry. For dealers who drop-ship chassis to us, we offer an exciting new instant rebate program. We pay quarterly volume purchase and freight rebates directly to the dealer, too. And C.L.I. offers one-year full product warranties with monthly claims payments. There's more. To get full details on why C.L.I. is your best single source for sales and profits, call us or mail the coupon below today.

C.L.I. is the exclusive manufacturer of CHEVY GREENBRIAR, FORD DEARBORN, and GMC JIMMY automotive conversions.

Chevy – Ford – GMC chassis available through bailment pool.



From left to right: SPORT, ELITE, CONVERSE II, and VAN CAMPER, all available on CHEVY, FORD, or GMC Chassis, as is the new LIMITED.

Import registrations post monthly gain

Continued from Page 12

lost 1.28 percentage points, Nissan was up 0.93 percentage points and Honda dropped 0.12 percentage points. Mazda was off 0.01 percentage points, Subaru lost 0.19 percentage points and VW was down 0.86 percentage points.

Seventh-place Volvo was up 0.47 percentage points, Mercedes was up 0.04 percentage points, BMW was up 0.14 percentage points and Audi slipped 0.16 percentage points.

The current 1983-1982 import comparisons exclude Renault Alliance which a year ago was numbered among imports by R. L. Polk & Co. Ohio-built Accords and U. S. Rabbits still fall into Polk's import category.

Ten imports drove off with 88.94 percent of the import market for the 11 months, down from 89.98 percent in 1982.

Japanese-built cars represented 75.45 percent of the November total in 1983, down from 78.01 percent in '82. German cars claimed 10.57 percent in '83, U. S. cars had 6.30 percent and cars from Sweden had 5.16 percent.

November registrations by country of origin were:

	Nov., 1983	Nov., 1982
Japan	132,711	135,077
West Germany	18,588	18,358
United States	11,085	7,150
Sweden	9,085	6,394
France	2,880	4,026
Great Britain	1,071	966
Italy	402	810
Ireland	80	366
TOTAL	175,902	173,147

Registrations for the 11 months by country of origin were:

	11 mos., 1983	11 mos., 1982
Japan	1,705,702	1,608,226
West Germany	229,102	204,888
United States	111,354	88,604
Sweden	105,812	83,794
France	43,700	45,858
Great Britain	13,867	9,077
Italy	8,315	14,169
Ireland	924	3,182
TOTAL	2,218,776	2,057,798

Japanese cars represented 76.88 percent of the 11-month import market in 1983, down from 78.15 percent a year earlier. German cars increased their share to 10.33 percent from 9.96 percent, while the U. S. grew to 5.02 percent from 4.31 percent. Cars from Sweden claimed 4.77 percent of the year-to-date, 1983, market, up from 4.07 percent.

Imported truck registrations fell 8.19 percent in November, to 37,589 from 40,942. Registrations for the major companies, 1983 vs. 1982, follows:

	Nov., 1983	Nov., 1982
Toyota	12,236	12,906
Nissan	8,746	13,099
Mazda	6,473	3,332
Dodge Ram 50	3,052	2,816
Others	7,082	8,789
TOTAL	37,589	40,942

Registrations year-to-date for imported trucks were 12.46 percent above 1982 levels: 443,830 compared with 394,661. The breakout per importer included:

	11 mos., 1983	11 mos., 1982
Toyota	156,110	134,091
Nissan	120,194	92,803
Mazda	62,199	33,885
Dodge Ram 50	29,360	29,340
Others	75,967	104,542
TOTAL	443,830	394,661

Three weeks ahead of last year

1984 car output reaches one million

By Joe Wilssens
Staff Writer

Domestic auto makers marked a 1984 milestone as the one-millionth car was assembled last Tuesday (Feb. 14), nearly three weeks earlier than in 1983. Last year, the million mark was reached March 4.

So far this year, the manufacturers have built 1,127,173 cars, a 46.13 percent gain over 771,331 built during the same period last year.

Breakdown for the year-to-date total by company is: General Motors, 60.07 percent; Ford Motor Co., 19.47 percent; Chrysler Corp., 15.27 percent; American Motors, 2.39 percent; Volkswagen of America, 1.43 percent, and Honda, 1.37 percent.

With 18 facilities working extra hours, last week's estimated production was 177,639 units, 8.30 percent better than the previous week's 164,022. The tally was 36.04 percent ahead of 130,572 produced in the year-ago week.

GM's assembly facilities at Wentzville (Mo.) and Orion (Mich.) did not operate last week and are down again this week due to parts shortages. The plants build the front-wheel-drive C-cars.

Working Saturday (Feb. 18) were GM plants at: Arlington (Tex.), Bowling Green (Ky.), Detroit, Doraville (Ga.), Flint (B-D and G lines), Lansing (B-D and G lines), Linden (N. J.) and Lordstown (O.).

Ford scheduled daily overtime at six plants and extra Saturday (Feb. 18) hours at three assembly facilities. Ford's Atlanta, Wayne (Mich.) and Wixom (Mich.) plants worked both daily and Saturday overtime, while Chicago, Edison (N. J.) and St. Louis were scheduled for daily overtime only.

At Chrysler, Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 put in two daily 9-hour shifts. Jefferson (Detroit) worked two daily 8½-hour shifts.

McDonald dealer letter tells of opposition to H.R. 1415

Continued from Page 1

to fleet customers or dealers selling to fleets."

The GM president said government interference in dictating pricing policies at any level was not in the best interest of the industry.

Reaction to the letter came swiftly last week as Ed Mullane, president of the Ford Dealers Alliance, charged that McDonald was throwing up "a smoke screen" to confuse the dealer body.

Mullane said the letter "contains misrepresentation, intimidation and it in no way addresses the central issue, which is discriminatory or two-tier pricing."

Mullane argued that McDonald was wrong when he said prices are not increased.

"Who then does absorb the $1.4 billion-per-year cost of the current subsidies? The Tooth Fairy?"

According to Mullane, H.R. 1415 is neither anti-competitive nor an attack on the free-enterprise system since it only abolishes the two-tier pricing and treats all segments of the industry fairly.

Mullane charged that McDonald and the manufacturers "are merely attempting to use their father image posture to scare the dealer body into acquiescence."

Mullane said dealers have, over the years, attempted through negotiations with manufacturers, to abolish fleet subsidies. He said that only because the manufacturers would not respond did dealers turn to the government for relief.

• Mullane went on to say that "if the government can be used to restrict imports, what is wrong with the government being used to correct discriminatory pricing?"

Informed sources said the McDonald letter was scheduled to be mailed before the recent NADA convention in Dallas two weeks ago. Pressure was brought on GM by NADA not to send the letter until after the convention to avoid controversy there.

A draft NADA response to this letter also was obtained by Automotive News. In that draft, NADA paragraph by paragraph argued against McDonald and for passage of H.R. 1415.

The draft response argues that the bill only prohibits manufacturers from establishing fleets as a preferred class of customers and prohibits price discrimination between dealers and fleets.

When the final response will be released was unknown at press time.

Canadian output edges upward to 23,075 for week

Canadian auto makers slated production of 23,075 cars last week, 3.27 percent more than the prior week's 22,344 but down 5.63 percent from 24,451 assembled in the year-ago week.

To date this year, the manufacturers have built 144,618 autos, 15.62 percent better than the 1983 total at this point of 125,083.

Truck assembly last week was targeted at 16,935 down 270 units from the previous week's 17,205 but an impressive 66.13 percent ahead of 10,194 trucks assembled in the year-ago week.

So far this year, truck production has climbed to 110,130, an 80.66 percent improvement over the 60,961 units which were assembled in the first seven weeks of 1983.

Chrysler Corp. estimated production of 2,054 Dodge Caravans, 1,926 Plymouth Voyagers and 509 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 25,107.

Truck production slips to 58,623 as Chevy dips

U. S. truck producers targeted production of 58,623 units last week. The total was down 7.34 percent from the prior week's output of 63,267, due to a dip at Chevrolet, but it remained 31.19 percent better than the 44,685 produced in the year-ago week.

Year-to-date, 411,327 trucks have been assembled, leading the year-ago total of 250,270 by 64.35 percent.

Nine truck facilities worked additional hours last week.

All six of Ford Motor Co.'s assembly plants were scheduled for additional daily hours, while Louisville also worked Saturday (Feb. 18).

At General Motors, Lordstown (O.), Pontiac No. 2 and St. Louis worked Saturday.

American Motors announced that it will boost production of Jeep Wagoneer and Cherokee by 1,000 units a month at its Toledo plant beginning this week. The scheduled increase will lift output of these models from 350 to 395 units per day.

85 import dealers added during 1983; 1st gain since 1977

By Kathleen Hamilton
Financial Editor

The number of dealers in the U.S. carrying imported cars rose by 85 last year—a gain of just one percent, to be sure, but the first full-year gain since 1977.

At first glance, even that small improvement would seem good. But it was the strength of domestic dealers taking on import lines that made the import-dealer number swell.

The number of dealers carrying only imports actually declined during the year. And that decline was more than enough to offset gains in the domestic-dealer population in 1983.

When everything was tallied, the latest AUTOMOTIVE NEWS dealer census found eight fewer dealers in the U.S. on Jan. 1, 1984, than one year earlier. The totals were 24,721 vs. 24,729.

Breaking that down, 10,096 dealers carried import lines on Jan. 1, 1984. Of those, 3,880 carried only imports. Another 20,841 were domestic dealers — with or without an import line (AUTOMOTIVE NEWS, Feb. 13).

One year earlier, 10,011 dealers carried imports; 3,930 carried only imports, and 20,799 were domestic dealers.

The overall loss of eight dealerships was the smallest loss recorded since AUTOMOTIVE NEWS began keeping records of import and domestic dealer populations in 1957. The only year in which the total rose was 1964.

Like all numbers used in this census, the loss of eight refers only to the change in the total dealer population; no change would be recorded if one dealer closed and another opened in the same category, for example. This census also counts only car dealers; Isuzu's extensive truck-only network, for example, is not included.

• The import declines came in the categories of import-only duals (down 12 percent to 1,130) and domestic dealers dualed with non-captive imports (down 4 percent to 2,352).

Those declines were offset by gains in the numbers of import exclusives (up 4 percent to 2,750) and Chrysler Corp. dealers handling the Mitsubishi-built captive imports (up 6 percent to 3,864).

Because of dualing, there are, of course, more import franchises than dealerships. The import-franchise total rose 3 percent during 1983, to 13,707.

And the gains were widespread: 17 makes increased their dealer numbers, including Lotus and TVR, which reentered the U.S. market in 1983, and International Automobile Importers, which brought back the Bertone and Pininfarina, two sports cars that previously wore the Fiat badge.

Nine makes lost dealers. The only big loss was in dealers handling DeLoreans through Consolidated International. Because there are only a few DeLoreans left to sell — none of them from the current model year—the estimated 250 DeLorean dealers that began the year weren't included at year-end.

Franchise gainers in 1983:

Justy one-liter auto

Something small from Fuji

Broadening its product range, Fuji Heavy Industries has unveiled the one-liter Justy, which is available in two- or four-door hatchback form and rides on a 90-inch wheelbase. Overall length is 139 inches, width 60.4 inches and height 54.7 inches. Fuji plans to start exports to Europe in late summer, but no shipments to the U.S. are planned. Story on Page 44.

FTC opposes proposal to ban fleet subsidies

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The FTC has recorded its strong opposition to the NADA anti-fleet subsidy bill (H.R. 1415).

Commission Chairman James C. Miller III and Commissioner Michael Pertschuk made their views known in testimony before the House Commerce Subcommittee, chaired by Rep. James C. Florio, New Jersey Democrat.

NADA bolsters support for H.R. 1415. Page 58.

Reasons for FTC opposition are spelled out in a letter sent by Miller to Rep. Peter W. Rodino Jr., New Jersey Democrat, whose Judiciary Committee has jurisdiction over the bill.

The FTC thinks the NADA bill "would restrict the ability of manufacturers to adopt a variety of business practices that are presently lawful and procompetitive."

It would "impose unnecessary rigidity on the distribution of automobiles and would probably injure, not help, competition, consumers and, in the long run, dealers," FTC said.

"To the extent that discrimination in sales, whether in terms of price, service or other dimensions of competition, is causing competitive injury, the Robinson-Patman and the Federal Trade Commission Acts provide adequate means of addressing such problems," the FTC letter said.

Pertschuk added to that letter by noting that a necessary premise to that final statement is that the Robinson-Patman Act will be enforced.

While Pertschuk agrees that H.R. 1415 is not a "desirable substitute for" Robinson-Patman principals, he said that the Reagan Administration "has shown a consistent pattern of criticizing the statute as anti-competitive, professing a commitment to enforce it and refusing to bring any cases" involving it.

He added, the only Robinson-Patman orders issued by the

Sales explode, add 100,000 to make period best in 8 years

By Jenny L. King
Staff Writer

It seemed too good to be true: U.S. new-car sales were up close to 100,000 units above those of a year earlier, notching a 75-percent increase and claiming a total that was best for mid-February in eight years.

Sales have been up every period this year, extending the unbroken string of pluses to nine, running back to last November.

Feb. 11-20 domestic sales in 1983 were among the worst on record and threatened to spoil the weak momentum of the then-young auto-sales recovery. A year ago, only 129,096 retail sales were reported, worst since 1961.

This year's mid-month total of 225,260 surpassed '83 by 74.49 percent and bested similar periods going back to 1976 when 233,701 was the total. Record for the period was set in 1973: 272,784.

Sales were running at a 9.2-million rate based on the mid-month performance.

With eight selling days in the period both this year and last, the daily rate was up 74.49 percent, to 28,158 from 16,137. It was the best rate so far in the new calendar year.

Chrysler Corp. boasted the greatest sales increase for the period among the domestic auto makers. Its sales were up 85.08 percent, to 27,461 from 14,837 a year earlier. General Motors was second best with a gain of

breaking news

Saab ragtop

TROLLHATTEN, Sweden. — Saab will introduce a convertible in the U.S. in the 1986 model year. It will be designed on the new two-door sedan (called the 900 GLI in Sweden) which is scheduled to be introduced in the U.S. in the 1985 model year. The car will have a fuel-injected engine with turbo and intercooler. Convertible parts will be provided by American Sunroof. Saab plans to sell 1,000 to 1,500 a year, or about one or 2 percent of the U.S. convertible market.

Separate franchise network, second marketing unit to be formed

Honda to sell new car line in U.S.

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES. — American Honda will sell a new line of cars through a franchise organization separate from its existing dealer body in 1986 and is setting up a second division internally to market the cars.

Honda's existing dealers were told of the move in a series of meetings held around the country. Honda said all its dealers, as well as others outside the organization, will be given the opportunity to apply for the new dealerships.

The company plans to start the new division in early 1986 and sales are projected at 45,000 vehicles during that calendar year. Approximately 120 new dealers will be named in that timeframe as a starting base for the division.

Honda said the new vehicles sold by this separate franchise group "will appeal to a different group of buyers which Honda has not previously sought. The product will have different styling, sportier features,and reflect a different image and concept from current Honda cars."

The new arrangement will be along the lines of the traditional franchise agreements Honda has with its current dealer body.

American Honda President Tetsuo Chino gave a clue to one of the new division's products when he talked to reporters at NADA's convention in Dallas several weeks ago.

During an informal press conference, Chino said both Honda and British Leyland plan to import a front-wheel-drive execu-

Record earnings for 1983 cap incredible comeback

Chrysler reports $701 million net

By Kathleen Hamilton
Financial Editor

Chrysler Corp. reported record profits of $700.9 million for 1983 even after a paper loss of $224 million caused by devaluing its holdings in Peugeot and a loss of $89 million caused by the strike at its Twinsburg Stamping plant.

Chrysler's year-end net profits of $700.9 million ($5.79 a share), quadrupled the $170.1 million ($1.84 a share) it made in 1982 — and 1982 profits included the sale of Chrysler Defense.

Chrysler's comeback is even more impressive when compared to its last record sales and profits year, 1976. Chrysler netted $422.6 million that year. Last year's profits beat the old record by 66 percent.

Even better, those record profits came in a year when unit sales trailed 1976 by 52 percent and dollar sales were 15 percent lower.

Last year, Chrysler sold 1.49 million vehicles and reported net sales of $13.24 billion. Sales were $10.04 billion in 1982.

In announcing the profits, Chrysler Chairman Lee A. Iacocca was cautious in his prediction on how long the boom may continue for Chrysler.

"The first quarter is starting off strongly," he said. "It's a barn burner. I hope it will continue . . . I think it will continue for at least two quarters, I hope six."

Huge federal deficits — larger than the Reagan Administration is projecting — will send the economy downward if they are not trimmed, he said.

In anticipation of another downturn, Chrysler will expand production from 1.4 million units this year to 1.8 million next year, then remain near that level, Iacocca said.

"We can make a lot of money at 8 million" annual industry-wide sales, he said.

Chrysler needs to keep its breakeven point at about 1.1 million to avoid disaster in cyclical downturns, he said.

Chrysler is considering adding capacity for 100,000 to 150,000 more minivans — "half a plant," in Iacocca's words. Chrysler now has 100,000 back orders for the vans. Trades for Voyager and Caravan are running 95 percent cars, he said.

He ruled out a brand new plant.

Chrysler President Harold Sperlich pegged the cost of minivan capacity expansion at about $250 million. Robot welders will take at least 16 months to obtain, so expansion is out of the question for the rest of this model year, Iacocca said.

"The market is there for maybe a million" minivans a year, Iacocca said. But next model year, General Motors and Ford Motor Co. are due to introduce competitive models.

Chrysler spent about $1.7 billion on product last year, double what it spent in 1981 and 1982. Spending this year and next will be $1.7 billion or $1.8 billion each year, Iacocca said.

He expressed nervousness about spending "peak" sums during years that could be bad ones for the auto industry.

"Yet you have to stay competitive," he said.

Engineering is continuing on the subcompact P-car program — the 1986 model sized between the Mitsubishi-built Colt and Omni/Horizon. Chrysler will have to decide by September whether and how to proceed with the car, and make some decisions soon on the Omni/Horizon replacement, Iacocca said.

Sperlich is due to leave soon with a six-person Chrysler team to negotiate with Mitsubishi in Japan. Mitsubishi's interest seems to have picked up in the last six months, he said.

Vehicles, components and joint ventures are within the realm of possibility, Iacocca said. Production of vehicles or components in Mexico, Korea or elsewhere is receiving more attention at Chrysler because of competition from the General Motors Japanese strategy, he said.

"I don't think it's right for the country, what we're doing, but if you can't lick 'em, join 'em," Iacocca said.

Chrysler paid virtually no taxes on its income last year, thanks to credits racked up during four years of losses.

It still has credits enough to offset earnings of $1.5 billion to $2 billion — just about what outside analysts are predicting Chrysler will make next year, said Robert S. Miller, Chrysler executive vice president - finance.

Sales of $13.24 billion were 32 percent higher than 1982's $10.04 billion (restated to eliminate sales of Chrysler Defense, which was sold early in 1982).

Continued on Page 58, Col. 1

Chrysler offers cash for sales of subcompacts

Chrysler has a new "Shift in Cash" incentive program for salesmen and sales managers.

It began Feb. 21 and runs to May 30. Eligible vehicles are the subcompact '83/'84 Horizon, Turismo / Duster, Omni / GLH and Charger/Shelby equipped with manual transmission.

Salespeople earn a flat $75 per unit for each one they sell, with no qualification, on all models except Shelby Charger which pays $150.

Managers earn $25 for each unit they retail, except Shelby Charger which pays $50.

Joe Wilssens

Happy day for Iacocca

No, Lee Iacocca isn't claiming first place in the industry. But the Chrysler chairman was all smiles as he announced record profits for his company for 1983.

Auto profits for 1983 are record $6 billion

By Kathleen Hamilton
Financial Editor

The Big Four reported record profits in 1983 of $6.15 billion—nineteen times the $322 million the U. S. makers made in 1982 on a sales increase of only 23 percent.

Dollar sales for the year also set a record, at $135.71 billion, compared with $110.03 billion in 1982.

(Both sales figures include sales of the defense subsidiaries of Chrysler Corp. and American Motors. Chrysler sold its subsidiary early in 1982; AMC sold its late in 1983.)

General Motors, Ford Motor Co. and Chrysler Corp. each reported individual profits records last year. Previous records had been set in 1978, 1977 and 1976, respectively. AMC lost money last year.

The old profits record for the industry was set in 1977, when profits reached $5.18 billion. Last year's combined profits were 19 percent higher than the old record, but dollar sales rose 25 percent compared with 1977, when they were $108.21 billion.

The old sales record was set in 1979, when the Big Four total was $125.02 billion and both Ford and GM set records for themselves, as well.

The auto makers' giant profits leap of nearly $6 billion over 1982 is evidence of the high profits made per unit once their production breakeven point is reached.

Peter Zaglio, analyst at Lehman Brothers Kuhn Loeb Research, estimates last year's breakeven point was 8½ million units. Combined, the Big Four wholesaled 14.58 million cars and trucks last year and 11.98 million in 1982.

• In 1977, year of the old profits record, the Big Four sold more than 18 million cars and trucks; last year, they wholesaled 14½ million, or 20 percent fewer.

But before hoisting the banner of victory, industry-watchers should account for the erosion caused by inflation since 1977, warned Earl R. Krecher, of MVMA's Policy Analysis Department.

Figuring in constant (1967) dollars, Kreher said 1983's industry profit would have been only $2.1 billion, compared with $2.9 billion in 1977. In constant dollars, 1965 would have set the real profits record at $3.3 billions, according to the MVMA figures.

European makers expect to miss '84 CAFE mark

WASHINGTON. — Pre-model-year fuel-economy reports for '84 models show that both Swedish auto makers expect to miss the fuel-economy standard of 27 MPG.

Saab thinks its CAFE will be 25.3 MPG. Volvo expects somewhere between 26.4 MPG and 26.5 MPG, but it added that that "sufficiently represents average fuel economy for purposes of the act."

The law does contain administrative waiver authority to as low as 26 MPG, but the occasion and its application are not entirely clear.

Jaguar expects a 1984 19.0 MPG CAFE and added that by midyear it plans to launch a new fuel-efficient 6-cylinder engine. Peugeot anticipates 24.5 MPG for its '84 CAFE — with mostly gasoline versions and some turbodiesels.

Ferrari said it will get 14.1 MPG on sales of some 1,100 cars for both its 308 and its Mondial. Lotus expects 17.6 MPG and expects to sell 318 Esprit Turbo models.

Sales records spur first earnings in 15 periods

AMC posts profit in 4th quarter

By Kathleen Hamilton
Financial Editor

American Motors turned its first profit in 15 quarters, set two sales records, predicted a "significantly" profitable but dividend-less 1984 and leaked a few more hints about its product plans.

AMC's fourth-quarter profit of $7.37 million (6 cents a share) wasn't enough to offset three quarters of losses, however. The No. 4 U. S. auto maker ended the year with a loss of $146.73 million, only 4 percent better than 1982's loss of $153.47 million ($2.85 a share).

And 1983's results benefited from the sale of AM General, which generated a gain of $90 million during the third quarter, and from the sale of its American Center headquarters building in the fourth quarter.

AMC officials declined to specify the exact gain realized from the latter sale, but Chairman Paul Tippett indicated the gain was less than $2 million. That means AMC's fourth-quarter profit was generated from cars and Jeeps.

AMC reported 1983 sales totaled a record $3.27 billion, up 37 percent from 1982's $2.39 billion. But if AM General sales were included for both years, AMC's sales last year would have been $3.56 billion, or 24 percent better than 1982 sales of $2.88 billion.

Meanwhile, its wholesale vehicle sales — including Renault but excluding AM General — rose 34 percent, from 286,520 to 383,462.

Tippett predicted 1984 sales of 450,000 vehicles, based on the launch of another Alliance-based car with new engine options (a 1.7-liter engine is in the works), a small pickup based on the Cherokee/Wagoneer and a stronger year for four-wheel-drive vehicles.

Beijing Jeep production in China should be about 20,000 units this year, rising to two or three times that number eventually, as the product is modernized and brought closer to

GSA to pay $35 million for air-bag Fords

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — Ford Motor Co. and the General Services Adminstration (GSA) have settled on $35 million as the price for a 1985 fleet of 5,000 air-bag-equipped Ford Tempos.

The cars will include a driver-side air bag housed on a non-tilt, stepped, four-spoke steering wheel.

Half of the fleet cars will be equipped with anti-lacerative windshields, coated with an extra sheet of clear plastic bonded to the inner surface.

High-mounted center stop lights will also be fitted on the cars, which are equipped with Ford's standard 5-MPH bumper system. Electronic crash sensors will be used.

The company said the extra safety equipment will add $3,000 to the price of each vehicle, with the air bag running $1,000. Coincidentally, Ford sources said the company is selling the cars at $3,000 under the retail price.

The government Tempos will have automatic transmission and air conditioning. Base models with manual transmission retail at $6,928.

The contract stemmed from a 1983 agreement between former NHTSA administrator Raymond A. Peck Jr. and Gerald P. Carmen, outgoing GSA director. The agreement called for government procurement of 5,000 compact sedans equipped with driver-side air bags.

• Carmen said that "unfortunately" Ford was the only auto maker to bid on the contract and that "if the auto industry really wants to get government off its back, it had better start offering competitive safety equipment at prices which people can afford."

Carmen also said he thought the "air bag is an idea whose time has come" and that the public owed consumer advocate Ralph Nader "a vote of thanks" for prodding NHTSA and GSA into procuring the Ford air-bagged fleet.

Both Carmen and current NHTSA administrator Diane Steed said the government purchased the air-bagged vehicles to test the system on a large group of cars and to "assist the marketplace in making better safety equipment available to the public."

When asked whether NHTSA

Oldsmobile Calais on the move

The body for the first Oldsmobile Calais moves down a pilot assembly line at the division's Lansing plant. The new front-wheel-drive coupe, which had been codenamed GM20, will be introduced this fall.

Porsche situation gets 'top priority' at NADA

By John A. Russell
New York Staff Writer

WASHINGTON.—Terming the action by Porsche in terminating its dealers "the damndest thing I ever heard of," James Jennings, NADA president, said this issue has become the number one priority for the association.

Frank McCarthy, NADA executive vice president, outlined the course of action the association will be taking in the coming weeks.

The first wave of action will be at the state level, he said, since there are laws in many states which would stop the terminations.

NADA is coordinating with state associations to determine whether the actions will be complaints filed before motor vehicle commissions or actions taken in court.

Also, McCarthy said, many states have laws forbidding factory stores and brokers.

The 40 centers being contemplated by Porsche "sound like factory stores," he said, and an effort will be made to stop Porsche on this level as well as the broker level because of the "agency" factor.

NADA will also move on the state legislative level to get laws passed in states which do not

Porsche retailers start war chest to fight new system

Porsche dealers on both coasts were gearing for action last week to fight Porsche Cars North America's plans for a new distribution system in the U. S.

In New Jersey, the 14 Porsche dealers have formed a Porsche Dealers Alliance and have set up a legal defense fund, while in California some 40 Porsche dealers have met and agreed to start a legal war chest to protect their interests.

Informed sources said other meetings are being held by Porsche dealers throughout the country as dealers in various areas study and plan courses of action.

The distribution plan outlined by Porsche two weeks ago would effectively abolish the traditional franchise system for Porsche.

At press time, the Porsche-Audi Dealer Council was meeting and a topic was the new distribution system.

The dealers in New Jersey have the backing of the New Jersey Automobile Dealers Assn. and Charles Walton, president of the association, said flatly that while Porsche dealers throughout the nation are up in arms, "We in New Jersey believe it (the system) is a violation of New Jersey law."

New Jersey has one of the strongest franchise laws in the country and Walton said it forbids termination except for failure to comply with the requirements set up by the francisor.

Walton said the Porsche dealers would not "meekly acquiesce" to the dictates of Porsche.

The dealers have established a Porsche Dealers Alliance and a legal defense fund and the state association will support them in their fight. Now, Walton said, attorneys are studying the Porsche plan and deciding on a response.

But Walton made it plain that the Porsche dealers, and the New Jersey dealers association will fight.

In Southern California, more than 40 dealers met last Monday to discuss their options in face of the Porsche announcement. According to dealers attending the meeting, a legal fund was established with initial pledges over $1 million.

"We're going to get involved in every level of jurisdiction available to us," said a dealer who declined to be identified. He predicted that the legal action will cause problems not only for Porsche, but for Volkswagen of America as well.

"I have a contract with VW-oA to buy Porsches," the dealer said, adding that VW's only response has been to send dealers a letter stating that the company will be unable to obtain the sports cars after Aug. 31.

George Follmer, who recently opened a new $1.5 million Porsche-Audi outlet in Orange County, Calif., said the upshot of the meeting was the dealers agreeing that "we need to stay together."

Referring to his investment, Follmer said, "You make a commitment on the basis of a franchise that's going to pay for it. Now what am I supposed to do?"

Also attending the California meeting were representatives of Porsche outlets in the Midwest and Southwest.

Follmer said it appears that the national suits challenging the move on federal antitrust grounds will be filed in California. He added that the fight would also be carried on in state courts as well under local franchise laws.

"Everybody is alarmed," said Bob Smith, a long-time Hollywood Porsche-Audi dealer. He said he thinks he may be the only dealer not going to court over the matter.

"I'm waiting for the dust to settle, I've been around a long time," he said. "I'm kinda sitting here on the sidelines waiting to see what they're (Porsche) really going to do. I don't think that thing will work. It's pretty hard to sell cars over the phone."

But even Smith said there's a limit on how long he will wait. "In the next 30 days, things better start to happen," he said.

Both sides must win, leaked document says

GM outlines '84 bargaining goals

By Marjorie Sorge
Labor Editor

General Motors' wishbook for 1984 bargaining includes the elimination of annual wage increases (AIF) and cost-of-living-adjustments (COLA) in favor of profit sharing. But it emphasizes that negotiations must be a "win-win" situation for both GM and the UAW.

In a report last October to company personnel directors, entitled "Actions to Influence the Outcome of Bargaining," Alfred S. Warren Jr., GM labor relations vice president, said either both sides win in 1984 or "it won't work." The report became public last week.

Besides outlining GM's preliminary bargaining strategy, Warren also emphasized the need for company union jointness in problem-solving and indicated that the UAW-GM national bargaining teams should conduct joint workshops to provide a common information base before bargaining starts in July.

But the UAW was most concerned with the strategy of eliminating AIF and COLA.

"We intend to go into negotiations this summer as we always have before: United and determined to address the needs of our members, not the deluded desires of General Motors," said UAW President Owen Bieber and UAW Vice President Donald F. Ephlin, head of the GM department.

The union last week labeled GM's collective bargaining strategy "wishful thinking."

"This document supports many of our worst suspicions about the motives and intentions of General Motors where the UAW is concerned," Bieber said.

• Some observers have said that the document, which is both damaging and reflective, will push the two sides closer

New Ice Age feared for GM and UAW

By Marjorie Sorge
Labor Editor

News Analysis

The next Ice Age of industrial relations could be moving in on General Motors and the UAW.

The warming relationship that has been developing over the past years between the two natural adversaries is being chilled by a leaked internal company document outlining GM's bargaining strategy for 1984. The document is moving over the relationship like a glacier, chilling the buds of the future.

Those buds include profit sharing, the Quality of Worklife programs and other joint UAW/GM ventures that were just beginning to bloom. Now, because of a document meant only for the eyes and ears of GM industrial relations people, the highly touted profit-sharing and Quality of Worklife programs are undermined and mutual trust has suffered.

It's on those things that the future relationship of the UAW and GM are built.

The glacier may have been triggered by a very parochial

Salesroom in mall doubles Kelly sales

FORT WAYNE, Ind. — Opening a salesroom on a temporary basis inside a Fort Wayne Mall has paid off for Jim Kelly Buick. Kelly reports that his car sales are averaging 10 a day in the mall, double the average on the outside lot in another part of the city.

Kelly said he is considering leasing a spot inside the mall on a permanent basis. Customers are more inclined to buy in the mall salesroom where conditions are much more comfortable, he said.

New rule designed to protect consumers

FTC limits creditors' recourse acts

WASHINGTON. — The FTC has approved 4-0 a new rule limiting the remedies which auto dealers, finance companies and other lenders and retail installment sellers may use against delinquent or defaulting consumers in consumer credit contracts.

But the rule, which is designed to protect consumers from unfair or deceptive practices by creditors, does not go into effect for another year.

At the end of 1981, consumers owed about $90 billion on the kinds of contracts covered under the new rule, according to the FTC.

Among the practices prohibited by the FTC rule are:

1. Confessions of judgment, under which consumers forfeit their right to be notified of a court hearing on their debts and the opportunity to present their side of the case.

2. Waivers of exemption, under which consumers give up their state law rights to keep certain essential items, such as clothing or cooking utensils, in the event of property seizure.

3. Wage assignments, which permit creditors to garnish a consumer's wages without going to court or honoring federal laws limiting such actions.

Under the rule, creditors must also warn cosigners that they are responsible for the debts if the debtors default and must not assess more than one late charge if the debtor has missed only one payment.

Not all of these actions are prohibited under all circumstances, however. Creditors may garnish wages if the consumer authorizes the arrangement and is allowed to cancel it and creditors may repossess household goods if the consumer borrowed money to buy them and used them as collateral for the loan.

The FTC rule does not cover most banks or savings and loan institutions, the regulation of which is the responsibility of other government agencies.

Individual states may also apply for exemption from the rule if they have consumer protection laws substantially equivalent to any of the FTC rule's provisions.

Bankrupt firm can cancel union pacts, high court says

WASHINGTON.—A company can throw out its union contracts immediately after filing for Chapter 11 bankruptcy reorganization, according to a Supreme Court decision last week.

The court ruled 5-4 that a financially strapped company can get a bankruptcy judge to reject a labor contract as long as the company can prove that bargaining would not produce a satisfactory solution.

The test case was the National Labor Relations Board vs. Bildisco & Bildisco, a New Jersey building supply firm.

UAW President Owen Bieber said the decision "will discourage efforts by unions to aid employers threatened by bankruptcy.

"In many cases, it won't make much sense for the union to grant adjustments to an ailing employer on Monday, merely to have that revised agreement torn up on Tuesday on the grounds that contract costs are 'burdensome,'" he said.

Bieber also said the UAW "believes it is a subversion of the bankruptcy laws to allow employers seeking financial reorganization to get out of union contracts, especially when collective bargaining contracts are encouraged and protected under federal law."

The union intends to lobby in Congress to have the law amended. Rep. Peter W. Rodino Jr., New Jersey Democrat and head of the House Judiciary Committee, has said he will introduce a bill that would negate the Supreme Court decision. Paul Simon, Illinois Democrat, will also sponsor a similar bill.

In another matter, the UAW has announced it will appeal a decision by the NLRB which permits companies to move work from a unionized shop to a non-unionized shop unless contractually prohibited from doing so. This can be done when negotiations have been exhausted.

The ruling dismissed a case against Milwaukee Spring Division of Illinois Coil Spring Co. for moving about 100 unionized jobs to a non-union plant in McHenry, Ill. The UAW represented the Milwaukee plant. The company sought concessions from the union before it moved the jobs.

Honda to add second line of cars for U.S. market

Continued from Page 1

tive class sedan during the 1986 model year into the U.S.

The car, which is being jointly developed by BL and Honda, will be built in each company's respective home country, with BL selling its models through its own network, and Honda selling Japanese-produced versions apparently through this new division being formed. BL has codenamed the car XX, while Honda calls its version the HX.

Chino stressed that although the cars share the same design, "they will be quite different." He said each company will use its own powertrains. Chino said his company's car will be powered by a V-6.

Other cars will most likely be sold alongside the HX in the new dealer organization, such as a two-seat mid-engine sports car that is under development and other models not sold by Honda in this market. The new division appears to be considerably upmarket from the traditional car lines offered by the existing organization.

While this new division marks a change in Honda's corporate structure in the U.S., Chino said at the Dallas press conference that the company has no plans to reorganize the company along strict car and motorcycle lines.

Motorcycles are the foundation of the company and much of what Honda does in the U.S. car market evolves from motorcycles activities, he said.

American Honda also plans a new headquarters building in Torrance, Calif., having acquired 80 acres in the Los Angeles suburb for $30 million. Facilities for Honda Research & Development, the company's design studio and a parts warehouse will be built first, with the general headquarters moving over from Gardena later.

GM plant wipes out unemployment office

ST. LOUIS.—The new General Motors plant in Wentzville has put a Missouri unemployment office out of busines.

Because of the resurgence in the automotive industry, nearly 3,000 persons are working at the plant. However, there was nothing for staffers to do at the state Employment Security office and it is closing.

GM to recall 77,000 vehicles to fix seat locks

DETROIT. — General Motors is recalling about 77,000 1984-model two-door passenger cars and light trucks equipped with certain bucket seats to inspect for seat-back inertia locks which may not meet federal safety requirements.

An estimated 10 percent of the seat-back locks on these vehicles may need to be replaced, GM said.

In the event of a vehicle collision, the inertia locks on these vehicles may not function, allowing the seat back to fold forward. This could result in an injury to an unbelted seat occupant. GM said it is not aware of any accidents or injuries resulting from this condition.

Some vehicles with bucket seats from all domestic GM car and truck divisions are included in the recall. Owners are being notified and parts will be available at GM dealerships March 1.

Swig's salesmen to vote on decertification

SAN FRANCISCO.—New-car salesmen for the six dealerships in the San Francisco Autocenter headed by Martin Swig have filed a petition with the National Labor Relations Board (NLRB) to supervise an election proposed to decertify Teamsters Union Local 960 as their bargaining agent.

The decertification, if it occurs, would be another defeat for the local. After a month-long strike, its members returned to their jobs pretty much on management's terms.

The NLRB also has been asked to establish whether contracts agreed to by salesmen at three other dealerships here are valid.

Local 960 members voted to accept a contract offered by European Motors (Mercedes-Benz), California Porsche-Audi and San Francisco Lincoln-Mercury.

Contempo Vans customizes Camaros

Contempo Vans, North Hollywood, Calif., unveiled a customized Camaro at the NADA convention in Dallas. The company will convert drop-shipped Camaros from dealers within 10 days of receipt of the car. The package includes a modified rear deck instead of the factory-installed glass hatch, lower rocker panel extensions and wheel flares, custom paint and 16-inch alloy wheels with high-performance tires.

Mid-month sales explode; total is best in eight years

Continued from Page 1

76.17 percent, climbing to 135,118 from 76,697.

Ford Motor Co. was up 64.78 percent, to 53,383 from 32,396. American Motors reported estimated sales of 5,125 AMC and U.S.-built Renault products, up 34.87 percent from 3,800 a year ago.

Honda nudged Volkswagen from fourth place for the fourth time this year with sales of 2,334. VW reported sales of 1,839, up 34.63 percent from 1,366. Honda had no 10-day report a year earlier although its products were on the U.S. market.

GM earned 59.98 percent of the mid-month market, up from 59.41 percent. Ford slipped to 23.70 percent from 25.09 percent. Chrysler claimed 12.19 percent, up from 11.49 percent. AMC dropped to 2.28 percent from 2.95 percent, and VW was down to 0.82 percent from 1.06 percent, while Honda held the remaining 1.03 percent of the current year's market.

Two GM divisions reported record sales mid-month. Cadillac had its best-ever Feb. 11-20 with sales of 9,669 units. The previous record was 9,569 set in 1979. Oldsmobile splintered its 1976 record of 25,702 sales with the 35,110 its dealers retailed this year. Oldsmobile also surpassed Ford Division sales as it pursued its goal of second place in the sales lineup.

GM's Chevrolet reported doubled sales, up 101.97 percent, to 47,761 from 23,647. Buick was up 16.12 percent, to 20,338 from 17,515, and Pontiac announced a sales explosion of 149.72 percent, to 22,240 from 8,906. Pontiac sales exceeded Buick for the first time in recent history.

At Ford Motor Co., Ford sales were up 65.66 percent, to 34,940 from 21,092; Mercury was up 58.95 percent, to 14,159 from 8,908, and Lincoln was up 78.80 percent, to 4,284 from 2,396.

Plymouth was up 74.61 percent, Dodge was up 79.82 percent and Chrysler was up 106.37 percent in mid-February.

AMC was down 1.32 percent while Renault was up 50.38 percent, VW was up 34.63 percent and Honda had no year-ago benchmark.

Sales so far this calendar year totaled 990,383, up 31.45 percent from 678,867 in 1983.

would settle for the "availability" of air bags, in place of a safety standard mandating their installation, Steed said NHTSA was still reviewing the docket on the passive restraint rulemaking and that no decision had been made.

A Ford spokesman said Ford hoped to make the air-bag option available to other fleet buyers as a result of the government contract and that Ford expected to sell as many as 30,000 air-bagged vehicles in 1985

He said Ford hoped to see demand increase for air bags as an option when more air-bag-equipped fleet vehicles are on the road.

German auto fans like Saab Turbo

ORANGE, Conn.—The readers of Auto Motor und Sport, a West German magazine, have chosen the Saab Turbo as "the best imported car in Germany under 2.5-liters" for the fourth consecutive year, Saab has announced.

In the overall vote for best car, the Saab Turbo took sixth place. Overall winner was the Mercedes-Benz 500-SEL, followed by Porsche 911 Cabriolet, the four-wheel-drive Mercedes G, Ferrari BB 512i and Fiat Uno.

Australian connection

Multi-company production links formed

By Pedr Davis
Staff Correspondent

Mitsubishi Motors Australia has begun assembling 90 Mercedes-Benz bus chassis for Adelaide's new O-Bahn track-guided busway due for completion in 1986. A division of the former Leyland Australia organization has started on the vehicles.

In the first link between the three companies, two South Australian-based firms have been awarded contracts to build 50 articulated and 40 rigid buses. Bodies will be built in Adelaide by coach builder P.M.C., a division of J.R.A., formerly Leyland Australia.

The agreement is the latest in a series of moves which has forged some unusual links. Nissan Australia has renewed its contract to assemble Volvo cars. The former Leyland operation now distributes Peugeot models and the Honda-built Quintet. Ford assembles and markets Mazda-built 323 and 626 models under Ford nameplates. General Motors-Holden's assembles the Isuzu Gemini sedan and markets Isuzu commercial vehicles. Toyota distributes Hino trucks but not Daihatsu, despite the Japanese affiliation between the companies.

The agreement between Mercedes and Mitsubishi is said to be initially worth $18.8 million.

The work involves assembly of the chassis to driveaway condition and includes six-cylinder diesel engine, powertrain, antiskid braking system, suspensions, track-guiding systems and cab. Locally made tires, batteries and fuel tanks are used.

Adelaide's Northeast Busway already incorporates the longest completed section of O-Bahn guided track in the world and involves use of buses guided without driver steering on a concrete trackway at speeds up to 100 KMH. Off the 12 kilometer-long guideway, vehicles will operate as normal buses with full driver control.

The completed Northeast Busway will provide a rapid, scenic connection between the city of Adelaide and its northeast suburbs.

Mercedes plays it cool

To most other auto makers, the results would be outstanding; to Daimler-Benz, the 1983 showing is "satisfactory." The company's consolidated sales rose 1 percent to DM 39.3 billion ($14.2 billion). Auto production was up (458,000 to 475,000), but commercial vehicle output declined as a result of lower export demand; German output was down 7 percent to 173,000 and overseas production down 15 percent to 48,000. Employment remained at around 150,000 and investments stood at $1.1 billion.

Old empire links for BL

Pakistan will produce the old Ital sedan when production in the UK ceases to make way for the new LM11 (Geneva show debut). The $30 million deal initially involves exports from the UK, but within three years will involve local production at a plant 150 miles from Islamabad. BL's second pending deal involves local assembly in India of KD Rover sedans. BL's Austin Rover agreement with Standard Motors of Madras calls for full local production after the joint Project XX between A-R and Honda is launched next year.

Men on the move

Hans Merkle, 71, chief executive of Robert Bosch in Stuttgart, is to be replaced by Dr. Marcus Bierich, from the Allianz insurance group. Jeffrey Wilkinson, joint managing director of the UK's Lucas Industries, has left the company. Tony Gill, the other managing director, will assume responsibilities.

Brian Weedon is the new director of sales and business development at Perkins Engines. He has been director of business ventures with Massey Ferguson in Toronto for the past two years.

Rolls-Royce Motors has created a special post to tackle one of its most pressing problems—recovering lost sales in the domestic market. The job will be handled by Tom Purves, director, UK sales operation. He is a life-long Rolls-Royce employe.

Volvo for Gulf Stream

WEST PALM BEACH, Fla.—Gulf Stream Motors, Inc., has been franchised by Volvo. Ernest A. Bastin is president.

Directors write to dealers

NADA letter answers GM on fleet subsidies

WASHINGTON.—NADA expressed its strong support for the anti-fleet-subsidy bill (H.R. 1415) in a letter to NADA members under signatures of area directors.

The FTC, on the other hand, puts its opposition to the bill on the record when Chairman James C. Miller III and Commissioner Michael Pertschuk testified before the House Commerce Subcommittee.

Miller also spelled out the FTC's view in a letter to Rep. Peter W. Rodino Jr., New Jersey Democrat, whose Judiciary Committee has jurisdiction over the bill.

NADA explained H.R. 1415 to its members as a bill "which would require vehicle manufacturers to pay dealers the same subsidies which are paid to fleet purchasers."

"There is no justification for current practices which allow fleet operators to purchase vehicles for hundreds of dollars less than the price charged to dealers," the letter said. "A fleet operator which registers only 10 vehicles in any combination of brands can generally receive subsidies if only a single unit is purchased from an individual manufacturer."

NADA's letter was in answer to a letter which General Motors President F. James McDonald sent to GM dealers about the bill.

• In its letter, NADA said, "GM and others have claimed that the bill would prohibit them from using innovative marketing programs to stimulate sales of new cars and trucks. This is not true.

"The bill would only require that incentive programs be made available to all customers on an equal basis. Fleets could not be favored, but the manufacturer would be free to use whatever marketing incentives it might deem most effective," the letter said.

"It has been asserted," it continued, "that all retail incentives would have to be paid to fleet operators and that this would be prohibitive in cost. It is true that all incentives would have to be equal, however, fleets today receive a disproportionate share of incentive money."

As for claims that H.R. 1415 would control prices of vehicles, the NADA letter explained that makers would be free to set prices and offer incentives. "They would only be prevented from offering preferential prices to only one class of purchaser."

The letter also answered the charge that fleet subsidies do not result in higher consumer prices, but actually hold factory costs down by saying, "Fleet subsidies, in the aggregate, amount to hundreds of millions of dollars each year and the pricing decisions of the manufacturers clearly reflect these enormously expensive subsidies."

Chrysler profits soar to record of $701 million

Continued from Page 2

If sales of Chrysler Defense were included, Chrysler's 1982 sales would have been $10.06 billion.

Unit sales for 1983 rose 26 percent, from 1.18 million to 1.49 million.

• Chrysler Financial Corp. contributed $47.4 million to Chrysler's profit last year. That was down 9 percent from 1982's reported net earnings of $52.2 million.

But in 1982, Chrysler contributed $32 million to Chrysler Financial. It contributed nothing last year. So the subsidiary's actual net income doubled last year.

After paying off its government-guaranteed loans, paying dividend arrearages to preferred-stock holders, buying back stock warrants and paying off $40 million in loans to Peugeot, Chrysler had $1.07 billion in the bank at year-end.

That was 19 percent more than the $897 million it held at the end of 1982. That cash balance has increased during the first quarter of 1984, Miller said.

Chrysler contributed $52 million to its executive bonus fund for 1,300 executives.

Forty million dollars was contributed to the employe stock plan. At the time of the announcement last Thursday, Iacocca said each Chrysler hourly worker had about $5,325 in retirement benefits from the three-year-old stock plan.

Miller estimated workers would have received $2,000 in profit sharing last year had they not traded the program away in favor of a cash settlement and benefits. For 1983, the package they received in return ended up with a value of about the same amount as that traded away, he said.

From a low of 42,300 hourly workers in January, 1982, Chrysler hourly employment has risen to 70,500, Iacocca said.

Fourth-quarter profits totaled $118.3 million (91 cents a share) — not a record, but a $214 million turnaround from the loss of $96.1 million ($1.30 a share) in the fourth quarter of 1982.

It was Chrysler's first profitable fourth quarter in five years.

Sales for the fourth quarter were $3.78 billion, up 71 percent from $2.21 billion.

The Peugeot write-down took $223.9 million off fourth-quarter net earnings.

IMPORTED-CAR RETAIL OUTLETS

	Jan. 1, 1984		Jan. 1, 1983	
Imported cars only				
Exclusives	2,750		2,643

Domestics with captive imports	3,864		3,637	
Domestics with other imports	2,352		2,444	
		6,216		6,081
Total imported-car dealers		10,096		10,011

Notes: Renault and Volkswagen are counted as domestics
Captive imports are Dodge—Colt, Conquest (Challenger in 1983) and Vista; Plymouth—Colt, Conquest (Sapporo in 1983) and Vista.

Copyright, 1984, Automotive News

But change in mix cuts combined U. S.-foreign count

Import dealer total up 85 for year

Continued from Page 1

Dodge, up 252; Plymouth, up 244; Bertone/Pininfarina, up 141; Lotus, up 25; Nissan, up 18; Mitsubishi and Honda, each up 16; Subaru, up 14; TVR, up 12; Isuzu and BMW, each up 11; Maserati, up 7; Saab, up 6; Mercedes-Benz, up 3; Aston Martin Lagonda and Porsche, each up 2, and Volvo, up 1.

The losers: DeLorean, down 250; Jaguar, down 16; Peugeot, down 14; Toyota, down 12; Alfa Romeo, down 11; Mazda, down 9; Audi, down 8; Rolls-Royce, down 4, and Ferrari, down 2.

Ten makes were at record levels on Jan. 1, each of them breaking or tieing an old record set July 1, 1983.

The 10: Plymouth captives, with 2,831 franchises, up 174 from its previous record; Dodge captives, 2,744, up 167; Honda, 822, up 14; Subaru, 798, up 5; Mercedes-Benz, 416, up 2; BMW, 414, up 7; Porsche, 330, a tie; Isuzu, 217, up 1; Mitsubishi, 83, up 8, and Maserati, 41, up 5.

Honda continued to increase its share of exclusive dealers during the year while decreasing its dualed dealers. Honda exclusives rose by 47 to 444, meaning 54 percent of its network is now exclusive, compared to 49 percent in 1982.

Other makes with large numbers of exclusive dealers were Toyota, 661 exclusives or 61 percent of its total; Nissan, 541 exclusives, 58 percent; Subaru, 302 exclusives, 38 percent; Mazda, 111 exclusives, 15 percent; Volvo and BMW, each 110 exclusives and 27 percent, and Mercedes-Benz, 95 exclusives, 23 percent.

Mitsubishi had 83 exclusives, or all of its dealers. Saab had 62 exclusives, 19 percent of its network.

Eighty-one percent of the single-line import dealerships carried Japanese cars. The Japanese franchise total rose 6 percent during the year, but most of the gain belonged to Chrysler Corp. dealers carrying captive imports. Non-captive Japanese lines were up a modest 1 percent — a smaller percentage increase than that of the franchise total.

Nissan dealers outnumbered Toyota dealers for the first semiannual census since July, 1982.

The number of Italian-car franchises rose 68 percent to 334, thanks to the new Pininfarina / Bertone network. German franchise totals remained relatively unchanged at 1,573. (Volkswagen is counted as a domestic and was included in the Feb. 13 Automotive News dealer census.)

French-car franchises fell 4 percent to 316, but that includes only Peugeot; Renault, too, is counted as a domestic because of its American Motors production link.

British-car franchises plummeted 43 percent to 305 because DeLorean had been included in the UK total.

Agency says it could hurt competition, consumers, dealers

FTC opposes anti-fleet-subsidy bill

Continued from Page 1

FTC since Chairman Miller arrived came from complaints issued before his arrival and that the FTC's senior staff recently recommended closing two "major" Robinson-Patman investigations "despite good indications that violations have occurred."

FTC noted that while the purpose of H.R. 1415 is to protect franchised car dealers from unfair price discrimination, it really goes far beyond the prohibitions of the Robinson-Patman Act.

For example, there need not be any showing of injury to competition and the bill would ban price differences to buyers who are not even competing. Further, there are no defenses such as showing price differences occurred because of cost savings or to meet a competitor's low price.

FTC said that the bill—which seems to require a uniform nationwide price — might even entitle a dealer in Hawaii to sue a Michigan auto maker "for charging a higher price to that dealer than to one located a mile from the factory."

FTC added, "By failing to take into account cost differences or competitive conditions, this section of the bill would restrict the ability of the manufacturers to compete with one another and could lead to distortions in the competitive process without any countervailing benefits."

Moreover, said FTC, the bill — in banning any restriction on a dealer not imposed on any other direct buyer — might affect prices charged to the Federal Government, the American Red Cross, etc. — even though these buyers should not have restrictions such as floor space, servicing provisions or use of trademarks.

Yet another section of the NADA bill, said FTC, would seem to bar auto makers from developing alternatives to the current distribution system although there would seem to be no "valid reason" to prevent makers from selling directly to fleet buyers if that would be more efficient for them.

The NADA bill, FTC continues, goes far beyond the Robinson-Patman Act in banning price discrimination and would mean the factories could not pass along savings in selling or delivery costs to large-volume purchasers.

Even though the bill would seem to allow factories to sell to dealers (or others) for resale to government entities at a lower price, the price would have to be uniform for all similarly equipped models — and this would be the same whether it's one car or hundreds.

Even though NADA has incorporated an exemption in this section, the FTC contended that it is so limited that it suggests if the bill were to become law, it "could well result in substantially increased costs to all levels of government."

obituaries

Garrett R. Ramsey

BIXBY, Okla.—Garrett R. Ramsey, 80, owner of Ramsey Chevrolet Co., died here. He opened the dealership in 1957.

Alfa Romeo added

NORTH MIAMI BEACH, Fla. — Prestige Motorcar Imports, Inc., has added Alfa Romeo to its Peugeot line. Irv David is president of the dealership.

Leaked document threatens future relationship

New Ice Age feared for GM, UAW

Continued from Page 3

self interest directly contrary to the best interests of both the UAW and GM. The document was leaked first to someone in the UAW and then that person leaked it to the media.

Whoever leaked the document, either intentionally or unintentionally, severely damaged the still fragile company-union joint relationship.

The document also wounds Donald F. Ephlin, UAW vice president and director of the union's GM department, who has been one of the progressive union leaders working to further develop the age of reason between the union and the company.

Now, the chill between the UAW and GM is so great that some locals have threatened to pull out of the QWL programs and a planned joint trip to Japan will likely be canceled.

• Those involved in the Saturn project, the new "no-year" subcompact designed and built by both union and management personnel, were to go to Japan together along with some of the members of the GM and UAW bargaining teams.

It was to be an informal getting-to-know-you trip which would hopefully allow both sides to understand the personalities of those sitting across the bargaining table so no 11th-hour slipups would develop because of personality quirks.

Now, it is politically very difficult for that trip to take place — and that is disastrous, not only for the Saturn project but for negotiations. It could easily move the two sides farther away from the age of reason and back into the age of confrontation.

The document, written by Alfred S. Warren Jr., GM labor relations vice president, is the company's wishbook for 1984 bargaining and targets the elimination of annual raises (AIF) and cost-of-living-adjustments (COLA), hoping to replace them with profit sharing.

GM maintains the report was only part of a preliminary strategy meeting for labor relations people and doesn't necessarily reflect the view of the GM Executive Committee. However, those views coincide nicely with those of GM Chairman Roger B. Smith, who believes the company needs to increase its earnings to invest in the future and that every worker should be an entrepreneur, part of GM through profit sharing.

Warren has not been quiet about the elimination of AIF. He told AUTOMOTIVE NEWS in November it was dead, swapped for other things in 1982 bargaining. He said then that although GM is very profitable, it still is non-competitive and he was looking for some way to get the union to understand that.

• Much of the document is geared toward that end, although some of the words are inappropriate in the public domain. The term "influence the UAW leadership" is used and does not sit well with the UAW leaders. At times, the document gives the impression that GM considers Ephlin to be in its hip pocket. But it is only that, an impression.

In reality, Warren was emphasizing the need to continue briefing Ephlin on GM's business and the need for Ephlin to meet often with GM officials to establish a "jointness" between union and company.

Unfortunately, many in the union aren't taking it that way. They see it as a company move to control the UAW by controlling the leadership. That is hurting Ephlin's method of working with the company.

Ephlin believes that both sides should work together, but still remain adversaries during negotiations. He seems to be following the late Walter Reuther's theory of "come let us reason together."

He has developed a good working relationship with the company and has been accused by some in the union of being too close to the company. That has caused him internal political problems. This new development certainly isn't going to help, and it is going to take some doing on his part to put things back together before negotiations start in July.

Although the document is in many ways damaging to the 1984 bargaining, it is also reflective. Warren points out the need for a "win-win" situation for both sides in bargaining this year; otherwise "it won't work."

The problem GM has, he said, is to sidestep the "Restore More in '84" movement gaining steam in the UAW membership. Workers made exchanges in 1982 bargaining that saved GM more than $2 billion in the 30-month contract lifetime.

• However, in 1983 GM made $3.73 billion, stockholders got $2.80 in dividends, joint ventures were announced with Japanese companies and executive bonuses were expected to be at an alltime high. Those things do little to stop the restoration movement, and Warren said that in the document, and he's right.

It will now be more than very difficult to convince workers that "executive bonuses are earned and not some special privilege" as the document suggests. It is going to be even more difficult to make employes understand "that the issue is not how much money GM is making but rather how much money GM needs for business."

Another problem with the document is that the media and the public really don't know what else was said at the meeting. It was a closed meeting for GM labor relations people only; there are no minutes, at least public minutes, so there is no way to know what other discussions were held on the points in the document.

In fact, looking at the paper, it is easy to assume that GM means to lay off between 80,000 and 100,000 workers by 1986 because of a graph attached to the report. However, it is simply an example of what could happen if no other economic cuts were made and all cost reduction was accomplished by reducing the workforce.

It is kind of like the age-old theological question of what happened between the first and second verses of the Bible. Was there an Ice Age then that destroyed the world or not? But that document is all the UAW membership has seen.

At GM and the UAW, there is an Ice Age and it's a shame.

It's a shame that GM's bargaining strategy is now public record and that the company couldn't keep its internal reports secret.

It's a shame that once the UAW had the document, it couldn't keep it quiet, using it to develop its own strategy.

Now, the doors are wide open for a confrontation and Ephlin has said that a strike at GM this year would send the union-company relationship back to the sitdown strike days.

The question now is, can they put it back together before the contract expires on Sept. 14.

25 with Buick

Lloyd S. Kyle, center, Kyle Motors, Inc., Vermilion, O., receives a tray in recognition of his 25th anniversary as a Buick dealer from W. M. Veselick, Cleveland zone manager. Witnessing the presentation is Ruth Kyle, the dealer's wife.

Bommarito's Nissan deal moves to larger facility

ST. LOUIS.—In a couple of years, Tom Bommarito has become one of the largest Nissan dealers in the state and has moved to larger quarters.

He started out as a Datsun dealer in the fall of 1982 and now occupies five acres and 15,000 square-feet of floor space.

NADA giving Porsche system 'top priority'

Continued from Page 3

have strict franchise laws.

On the federal side, NADA is studying possible federal litigation and already has an antitrust attorney studying the issues of this situation. The association is also studying possible federal legislation.

Both McCarthy and Jennings said that the fastest way to stop Porsche from accomplishing this revamping of the distribution system is on the state level with litigation.

Porsche dealers have 60 days to decide whether they want to be agents under the proposed Porsche system. McCarthy said NADA has been advising dealers to "sit tight" for a while to see how the various actions proceed.

McCarthy also said that Porsche AG has filed with the Securities and Exchange Commission in order to raise funds for the 40 centers. Litigation won't help their cause.

He was confident that suits will be filed since "a lot of dealers are meeting with lawyers."

Both sides must win, leaked document says

GM outlines '84 bargaining goals

Continued from Page 3

to a strike when the contract expires Sept. 14.

"It just makes a difficult task harder," said Ephlin.

Besides calling for the elimination of AIF and COLA, which have been included in the contracts since 1948, the Warren report also would:

1. Replace the three-year cycle of formal bargaining at the local level with continuing problem-solving processes or a "living document." Sources said it is GM's intention to develop longer local agreements, avoiding the three-year cyclical shakeup. They said problems build up during the three-year agreements and are never discussed until the next formal bargaining session. Changes would include a more on-going talking process.

2. Establish multi-tiered wages and benefits so they are responsive to competitive pressures.

3. Limit pay for time not worked.

4. Support changes in local work practices and seniority bumping procedures to increase productivity.

5, Implement more new technology to improve productivity, reduce costs, or improve quality.

• In a graph accompanying the report Warren said that hourly employment at GM could drop by about 75,000 to 80,000 by August, 1986, if productivity continues to improve at 2 to 3 percent annually and could drop by more than 100,000 by that time if aggressive productivity increases of 8.5 percent could be reached.

But, sources said, this is only an example of what could happen to GM's hourly workforce if savings in hourly labor cost and cost per car were accomplished by only cutting the workforce. This is not necessarily part of GM's future plans.

6. Discontinue the pilot employment program, negotiated in 1982 which set up these programs at four plants. The program provided for lifetime job guarantees for 80 percent of the workforce at the pilot plants. The program so far has not been initiated.

7. Increase the "jointness" of the Quality of Worklife program. Recently, QWL has come under fire because the programs have not been developed in a joint atmosphere. Some locals have pulled out of the program.

8. Continue and/or strengthen the absenteeism program. Also, negotiated in 1982, the absenteeism program ties heavy absenteeism to losses in benefits.

9. Support the adoption of "pay of knowledge" programs. Under the program, workers are able to increase their wages by learning more jobs. Pilot programs have been established in five plants, with pocket groups in a number of others.

10. Freeze current compensation levels.

11. Begin time-lagged introduction of selected new economic provisions.

12. Reduce hiring rates and extend grow-in provisions for new employes.

Makers assemble 169,823 cars

Car production dips 4 pct. for week

By Joe Wilssens
Staff Writer

U. S. auto makers slated production of 169,823 units last week, a 4.71 percent decrease from the 178,218 autos assembled the previous week, but 27.29 percent greater than the 133,417 produced in the year-ago week.

The production total for 1984 climbed to 1,297,575 units, up 43.55 percent from 903,908 cars completed in the comparable period last year.

Breakdown for the week by company was: General Motors, 56.88 percent; Ford Motor Co., 21.83 percent; Chrysler Corp., 15.75 percent; American Motors, 2.83 percent; Volkswagen of America, 1.38 percent, and Honda, 1.33 percent.

Down last week because of parts shortages were GM's C-car assembly facilities at Wentzville (Mo.), and Orion (Mich.).

Working two shifts Saturday (Feb. 25) were GM plants at: Detroit, Fairfax (Ga.), Janesville (Wis.), Lordstown (O.), Oklahoma City and Lansing. GM's Pontiac plant scheduled one overtime shift Saturday.

Chrysler's Belvidere (Ill.), Newark (Del.) and St. Louis No. 1 plants operated two 9-hour daily shifts last week. Jefferson (Detroit) operated two 8½-hour daily shifts. Belvidere, Newark and St. Louis No. 1 and No. 2 worked two 8-hour overtime shifts Saturday.

This week, Chrysler plans two 9-hour daily shifts at Belvidere, Newark and St. Louis No. 1 and No. 2.

AMC moves into the black with 1st profit in 15 quarters

Continued from Page 2

AMC's Jeep product line, he said. AMC is minority partner in the joint venture.

AMC has not decided whether to build its large car — believed to be a version of the new Renault 25—at the Toledo plant where Jeeps are assembled or at Brampton, Ont., where Jeeps and Eagles are built, said AMC President Jose J. Dedeurwaerder.

AMC will negotiate with the Canadian Government on the issue, he said. A decision will be reached by year-end.

Jeep production is now running at 700 per day. AMC has capacity for 1,000 per day, Dedeurwaerder said.

• For the first time, Tippett announced AMC will not import the R-25. Previously, AMC officials always had held open the possibility of importing a larger car.

In fact, Tippett said in announcing the AMC results that AMC plans to enter both the compact and intermediate markets, so it apparently has more than the R-25 in its long-range plans.

AMC's auto wholesale sales rose 38 percent last year, from 195,791 to 270,019. Jeep sales rose 25 percent, from 90,729 to 113,443.

AMC's loss from continuing operations widened from $232.15 million in 1982 to $258.34 million last year.

But for the fourth quarter, continuing operations (cars and Jeeps) showed a turnaround of $33.23 million — from the 1982 fourth-quarter loss of $25.86 million to $7.37 million in earnings in the most recent quarter.

Net earnings for the quarter (including AM General) improved by $10.24 million, going from a loss of $2.87 million (10 cents a share) to earnings of $7.37 million (6 cents a share).

Sales for the quarter rose 28 percent if AM General sales are included in 1982 figures, going from $856.82 million to a record $1.10 billion. If continuing operations are compared year to year, the quarterly increase was 50 percent, from $729.48 million to $1.10 billion.

Meanwhile, unit sales of cars and Jeeps rose 43 percent, from 83,659 to 119,221 for the quarter.

Tippett credited AMC employes, creditors, the UAW, suppliers, dealers and Renault for what he called "a year of significant achievement and turnaround for American Motors."

AMC plans to recall all its laid-off Kenosha workers "as soon as possible," he said.

And he noted that the average age of AMC's product line is now 2½ years old, compared with an average of 10 years old in 1981.

Volvo names dealer

CHICO, Calif.—Courtesy Motors has been awarded a Volvo franchise. Rodney H. Raphael and Lionel G. Sullivan are partners in Courtesy Motors.

Truck production tops 62,000; off slightly for week

U. S. truck producers targeted production of 62,079 units last week. The total is down 781 units from the previous week's output of 62,860 but was 44.82 percent higher than 42,869 built in the year-ago week.

Year-to-date, 477,643 trucks have been completed, leading the year-ago total of 293,002 by 63.02 percent.

Seven truck facilities worked additional hours last week.

Ford Motor Co.'s Kansas City and Twin Cities (Minn.) facilities scheduled additional Saturday (Feb. 25) hours.

At General Motors, Detroit, Janesville (Wis.), Lordstown (O.) and Pontiac No. 5 added one overtime shift Saturday.

Nissan continued to work daily 9-hour shifts last week.

GM's Pontiac point begins second-shift operations today (Feb. 27). Approximately 350 laid-off employes will return to work and heavy-duty truck output will be increased from 45 to 72 units a day.

Hourly employes at GM's S-truck plant in Moraine City, O., ratified a local agreement that will allow them to work a four-day week. The vote was 926-516.

The agreement will begin March 12 and be in effect for 60 days.

Canadian output of cars steady; trucks are up

Canadian auto makers slated production of 22,691 cars last week, 1.84 percent less than the prior week's 23,118, but 5.80 percent greater than 21,446 assembled in the year-ago week.

To date this year, the manufacturers have assembled 167,352 autos, 14.00 percent ahead of 146,797 completed during the same period in 1983.

Truck assembly last week was targeted at 18,017, up 5.60 percent from the previous week's 17,062 and 76.19 percent better than 10,226 built in the year-ago week.

Year-to-date, 128,274 trucks have been completed, an impressive 80.33 percent improvement over 71,131 built during the same period last year.

Chrysler Corp. estimated production of 2,352 Dodge Caravans, 2,502 Plymouth Voyagers and 618 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 30,509.

Sales per dealer rise in '83; Japan seizes top four spots

By Jenny L. King
Staff Writer

Not only did the new-car sales picture brighten in 1983, but the number of sales per outlet improved substantially for dealers handling both domestics and imports.

Retail deliveries climbed just over 15 percent in the last calendar year as the dealer population stabilized, producing higher averages for those still in the business of selling cars.

As was the case in 1982, there were only four domestic makes among the top 10 when the 1983 sales per outlet by make chart was figured, using AUTOMOTIVE NEWS dealer census figures and annual industry-wide sales totals.

The best four in sales per outlet were Japanese. Toyota had the lead, followed by Honda and Nissan.

Mitsubishi, finishing its first full year on the U. S. market in 1983, took fourth place away from the top domestic make, Oldsmobile, which lapsed into fifth. Buick was sixth, Chevrolet was seventh, Ford eighth, Mazda ninth and Volvo — the only European make in the top 10 — was tenth.

Average sales per outlet including domestics and imports reached 374 last year, up from 323 in 1982. The domestic average was 330, compared with 277 a year earlier, and the imports sales per outlet averaged 235 in '83, compared with 200 in '82.

All five major U. S. auto makers increased sales per outlet 1983 vs. 1982. General Motors expanded to 402 from 338. Ford Motor Co. climbed to 289 from 243. Chrysler Corp. beefed up its corporate average to 226 from 189.

At American Motors, where the final tally included AMC products, Renault Alliance/Encore and Renault imported models, the 1983 total climbed to 125 from 96 a year earlier. Volkswagen, including domestic Rabbits and imported nameplates, was up to 177 from 164.

More tables on Page 60.

• Honda sales per outlet include cars built in Ohio and those imported from Japan. As its 1983 total was about 13 percent Ohio-sourced, Honda is still considered an import in the AUTOMOTIVE NEWS dealer census.

Two domestic and six import sales per outlet records were set in 1983. Oldsmobile, at a new high of 320, erased its 1978 record of 302, and Buick likewise obliterated a 1978 record of 256 with its 1983 average of 288.

Imports with new benchmarks were Nissan, Volvo, Mercedes-Benz, BMW, Saab and Jaguar. Nissan's 479 was better than its 475 in 1980. Volvo, at 220 sales per outlet, improved on the former record of 185 set in 1982. Other 1982 records laid to rest were Mercedes', BMW's, Saab's and Jaguar's.

Shifts in the sales per outlet by make table encompassing all major makes were made by Cadillac, up from spot number 14 to number 12; VW down to 14 from 11; Renault up to 18 from 26; Audi down to 20 from 17; Jaguar up to 24 from 27; Lincoln down to 26 from 22, and AMC down to 30 from 25.

• The domestics-only lineup, 1983 versus 1982, shows Oldsmobile holding on to the top spot among the 13 U. S. makes. Buick remained second, Chevrolet third and Ford fourth.

Cadillac moved up to fifth from seventh, Pontiac stayed sixth and VW dropped to seventh from fifth. Mercury remained in eighth place, Dodge in ninth and Plymouth 10th. Chrysler was 11th both years, Lincoln 12th and AMC 13th.

The Oldsmobile 88/98 and standard Cadillac were the best-selling nameplates per outlet among the domestics in 1983,

Fast Ferrari

Turbo twinned

Ferrari GTO has 400-HP, 2.8-liter V-8 fitted with twin turbos. It is based on the 308-GTB but the engine is north-south rather than east-west. Ferrari will build 200 for homologation, but none will be sold in the U. S. It was unveiled at the Geneva Auto Show. More pictures on Page 2.

Alternative fuel is gaining favor

Methanol a hot issue in Washington

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — Methanol is just about the biggest thing to hit this town since the great oil shocks of the early 1970s, and instead of being bad for the auto industry, it has great potential. Except, of course, it is not good for drinking, inhaling or hand washing.

Last week, the House Fossil and Synthetic Fuels Subcommittee, chaired by Rep. Philip R. Sharp, Indiana Democrat, released its report — the result of a two-year staff study.

Sharp and other sponsors of the Methanol Energy Policy Act of 1984 discussed their proposal which is intended to deal with the chicken/egg problem. That is, the auto makers will not build methanol vehicles until the fuel is available and the fossil fuel industry will not have enough methanol available until there are vehicles available.

Rep. Richard L. Ottinger, New York Democrat and chairman of the House Energy Conservation Subcommittee, plans to sponsor a proposal for a mandatory test fleet of government cars and buses.

The White House recently set up a broad-based Cabinet group to study regulatory barriers to using methanol as an automotive fuel. This has generated action within EPA, NHTSA and the Treasury Department.

Environmentalists are starting to focus on the potential of using high-sulfur coal to produce methanol as a partial solution to the acid rain problem.

• Foreign policy students like methanol's potential for lessening dependence on foreign oil. Conservationists like it because it is fuel efficient and in the short and intermediate term can use surplus natural gas before switching to coal.

The White House has found itself a respectable environmental and energy issue that looks good and will cost nothing whatsoever this year.

This is not to say no problems exist with methanol. The two most prominent ones — the presence of formaldehyde and the hydroscopic nature of the

Drive for technical competence is the theme

SAE show wins applause in Detroit

By Roger Rowand
Engineering Editor

They say you can judge the health of the industry by how well the annual SAE Show looks and fares. Show attendance in Detroit last week pushed at record highs, more cheerful showgoers spoke openly of an improved exposition area and technical sessions attracted healthy audiences.

The overriding motivation behind the big event, of course, is the drive for technical competence and that point was addressed by General Motors President F. James. McDonald as he keynoted the meeting on opening day.

After ticking off a list of areas in which GM clearly shows technical leadership, McDonald said: "It sounds as if we're in the driver's seat, doesn't it?

"The trouble is, we're not alone."

Most advanced automotive technology originated in this country, he said, but technical skills have a way of leveling out, "and that's what's happened," McDonald continued. "Today, skills and tools are pretty evenly distributed throughout the world. No producer has a clear advantage.

"Our challenge is to create such an advantage by leaping ahead of our competitors, and that isn't going to be easy. For too long, it's taken too long to move ideas into the factory and the product. Too often, a breakthrough stays bottled up in the lab or lies dormant inside a computer.

"We've got to break this stranglehold on our own technical future. No special magic is involved, and mostly it's a matter of creating enough discipline to get the job done.

"The lack isn't in R&D," McDonald said. "It's in our ability to swiftly move the results of R&D to the marketplace with

GM chief charts growth

$45 billion aftermarket is predicted by Smith

By Francis J. Gawronski
Service Editor

CHICAGO. — A booming business for the automotive aftermarket, with sales topping $45 billion annually by 1988, was forecast by Roger B. Smith, General Motors chairman.

Speaking at the 25th annual convention of the Automotive Service Industry Assn. here, Smith said the outlook for significantly higher vehicle sales in the years ahead "spells continued growth and opportunity for the automotive aftermarket."

"Aftermarket sales have doubled just in the last 10 years," he said. "Part of that was inflation, of course. But at the end of 1983, the market for automotive service parts — excluding tires and such add-on accessories as mirrors and seat covers — exceeded $40 billion at retail price levels.

"And we expect it will grow — in constant dollars — between 2.5 percent and 3 percent over the next five years," Smith told ASIA members. "That would put the market between $45 and $46.5 billion in constant dollars by 1988."

Smith said the strong auto sales increases of the past few months, which eventually will help the aftermarket, "tell us that the industry's recovery is on track . . . in fact, business is considerably stronger than we anticipated . . . the outlook is extremely good."

"Industrywide new-car and truck sales are definitely up," he said. "In the U. S. last year, they totaled 12.3 million units — a 17 percent increase over 1982.

"And GM is projecting a 14 percent increase for the industry in 1984," Smith said. "That would mean total industry sales of 14 million units — 10.5 million cars and 3.5 million trucks."

In the years ahead, according to Smith, sales prospects are even more promising.

"Sometime in the mid-'90s, North American new-car and truck sales could reach 20 million units for the first time," Smith said. "In the same period, worldwide car and truck sales could reach 60 million. That would be 22 million units better than our best year of 1978, when the worldwide total was just over 38 million units."

Noting that GM's commitment to the automotive aftermarket is "strong and growing stronger" by renewed emphasis on quality parts and service and by help of new technology, Smith said "the prospects for new growth and opportunity for all of us in the automobile business are better than ever before."

"But to achieve that growth and realize that opportunity, each of us needs to examine our own companies and make the changes necessary to maximize operations," Smith told the meeting.

"We need to continue the revolution that's been rocking our industry in the past several years—and has forever changed the way we manage people and technology and the way we make our products," he said.

Smith also said that GM has long recognized the "importance of the aftermarket to our business."

"Long after the sale is over and done with, we vehicle manufacturers still have the responsibility to see that the service needs of our customers are met," he said. "We want those needs met as long as those vehicles are out there and wherever those vehicles might be.

"Having the right part in the right place at the right time is fundamental to providing the kind of service our customers expect and deserve over the life of their vehicles."

Smith said that of the more than 65 million GM vehicles on the road, over 50 million are in the hands of second and third owners.

"The aftermarket's ability to provide quality parts and service to all owners of GM cars — not just to the owners of current models but also to second and third owners — helps us provide customer satisfaction," he said.

• Smith said GM plans to have quality parts available to sell through the independent aftermarket wherever there is a large car population to be served "and our efforts to assure that service parts are properly installed also will continue."

"Over the past 10 years, AC-Delco (division of GM) has offered service training in our 31 GM training centers around the country to over 427,000 mechanics — people from every segment of the aftermarket," he said.

"We've recorded nearly five million student hours in the classroom. And we expect to provide an additional half-million student hours each year for the next five years.

"Training in the future will be even more critical, because of the increasing use of electronics and other new, high-tech service parts that will be designed and engineered into American vehicles," Smith said.

AC-Delco this year, according to Smith, will offer the aftermarket use of a management information system.

"This will be made available to direct customers through state-of-the-art computer terminals, permitting them to access the AC-Delco main computer in Detroit," he said.

"Customers using this system will be able to do such things as place emergency orders; check on parts availability and order status, and obtain pricing, weight, and buy-quantity information.

"So GM's commitment to the aftermarket is strong and growing stronger," Smith told ASIA.

Pace car replicas ready to roll

The first of the 2,000 Fiero Indy pace car replicas to be sold at Pontiac dealerships starting this spring has been assembled. On hand to inspect the first pace car replicas were Joseph R. Cloutier, right, president of the Indianapolis Motor Speedway, and Tony Hulman George, grandson of the late Indianapolis Speedway owner Tony Hulman.

FTC's used-car rule goes another round

WASHINGTON. — In yet another round of the used-car rule, FTC is starting a 20-day rebuttal period on the issue of whether dealers should be required to disclose known defects.

FTC is attempting to discover if that section of the used-car rule should be changed or eliminated.

While both NADA and the National Independent Automobile Dealers Assn. filed voluminous objections, the major consumer groups filed nothing because they believed the FTC had already made up its mind to abandon any requirement for dealers to tell buyers of known defects.

Both dealer associations have told FTC that they already have to do this and their members do so.

Meanwhile, FTC has denied NADA's petition for extra time to file a cost/benefit analysis study of the known defects section. However, the commission said NADA could petition to have the comment period reopened after March 22.

The FTC promulgated the used-car rule in August, 1981, and dealers would have been required to disclose known defects on a window sticker. But before the rule could become effective, Congress vetoed it.

Last July, the U. S. Supreme Court declared that veto unconstitutional.

• Separately, in litigation by NADA and NIADA against FTC, the Second Circuit Court told the commission to reopen the record to allow comment on the known defects provision. That period closed Jan. 31.

The rebuttal period now starts and apparently another comment period can start if NADA asks for a reopening.

Last August, FTC voted to put the used-car rule into effect six months after the appellate court enters a decision. Chairman James C. Miller III has indicated his support for a very simple rule that would require dealers to tell buyers of the existing warranties.

Although NADA has a similar voluntary program of this sort, the association feels the Miller proposal may be too burdensome.

May hearings pledged on local-content bill

WASHINGTON. — Senate hearings on the UAW's domestic-content bill have been promised for mid-May by Senate Commerce Committee Chairman Robert Packwood, Oregon Republican.

Commerce Committee staffers said four hearings are tentatively planned. Field hearings are called for, as well as two hearings to be held here. Locations for the field hearings have not been disclosed.

Packwood's promise was made in response to a letter from seven committee Democrats asking for hearings within 90 days. But Republican opposition could tie the bill up and election year scheduling might keep the measure from reaching a floor vote—if it is ever voted out of committee.

Talk of a possible move by Senate Democrats to add the domestic-content legislation as an amendment to some other bill on the floor of the Senate has been circulating since the House passed its version of the bill last year by a vote of 219 to 199.

However, Packwood's pledge for hearings could ruin the amendment idea, since the Senate traditionally is reluctant to vote on a matter that originates outside of normal committee channels.

Senate Democrats asking Packwood for the hearings are Ernest Hollings, of South Carolina; Russell B. Long, of Louisiana; Wendell H. Ford, of Kentucky; Donald Riegel, of Michigan; J. James Exon, of Nebraska; Howell T. Heflin, of Alabama, and Frank R. Lautenberg, of New Jersey.

The lone Commerce Committee Democrat who did not sign the letter was Daniel K. Inouye, of Hawaii.

Ford to ship engines to Ford Europe

By Richard Feast
European Editor

GENEVA. — Ford Motor Co. is to become a major engine supplier to Ford of Europe within three years. It will be the first West-East trade on such a scale by Ford and represents a further step in world sourcing of components.

The proposal involves shipment of nearly a quarter of a million examples of a new type of four-cylinder gasoline engine each year.

There are no details on which plant will produce the power units, but sources suggest that it will be in the U. S. rather than Mexico.

James A. Capolongo, president of Ford of Europe, confirmed that the engines will have capacities in the 1.8- to 2-liter range, but would reveal no more.

In Europe, Ford will use it in the upper-medium Sierra, a front-engine/rear-drive auto. But engineering trends in the U. S. suggest that for the domestic market, Ford will use the engine in its front-drive cars.

At present, Ford's European power plant in this category is an aging overhead camshaft unit known as OHC. It will continue in production (at Dagenham, England) for use in the transit van and as an industrial unit.

Ford does not see the current high value of the dollar as a block to its export effort. It points out that Ford is all one company anyway and that it uses only dollars for its inter-company accounting.

• Ford also sees the import of North American engines as a balance for the 250,000 V-6s it dispatches each year from Cologne, West Germany, for use in Ranger trucks.

The issue emerged after William Hayden, Ford of Europe vice president for manufacturing, laid out company engine policy to employes of Ford of Britain protesting about closure of the Dagenham Foundry.

Hayden said that importing 100,000 engines for the UK vehicles alone represented an investment saving of some $215 million. The number of engines required by Ford of Germany will take the total import projection to nearly 250,000.

At the same time, he revealed that Cologne is to produce another new generation of engines beginning in 1987. Ford said it plumped for the German site because its productivity is 50 percent better than in the UK.

Industry observers believe the new Cologne engine will replace the current V-6, though whether it will be of the same configuration no one is saying. If so, it seems likely that it will be exported to the U. S. like the V-6.

In Europe, Ford uses the V-6 in Granada, Sierra and (until it disappears at the end of this year) Capri coupe.

Hayden told trade unionists that Dagenham will make all OHC engines in the future, as well as three types of diesel — the Dover truck unit, the recently announced 1600D passenger-car engine and an all-new direct injection engine which will be announced in the spring.

Sales per dealer rise to 374 during 1983

Continued from Page 1

with an average of 111 each. Next was Oldsmobile Cutlass Supreme/sedan at 105, followed by Renault Alliance (95), VW Rabbit (93), Buick Regal (80), Buick LeSabre/Electra (78), Ford Escort (71), Oldsmobile Cutlass Ciera (61) and Plymouth Reliant (59).

A year earlier, the full-size Cadillac had first place all to itself, with a 97-per-outlet average. Second was Rabbit at 94, third was Cutlass Supreme/sedan at 89. Fourth place went to Oldsmobile 88/98 with 86, followed by Buick Regal at 76, Ford Escort at 72, Buick LeSabre/Electra at 58, Plymouth Reliant also with 58, Buick Skylark at 48 and Dodge Aries at 46 sales per outlet.

Reliant was the highest average-per-outlet nameplate for Plymouth dealers in 1983. Dodge's best was Aries and Chrysler's LeBaron topped its nameplates. At Ford it was Escort, at Mercury it was Grand Marquis and the standard Lincoln was best among Lincoln franchises.

• Regal was Buick's best performer, standard Cadillac was tops for Cadillac dealers, Chevrolet's highest-average nameplate was Cavalier, Cutlass Supreme was best for Oldsmobile and the 6000 topped Pontiac's list.

Eagle was best nameplate for AMC dealers and Alliance was best for those with Renault franchises.

Renault Alliance had the highest average per outlet among the 15 U.S. subcompacts in 1983. A year earlier, it was VW Rabbit.

Plymouth Reliant retained top spot in the compacts category with 59 sales per dealer in '83 and 58 in '82.

Likewise, Oldsmobile Cutlass Supreme/sedan was first in intermediates last year and in 1982, Oldsmobile 88/98 had the highest average among the standards both years and Cadillac's Fleetwood/DeVille was tops in the luxury class in 1983 and in 1982.

New glazing for bulletproof windshields OK'd

WASHINGTON. — Auto makers and consumers will be able to use a new type of glazing material to make windshields bulletproof, thanks to a new NHTSA final rule.

In addition, NHTSA has adopted the safety code for glazing materials promulgated in 1980 by the American National Standards Institute. Adoption of this standard will allow the use of the latest technological developments in glazing, the agency said.

NHTSA granted petitions for rulemaking in November, 1980, after General Electric and Rohm and Haas petitioned the agency for the changes.

The new glazing will be used in bullet-resistant shields that will be installed behind the windshield and other windows. The light weight of the material will allow small businesses to provide their employes with ballistic protection at a relatively low cost, the agency said.

Judge denies motion for dismissal of charges

DeLorean jury selection to begin

By Matt DeLorenzo

LOS ANGELES. — U. S. District Judge Robert M. Takasugi last week cleared the way for the DeLorean drug-trafficking trial to begin this week by denying a defense motion to dismiss the charges because of pretrial publicity.

Jury selection in the case is scheduled to begin tomorrow (March 6).

In addition, Takasugi ruled that the audio tape which purportedly shows James Timothy Hoffman, a government informer in the case, threatening John Z. DeLorean, has not been authenticated.

The judge added that no mention of the tape may be made during the trial, unless evidence is introduced showing that the tape recording is genuine.

The barely audible tape surfaced last fall when Hustler magazine publisher Larry Flynt made the recording public along with FBI videotapes showing surveillance and the arrest of DeLorean in the sting operation.

The trial was postponed when a local television station and the CBS network aired the videotapes within days of the November court date.

The court proceedings against the former auto maker will begin with jury selection. Prospective jurors will fill out forms with between 90 and 100 questions to determine the level of their awareness of the case and the publicity surrounding it.

There were also hearings into Los Angeles airport-area hotel Oct. 19, 1982, and charged with conspiracy to possess and distribute 100 kilograms of cocaine.

Two others were netted in the investigation, William Hetrick and Stephen Arrington. Both pleaded guilty and are serving time under plea agreement reached with the prosecution.

Barring unforeseen delays, DeLorean's trial will begin more than 16 months after his arrest. The trial has been delayed by a number of motions and incidents ranging from the bizarre involvement of sex magazine publisher Larry Flynt to legal wranglings over DeLorean's property and assets that spilled over into a federal bankruptcy court in Detroit.

In the first six months after DeLorean's arrest, his attorneys were in court more than half a dozen times arguing over the terms of release for their client.

DeLorean was released on a $250,000 cash bond and a note posting his New Jersey estate, New York co-op and San Diego Country ranch as security for his release.

Later, Howard Weitzman and Donald Re, DeLorean's attorneys, were in court asking that most of the property securing their client's bail be released.

They cited the fact that it had been pledged to Continental Illinois Bank as collateral on a revolving line of credit for the former auto maker's snow grooming equipment company in Logan, Utah.

It was during one of those bail hearings that testimony from a Continental Illinois Bank officer was revealed. That testimony concerned an alleged connection between DeLorean and James Gorman, who was in a Detroit bankruptcy court with a plan to reorganize DeLorean Motor Co.

That period was also marked by a barrage of discovery requests by the defense and court battles between the prosecution and defense over exactly what documents, tapes and records would be admissible.

The defense also sought a hearing into the government's conduct during the investigation. That motion was pending for the better part of a year before Takasugi recently ruled that such a hearing would be conducted after DeLorean's trial.

DeLorean was arrested at a whether or not the court records could be sealed with several news organizations getting involved in the litigation and finally obtaining a ruling from the Ninth Appellate Court opening up most of the documentts in the case.

Last summer, the trial was further delayed by the plea agreements reached with the co-defendants. Both men were sentenced last August.

Then in September, Weitzman revealed that DeLorean had taken a polygraph test administered by Dr. David Raskin at the University of Utah. The defense said the polygraph showed that DeLorean was coerced into the drug deal by the government informant, Hoffman.

There was a lengthy hearing about the admissibility of that test, along with a polygraph administered by FBI Agent Paul Minor (which the prosecution said DeLorean flunked).

Takasugi, who administered polygraph tests himself when he was in the Army, recently threw out the defense test, saying that he was not satisfied with explanations of DeLorean's body movements during the Raskin test.

In ruling against the defense test, Takasugi also precluded the use of the prosecution test.

While the polygraph hearing was underway, Flynt's release of FBI videotapes two days prior to the Nov. 1 trial date caused an indefinite postponement and a series of court appearances by the wheelchair-bound publisher as Takasugi attempted to determine the source of the tapes.

Flynt initially said he obtained them from someone in the FBI and then later declined to identify his source.

After the series of court appearances and a $10,000 fine per day for each day Flynt refused to disclose the source, it was revealed that he purchased the tapes from a James Smith, who worked at Hufstedler, Miller, Carlson & Beardsley, which was one of the law firms representing DeLorean in the early stages of the case. The firm is no longer involved in the proceedings.

U. S. makers assemble 712,778 cars

February output highest since 1979

By Joe Wilssens
Staff Writer

U. S. auto manufactuers slated production of 712,778 units last month, the top sum for February since 738,808 cars were assembled in 1979 and the highest of any month since 783,843 were completed in October, 1979.

Last week, with American Motors down, auto manufacturers estimated completion of 164,276 cars, 2.57 percent below the previous week's production of 168,610 and 29.07 percent above the year-ago output of 116,522 for the week.

The production total for 1984 climbed to 1,460,638 units, up 42.95 percent from 1,021,809 built in the comparable period last year.

Breakdown for the week by company was: General Motors, 61.62 percent; Ford Motor Co., 22.60 percent; Chrysler Corp., 12.91 percent; Honda, 1.44 percent, and Volkswagen of America, 1.43 percent.

AMC's Kenosha (Wis.) facility was down last week, putting 4,800 workers on temporary layoff and 500 on indefinite layoff. The Kenosha plant produces Alliance and Encore models. The plant is expected to return to operation this week.

GM's Orion (Mich.) and Wentzville (Mo.) plants which assemble front-wheel-drive C-cars remained down last week. Orion is expected to resume production today, March 5. Wentzville is scheduled to start later in the week.

Nine of GM's assembly plants scheduled Saturday (March 3) overtime. Working two shifts on overtime were: Arlington (Tex.); Bowling Green (Ky.); Doraville (Ga.); Flint; Framingham (Mass.); Janesville (Wis.); Leeds (Mo.); Lordstown (O.), and Oklahoma City.

Ford's Atlanta and Wixom (Mich.) plants also scheduled Saturday hours.

At Chrysler, Belvidere (Ill.), Newark (Del.) and both St. Louis plants worked two daily 9-hour shifts while Jefferson (Detroit) worked two daily 8½-hour and two Saturday 8-hour shifts.

This wek, Chrysler has scheduled Belvidere, Newark and both St. Louis assembly plants to operate two 9-hour daily shifts. Jefferson Assembly is scheduled to operate two 8½-hour daily shifts.

Caldwell praises the 'genius' of auto engineers, scientists

An upbeat Philip Caldwell gave automotive engineers and scientists a verbal pat on the back last week.

The Ford Motor Co. chairman, speaking at the SAE annual banquet at Detroit's Cobo Hall, said automotive technical people haven't gotten enough credit for the "remarkable technical revolution" that helped modernize and transform the industry.

Caldwell attracted a record banquet turnout of 4,690 people, according to SAE.

The Ford chairman said the industry's "engineers, inventors and creative geniuses" haven't had the full recognition they deserve for their role in "the industrial revolution that has modernized and transformed the most important private enterprise on this continent."

According to Caldwell, cars produced by domestic manufacturers last year were 83 percent more fuel efficient than those of a decade before.

As a result, he said, the U. S. auto industry has done more "to break the stranglehold of the world oil cartel than anything even conceived by politicians and diplomats."

Referring to the industry's efforts to reduce auto exhaust emissions, he told the audience that "the results have been spectacular and the technology you have created is now available for use throughout the world."

Caldwell also got in a plug for the engineers' work on vehicle downsizing and materials innovation, saying they've "done more for the cause of weight reduction than Richard Simmons or Jane Fonda."

Despite these achievements, Caldwell said domestic auto makers still have a lot of work to do to overcome an edge that some competitors around the world still have.

"Until we demonstrate that producing (U.S.) products takes not a single minute more, not an erg of energy more and not a single pound of material more than it takes anywhere else in the world, we still have an unfinished task on our hands," he said.

Canadian makers move up a bit with 24,176 cars

Canadian auto producers slated production of 24,176 cars last week, 859 units more than the prior week's 23,317 and 46.23 percent greater than 16,533 assembled in the year-ago week.

To date this year, the manufacturers have assembled 192,154 autos, 16.44 percent ahead of 165,018 completed during the same period in 1983.

Truck assembly last week was targeted at 17,977 units, down 119 from the previous week's 18,096, but 81.60 percent better than 9,899 built in the year-ago week.

Year-to-date, 146,330 trucks have been completed, a strong 79.30 percent improvement over 81,613 built during the same period last year.

Chrysler Corp. estimated completion of 2,352 Plymouth Voyagers, 2,502 Dodge Caravans and 618 Mini Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 35,921.

Truck production for February is best in five years

U. S. truck production in February was the highest for any month since June, 1979, and the best for February since 1979.

Last month, U. S. truck makers assembled 261,051 trucks, up 51.69 percent from last February's 172,095. In June, 1979, the makers built 292,987 trucks and in February, 1979, they produced 308,358.

Truck production last week was 59,502, down 3.91 percent from the previous week's 61,928, but up 20.88 percent from last year's 49,223.

So far this year, the industry has built 536,994 trucks, up 57.88 percent from last year's 340,132.

General Motors worked Saturday overtime last week on one shift at its Detroit plant and on two shifts in St. Louis.

Nissan worked nine-hour shifts daily last week and also worked Saturday.

At Ford, the Norfolk facility worked Saturday.

GM also announced it will add a second shift for full-size pickups at its Flint plant beginning June 18. About 1,400 workers will be recalled from indefinite layoff.

In addition, GM will begin building its new Astro minivan at the Baltimore plant this summer for a late fall introduction as a 1985 model.

For the year 2000

Volvo LCP: Of sea water and cooking oil

Volvo's vision of the sporty commuter car for the year 2000 is a 1,560-pound two-seater that can carry two extra passengers in rear-facing seats or 1,000 pounds of cargo. Made of plastic, aluminum and magnesium derived from sea water by a Norweigan company, the LCP's most successful engine so far is a three-cylinder diesel that can also burn rapeseed oil and power the car to 112 MPH. More on the engineering project on Page 57.

1.5 million autos in stock; days' supply sliced to 59

By Richard A. Wright
Assistant Managing Editor

The domestic auto makers pushed their stockpile of new cars up over 1.5 million units during February, but sales more than kept pace and the industry entered March with a 59-day supply, down from 63 days a month earlier.

The March 1 inventory totaled 1,537,290 units, compared with 1,477,399 a month earlier. A year ago, the domestic new-car inventory totaled 1,248,384, a 68-day supply.

The overall inventory situation could hardly be a lot better, since the rule of thumb is that a 60-day stock is ideal. But shortages continued in a number of lines and dealers found many of the hot-selling models even harder to get than usual.

The March 1 unit count was the first to exceed 1.5 million since Aug. 1, 1981, when 1,675,193 represented an alarming 87½-day supply.

All corporate makers except Volkswagen of America trimmed their days-supply figures during February, but in terms of unit count, only American Motors, Ford Motor Co. and Honda reduced their stockpiles.

• General Motors opened March with a 58-day supply, down from 60 days a month earlier, despite the addition of more than 50,000 units to its inventory. Fiero was still in very short supply, as was Buick Electra at the other end of the size scale. X-bodies were in heavy supply.

Ford Motor Co. weighed in with a trim 56-day supply March 1, down from 69 days a month earlier. Ford's stock included an emaciated 25-day inventory of Lincolns.

Chrysler Corp. had a 65-day supply March 1, down from 70 days on Feb. 1. AMC opened March with a 70-day supply, down sharply from 94 days a month earlier.

VWoA's stockpile was the heaviest of the corporate makers at 88 days, while Honda's supply of U.S.-built Accords was lowest at 13 days. A month earlier, VWoA had a 72-day stock. Honda a 19-day supply.

The March 1 domestic new-car inventory was divided this way: GM, 56.85 percent; Ford Motor Co., 24.36 percent; Chrysler Corp., 13.54 percent; AMC, 3.38 percent; VWoA, 1.53 percent, and Honda, 0.34 percent.

Table on Page 58

A month earlier, the domestic inventory was divided as follows: GM, 55.57 percent; Ford Motor Co., 25.80 percent; Chrysler Corp., 13.14 percent; AMC, 3.64 percent; VWoA, 1.41 percent, and Honda, 0.44 percent.

By size class, compacts and intermediates — the largest segments—were above the industry average in days supply, while luxury, standard and subcompact groups were below the 59-day level.

On March 1, the industry had the following days supplies by market class: Subcompact, 53; compact, 66½; intermediate, 60; standard, 53½, and luxury, 44.

A month earlier, days-supply figures by market class were: Subcompact, 57; compact, 76; intermediate, 63; standard, 55, and luxury, 38.

The March 1 domestic inventory was divided this way be-

Suits against Porsche could top $1 billion

By John A. Russell
New York Staff Writer

NEW YORK. — Porsche AG has been put on notice that it could face legal action by its U. S. dealers totaling over $1 billion in penalties because of its proposed distribution plan for the U. S.

But the German auto maker's problems over the plan took a more immediate form as Volkswagen of America entered the fray by filing administrative protests with two state motor vehicle boards, protesting the nonrenewal of its distribution contract for the U. S.

Within the past two weeks, Porsche has been attacked on several fronts over the plan, which would effectively abolish the franchise dealer network for the company.

The Volkswagen actions were filed before the California New Motor Vehicle Board and the Nevada Department of Motor Vehicles. Both these agencies regulate the auto franchise system.

On the dealer front, Porsche dealers representing 80 percent of the sales for Porsche in the U. S. formed a Porsche Dealers Action Committee with a $1 million legal warchest to begin the fight to stop the Porsche plan.

The new group told Porsche management in Germany it intends to fight in the courts and it said that under U. S. law Porsche could face penalties of over $1 billion.

• The VWoA action, while filed in two states, is only the beginning, according to a spokesman. Similar actions will be taken with boards in 10 states within the next 30 days and four more states within the next 60 days. The time frames are determined by the individual states for filing these protests. VWoA is

UAW to merge Detroit-area regions

DETROIT.—Delegates to the UAW's Collective Bargaining Convention last week voted to reduce the number of union regions in the Detroit area from six to four as regional directors die or retire. The change is not expected before 1989. The move, a cost-cutting measure, will also reduce the number of regional directors from 18 to 16. The membership in the four regions involved in the merger dropped from 311,298 in 1979 to 188,159 in 1983, thereby slashing dues receipts. UAW membership has dropped 400,000 since 1979.

Emission-control process to be revealed

DETROIT. — Nelco Chemical Co., a supplier to the auto industry, this week will announce the results of its three-year project with General Motors in developing a viable hydrocarbon-emissions-control process that will enable the U. S. auto industry to meet the 1987 Clean Air Standards. The process is said to be cost-effective and to have environmental and productivity/profitability advantages.

UAW still talking merger with other unions

DETROIT. — The UAW is still talking about merger with other unions, including the International Assn. of Machinists and a group in Wisconsin, according to UAW President Owen Bieber. Bieber refused to name the Wisconsin organization, but said he expects to call a press conference within a month to talk about the merger.

Market share cut in half to 2 pct. in '83

Diesel here to stay despite setback

By Richard Johnson
Staff Writer

Barring another shakeup in world oil supplies and a sudden surge in gasoline prices, sales of diesel-equipped passenger cars in the U. S. are expected to limp at their current depressed levels — at least for the short term.

However, both foreign and domestic manufacturers of the diesel say the engine will never disappear entirely from the American automotive scene, and many industry observers and spokesmen still think the diesel may occupy a substantial share of the U. S. market by the end of the decade and beyond.

Gone are the days when auto executives predicted that a quarter of all passenger cars sold in the U. S. in 1990 would be powered by diesels. But advancing diesel technology and expected long-range increases in the cost of fuel could solidify a place for the engine in this country — even without a major shut-off of oil pipelines.

With the stabilization of gasoline prices, diesel car sales have fallen dramatically since 1981. Diesel deliveries tumbled 45 percent last year and accounted for less than 2 percent of overall car sales in 1983, compared with nearly 4 percent in 1982 and just under 6 percent in 1981.

Sales dipped to 173,275 units last year from 313,407 in 1982 and 509,133 in 1983, the domestic industry's peak year for selling diesel cars.

Among import and domestic makes selling diesels in the U. S., only Mercedes-Benz and Volvo reported increases during the 1983 calendar year. Mercedes registered a 4 percent gain in 1983 and zoomed past Oldsmobile into the top spot among marketers of diesel passenger cars in this country.

• Meanwhile, the five General Motors car divisions saw their diesel sales shrink by staggering percentages. Chevrolet was off by 82 percent, Cadillac was

Surprise in NHTSA proposals for '86 and '87

Truck CAFE rules may be eased

By Helen Kahn
Washington Bureau Chief

WASHINGTON. — The long overdue proposed light truck CAFE standards for '86 and '87 models take a unique approach — getting easier rather than harder.

NHTSA is proposing a range for the combined (4x2 plus 4x4) CAFE standard from 20.0 to 21.5 MPG for '86 models and from 20.0 to 22.5 MPG for '87 models. In other words, NHTSA is saying the '86 and '87 combined standards need be no higher than the current ('84 model) combined standard of 20 MPG.

In fact, in the text, NHTSA suggests that a standard even lower than the bottom of the range may occur.

NHTSA also proposes a standards range for '86 models for 4x2 and 4x4 light trucks. These would range from 20.3 to 22.3 MPG for 4x2s and from 18.5 to 19.5 MPG for 4x4s.

For '87 models, the range would be 20.3 to 22.9 MPG for 4x2s and 18.5 to 21.5 MPG for 4x4s.

The relatively large differences between the upper ends of the ranges for the 4x4s compared with the 4x2s and the combined CAFE comes from plans of the truck makers to discontinue some models with low fuel economy and increase the fuel economy of other models.

The agency says it is particularly interested in comments on the "appropriateness" of its adopting standards for '86 and '87 models that "would break the pattern of annual increases" in the light truck fuel economy standards.

But it may also be surprised at comments it gets because there is a possibility that the standards which Congress created to improve fuel economy will start to go backwards instead of forwards—or as NHTSA puts it, "lead to actual reductions in the standards."

• The NHTSA proposal is frankly geared to accommodate Ford and General Motors, since they account for some two-thirds of light-truck sales in the U. S. But actually, Ford is being given the highest consideration since its share is 30 percent and its plight worse.

"Since . . . GM's potential fuel economy capability is not projected to be dramatically higher than Ford's, setting standards at GM's level would achieve little, if any, additional fuel savings," NHTSA says. "Moreover, the potential adverse impacts of placing Ford in a noncompliance situation are great, given that company's recent losses and its debt position."

For example, says NHTSA, if standards were set above Ford's level, the company might restrict product and thereby undercut its economic and competitive position. And other companies would not likely lower their own fuel economy. GM, for example, probably could not since its improvements are "built-in and therefore not readily removable." Thus, the benefits of setting standards "above Ford's level appear relatively small and speculative but the potential adverse impacts of such an action on Ford could be severe."

In fact, NHTSA "tentatively concludes that the standards could not and should not be set at levels above those achieved by Ford."

• The proposed '86-'87 light truck CAFEs, geared toward Ford as they are, hint at least that NHTSA will grant Ford's petitions on light-truck CAFEs for '84 and '85 models.

Last November, Ford petitioned for the combined CAFE for '83 remain the same for '84 models (19 MPG) and the combined CAFE for '84 stay the same for '85 models (20 MPG). Ford also petitioned for change in the 4x2 standards for those years.

In January, Ford amended its petition because it found its projections worsening by 0.5 MPG. Then it asked for a 19.5 MPG combined CAFE for '85s and reduced standards for both 4x2s and 4x4s—to 19.7 MPG and 18.9 MPG, respectively.

Even later, GM supported Ford's petition.

Meanwhile, Chrysler — which boasts of its passenger-car fuel economy—said in its pre-model 1984 report that it expects only 18.5 MPG — 1.5 MPG short of the standard. However, Chrysler says it will use carryback credits (ones it does not yet have), but Chrysler did not petition for a change.

In order to propose standards which may not be any tougher but may actually start to reverse direction—which was certainly not the intent of Congress when it wrote the law in 1975—NHTSA has had to reinterpret what is meant by "maximum feasible," "technological feasibility," and "economic practicability."

These changes in interpretation "together with projections concerning model and option mix shifts" are what lead to the possibility of "little, if any, annual fuel economy improvement."

• NHTSA notes that some technology may cost so much that manufacturers might want to spend money in other ways.

NHTSA also says the range of the proposed standards could raise retail prices as much as $155 per vehicle compared to the '85 baseline, but this should be offset by gasoline savings of as much as $439 per vehicle. The agency also notes that although the profitability outlook for the makers has improved dramatically, it was preceded by a long period of losses for the domestic makers and, therefore, its projections for future capital investment in fuel economy is "cautious."

Besides, NHTSA says, the general outlook is also uncertain and projecting vehicle sales is hard, especially if interest rates rise.

NHTSA also announced it is considering whether standards should be set on the basis of light-truck size — for example, separate ones for the range of 6,001 to 8,500 GVW on the theory these are most likely to be in commercial use, or perhaps no standards at all for these weights.

The agency also warns that after EPA sets NOx standards for light-duty trucks—effective possibly as early as 1987 models —it may reconsider these CAFE standards. So far, EPA thinks fuel economy will stay the same or even be enhanced with three-way catalysts and EEC.

Finally, it should be noted—

Pace car miniature

Bird Automotive, Inc., Omaha, manufactures this 1984 mini Pontiac Fiero Indy Pace Car. The car features a 3-HP engine, will go about 15-18 MPH and holds an adult, the company said. This baby Fiero and other replica mini vehicles made by Bird are used as sales tools for the promotion of the full-size vehicles.

Opel-designed sedan could be exported to U. S.

GM looks to Korea for new small car

DETROIT. — General Motors has announced a tentative agreement with Daewoo Corp. of Korea to jointly produce a small, Opel-designed passenger car near Seoul, Korea, beginning with the 1987 model year.

Up to half of the vehicles manufactured under the venture would be available for export to other countries, including the U. S., GM said last week. The proposed factory would be capable of producing 167,000 cars annually.

GM and Daewoo, a major Korean conglomerate, each own half of Daewoo Motor Co.

A "memorandum of understanding" between the two partners calls for each to contribute $100 million toward construction of the new manufacturing facility. Daewoo would borrow the remainder needed to cover a project cost estimated by GM at more than $400 million.

Further details of the agreement remain under discussion and are subject to approval by the South Korean Government, according to GM.

The joint venture is the first move by an American auto maker to link up with the Korean auto industry for production of cars which may be headed for the U. S. market.

Korean manufacturers are viewed as a low cost alternative to joint agreements with Japanese firms, which are currently restricted by voluntary export limitations.

• GM's plans to begin importing this year a relatively large volume of subcompacts and minisubcompacts from Japan's Suzuki Motor Co. and Isuzu Motors, Ltd., for Chevrolet have been frustrated by export quotas imposed by the Japanese Government.

Isuzu, which is 34 percent owned by GM, has been restricted to about 33,000 cars for GM for the one-year period beginning April 1. Suzuki, which is 5 percent controlled by GM, will be held to 17,000 cars. GM had hoped to bring in as many as 300,000 vehicles a year from its two Japanese partners.

With tight restraints on Japanese imports, U. S. auto makers have reportedly taken a new interest in possible Korean ventures. Meanwhile, Korean automobiles are making their first appearance in North America this year as Hyundai Stellar compacts go on sale in Canada.

Hyundai Motor Co. is expected to enter the U. S. domestic market in the near future, possibly with a new front-wheel-drive model.

Daewoo and GM have plans for construction of assembly, stamping and engine facilities in Bupyong, Korea, which is located about 20 miles southwest of Seoul. The plant will produce front-wheel-drive subcompacts designed by GM's West German subsidiary, Adam Opel A.G.

• A GM spokesman would not comment last week on speculation that the Korean car will eventually be imported by Pontiac to replace the division's subcompact 1000 model, a version of the Chevrolet Chevette. However, Pontiac General Manager William Hoglund has reportedly said the division is considering importing a Korean model.

According to the GM spokesman, the two companies do not have a timetable on completion and approval of a final agreement. However, he predicted that production of the new cars will begin in the fall of 1986.

Johnson, Krebs named to staff of Automotive News

Richard Johnson and Michelle Krebs have been appointed staff writers for Automotive News.

Johnson formerly was news editor of Spinal Column Newsweekly and Business Monthly, two publications in suburban Detroit.

Krebs comes to Automotive News from Financial Diagnostics, a Detroit-area financial planning magazine.

"We are pleased to announce these additions to the Automotive News editorial staff," said Keith E. Crain, publisher and editorial director. "It is one more step in our continuing effort to provide effective coverage of this increasingly complex industry."

Johnson is a graduate of Oakland University; Krebs, of Syracuse University.

Two service contracts readied by Mitsubishi

By Matt DeLorenzo
Los Angeles Reporter

FOUNTAIN VALLEY, Calif. — Two new extended service policies, one for new and the other for used cars, will be offered this spring by Mitsubishi Motor Sales of America.

The new-car service contract, which will be called the Triple Diamond Protection Plan, provides coverage for five years or 50,000 miles.

The used-car coverage, called Mechanical Breakdown Protection Plan, will offer the consumer a choice of months/mileage protection. Both programs will be administered by American Fidelity Insurance Corp.

According to Thomas C. Benson, MMSA service vice president, the new-car contract will provide "bumper-to-bumper" coverage that excludes only a few items, such as tires, paint, batteries and normal maintenance services recommended by the manufacturers.

Triple Diamond Protection covers turbocharged vehicles at no extra cost, towing coverage up to $75 per repair incident and $20 per day rental car allowance.

The protection plan is transferable to the subsequent owner and limits the $25 deductible on repairs up to $100, while repairs over that amount will automatically have the deductible waived.

The used-vehicle protection protection plan is offered in 12-month/12,000 miles or 24 month/24,000-mile contracts with a high-mileage vehicle option.

The two plans will be offered in Western and Plains states April 1, followed by a May 1 launch in the Midwest and East, with the last introduction scheduled for Florida June 1.

More from Geneva

Hotter Fiat

Fiat Argenta VX, given extra surge with a supercharged engine, was displayed at the Geneva Auto Show. The 2-liter Argenta VX has a 101-inch wheelbase and is 175 inches long.

Cabrio from Bertone

Bertone, of Torino, Italy, is marketing this Cabrio for sun lovers. It is aimed at the European market and there are no plans currently to offer it in the U. S.

Citroen for competition

Citroen Visa 1000 Pistes was developed for Group B motorsport. Its 1.4-liter engine offers 112 HP. The rather modest and conventional 4x4 conversion will cost $15,000 in France. Some 200 will be made for purposes of homologation. It will not be sold in the U. S.

An Alfa wagon by Zagato

Zagato Industrial Design developed this version of the Alfa Romeo 33 station wagon for exhibit at the Geneva Auto Show. Zagato calls it the Free Time. It can be configured to seat six, four, three or two persons.

Against a backdrop of a chaotic market

Few new products bow at Geneva

By Richard Feast
European Editor

GENEVA. — It was hard to tell that Europe is on the brink of record car sales when the doors to the annual Geneva Auto Show swung open.

In Switzerland last year, new-car registrations made an uncharacteristic downward movement (5.4 percent to 290,900) after new emission regulations reduced the variety of models on offer. This year the concern is speed limits, with every prospect of a 62-MPH restriction being imposed.

To the north, in West Germany, labor and management lumbered closer toward confrontation over the length of the working week. Lead in gasoline was once more featured in the speeches of every German auto executive in Geneva. As the major supplier of cars to Switzerland (42 percent), what happens in Germany will have deep reverberations here.

The situation in France is little better, although the truck drivers' strike the week before the show paralyzed the country. If a nation can shudder to a halt on account of so little, who needs new cars? Prospects for recovery in this respect are not good.

The drivers' action was against a background of large-scale layoffs across the whole industry. Talbot's labor cuts are to be followed by similar actions at Citroen and Renault.

• The issues seem especially parochial when it is apparent the motor industry is more and more thinking in global terms. Perhaps the national issues stem from the industry's increasingly international perspective.

Some examples: The recent East-West agreements made by Renault and Volkswagen, the very idea of an Italian Cadillac, the U. S. sending diddy little engines to Europe when all the world knows it only makes V-8s, Brazil steadily becoming a major exporter for Fiat, VW, Ford and GM, and Chevrolets made in Japan. No wonder the world is in turmoil!

The lack of new products at Geneva merely served to confuse the customer. Europeans are going to buy more cars this year than any in history, yet the only real novelties were the Renault 25 (already seen) and an interesting new engine and gearbox built by Porsche for a company that most people have never heard of.

And yet, competition has never been closer. The Big Six are covered by only 1.5 percentage points, and a false move by one could send it plunging from second to sixth.

In addition, the combined Japanese importers sold more than ever — over one million units, or one out of every 10 cars purchased. And this despite being denied full access to about 4 million customers in Italy, France and Spain because of sales restraints.

Geneva's major world premier was a new four-cylinder engine designed by Porsche for Spain's Seat. Porsche is reputed to have slipped the Spanish government (financial prop to Seat) a bill for $33 million for the privilege.

The engines are a single carburetor 1.2-liter (63-HP) and a 1.5-liter twin carb (85-HP). Alloy, crossflow cylinder heads are used.

Heron combustion chambers enable high compression ratios to be used with low-octane fuels.

While Seat has an engine it will not have its new Ibiza hatchback until June. This car, together with a model known as S-3 and to be launched in a year's time, will form the basis of an export drive into Europe by Seat, starting in earnest in 1986.

American Motors Chairman Paul Tippett was on hand to introduce Europeans to the new Jeep Cherokee station wagon which will be introduced in Europe this fall.

The belief is that AMC can sell up to 4,000 Jeeps of all types in Europe. It is looking for half that number of the new model by 1985, with strong showings in France and Belgium, where distribution will be by Renault.

In the fall a turbo diesel (by Renault) will be made available in the U. S.

Ferrari's homologation special, the GTO, will be the most expensive Ferrar ever—$97,000. The 400-HP car will not be sold in the U. S. Only 200 will be built, to comply with Group B racing regulations. It must be seen as a Ferrari response to the Porsche Gruppe B shown at last fall's Frankfurt show. That car will be homologated for the 1985 racing season.

It is not just the exotic auto makers interested in competition. PSA's Peugeot and Citroen divisions are homologating 200 models each for international rallying.

Citroen's Visa Mille Pistes is a more conventional and modest 4x4 conversion which will cost $15,000 in France. But the Peugeot 205 Turbo 16 (also four-wheel-drive) has a mid engine and will cost $37,500. Even then, Peugeot says it is a bargain.

Also thinking 4x4 but more realistically, Pininfarina and Alfa Romeo exhibited a station wagon version of the 33 with the system.

Audi has nailed its colors to the 4WD mast already. But when the VW group chairman said in a speech that a Quattro version of the 100 sedan was on the Audi stand, everyone rushed back to look for what they had missed. They hadn't, but it will be announced shortly.

Still talking 4x4, BMW sales director Hans Erdmann Schonbeck confirmed that his company will bring out such a car. He refused to give more details — except to underline that it will be an all-BMW project.

• Thanks to quickening production at Bremen, Daimler-Benz will build well over half a million cars this year. It has never hit that mark before, and clocked up a record 476,000 only last year.

On similar (but more modest) lines, Jaguar Cars will build almost 33,000 cars this year. That, too, will be a record.

The price competition in Scandinavia is heating up. After Brazilian-made Ford Escorts, VW will sell Seat-made Polos from Spain there this year.

Domestic sales climb 48 pct. for February

By Jenny L. King
Staff Writer

February new-car sales results continued the winning streak begun a full 12 months earlier, with the domestics reporting a 48.03-percent increase for the month and imports up 0.60 percent. The industry total was up 34.04 percent.

Domestic dealers retailed 655,016 new passenger cars during the leap-year month, more than 200,000 units ahead of February, 1983, and highest for the month in seven years. Back in 1977, 665,978 sales were reported in February.

Import sales were up only 1,000 from a year ago and their market penetration plunged to 22.14 percent from a record 29.64 percent in 1983. February import sales numbered 186,218, up from 185,109.

Combined sales for the first two months totaled 1,619,792, up 32.71 percent from 1,220,533 in 1983. Domestics were up 44.57 percent, to 1,238,445 from 856,619, and imports climbed 4.79 percent, to 381,347 from 363,914.

Ford Motor Co.'s February sales showed the greatest growth among the domestics in a year-to-year comparison. Ford was up 61.42 percent, to 165,170 from 102,321. General Motors was up 42.95 percent, to 373,910 from 261,560.

Chrysler Corp. sales of 80,425 new cars were 41.01 percent ahead of the year-ago 57,034. American Motors was up 24.65 percent, to 18,442 from 14,795. Volkswagen's U. S.-built Rabbit sedans were up 20.63 percent, to 6,654 from 5,516, and Honda multiplied its year-ago total by eight, climbing to 10,415 from 1,253.

• GM's share of the month's market slipped to 57.08 percent from 59.11 percent last year. Ford was up to 25.22 percent from 23.12 percent. Chrysler dipped to 12.28 percent from 12.89 percent. AMC was down 0.53 percentage points, to 2.82 from 3.35 percent. VW dropped to 1.01 percent from 1.25 percent, and Honda claimed 1.59 percent compared with 0.28 percent a year earlier.

AMC, whose product line has been trimmed from three nameplates a year ago to just one at present, was the only domestic make unable to surpass its February, 1983, sales mark. AMC was down 59.82 percent, while the Renault branch of the family was up 61.18 percent.

At GM, Buick reported February sales of 72,251 units, up 25.76 percent from 57,451 a year ago. Cadillac was up 28.27 percent, Chevrolet was up 45.35 percent, Oldsmobile was up 37.81 percent to a record 96,956 from 70,282 and Pontiac nearly doubled its sales with a 90.31-percent increase.

Plymouth was up 37.73 percent, Chrysler was up 46.67 percent and Dodge was up 40.34 percent. Ford reported a 57.68-percent sales increase, Mercury

Subaru to extend financial services to other makes

NEW YORK. — Subaru of America will extend the services of its subsidiary, Subaru Financial Services (SFS), to non-Subaru automobiles, both new and used, according to Harvey Lamm, president and chief executive officer of Subaru of America.

Lamm told a group of auto analysts here that SFS has been particularly successful.

For fiscal year 1983, SFS had outstanding loans and paper of $35 million. Robert Reich, executive vice president for finance and corporation treasurer, noted that 13 percent of the Subaru dealer body makes use of the services.

SFS has car financing, extended warranty and other programs.

ATAM officers

The 1984 officers of the Automotive Trade Assn. Managers (ATAM) are, from left: B. Wade Isaacs, North Carolina Automobile Dealers Assn., secretary-treasurer; William F. Morie, Georgia Automobile Dealers Assn., president; Richard K. Welte, Niagara Frontier Automobile Dealers Assn., vice president-president elect, and Keith W. Howard, Automobile Dealers Assn. of North Dakota, immediate past president.

Import model count climbs to 199

U.S. car buyers can select from 26 makes

By John K. Teahen Jr.
Managing Editor

Priced from $4,995 to $156,000, the leading makes of imported cars are offering 199 models to U.S. buyers as the spring selling season rolls in.

The total is up from 188 at this time last year, and it also tops the totals of other recent years:

	Import Models
March, 1982	180
March, 1981	181
March, 1980	156
March, 1979	158
March, 1978	150

The 199 models in this year's tabulation are offered by 26 makes and they account for virtually all of the imported cars sold in this country.

There are four new nameplates for 1984, and all are sporty autos. Bertone and Pininfarina are offered by Malcolm Bricklin's International Automobile Importers. Bertone is the former Fiat X1/9 coupe/roadster and Pininfarina is the former Fiat Spider convertible.

Also joining the ranks are the Dodge Conquest and Plymouth Conquest coupes which Chrysler imports from Japan's Mitsubishi.

Missing from this year's list are DeLorean, which has died; Fiat, which is no longer imported, and Dodge Challenger and Plymouth Sapporo, which were replaced by Conquest.

Who has the most models? Well, who has the most sales? The answers are the same. Toyota leads with 27 selections and Nissan has 24. From there on down, sales volume and model count of individual makes are not related.

By country of origin, it's a case of Japan and the Five Dwarfs. The Japanese makes have 115 models followed by West Germany, 38; Sweden, 16; France, 15; Italy, 8, and England, 7.

The import model total of 199 is well below the current domestic count of 293, but a closer look at those figures discloses some rather surprising similarities. Here's the comparison:

	Imports	Domestics
Four-door models	70	109
Two-door models	96	134
Convertibles	7	12
Four-door wagons	26	37
TOTALS	199	292

In percentage of model mix, the two groups are very similar. For the imports, 35 percent of the models are four-doors; for the domestics, it's 37 percent.

Two-doors (coupes, hatchbacks, hardtops) make up 48 percent of import total and 46 percent of the domestic fleet. Convertibles account for 4 percent on each side, and wagons make up 13 percent for each.

Some of the imports, incidentally, call their hatchbacks "three-door" or "five-door" models. Only the side doors are counted in this tabulation.

Import convertibles are offered by Alfa Romeo, Ferrari, Pininfarina, Porsche, Rolls-Royce and Volkswagen. Coupe/roadster types like Bertone X1/9, Porsche 911 Targa and Mercedes-Benz 380-SL are counted as coupes in this rundown.

One reason for the increase in import models this year is the inclusion of turbos, both gasoline and diesel. It is felt that turbos have enough differences in trim, equipment and mechanicals to merit the separate-model designation. In the past, they were included only if the turbo was the base engine.

In counting import models, Automotive News uses the same criteria as in tabulating U.S. cars. A choice of transmission (four-speed, five-speed or automatic) or a choice of engine size or type (gas or diesel) does not necessarily constitute a separate model. And vans are excluded from the count for both imports and domestics.

As noted, Toyota leads the imports with 27 models and Nissan is second with 24. Next in line are Subaru, 17; Mazda, 14; Mitsubishi, 11; Peugeot, 11; Volkswagen, 11, and Volvo, 10.

Totals for other leading import makes are: Honda, 9; Mercedes-Benz, 9; Audi, 8; Saab, 6; BMW, 5; Porsche, 5; Dodge Colt, 4; Plymouth Colt, 4; Ferrari, 4; Renault, 4; Rolls-Royce, 4; Isuzu, 3; Jaguar, 3; Alfa Romeo, 2; Bertone, 1; Pininfarina, 1; Dodge Conquest, 1, and Plymouth Conquest, 1.

The figures for Volkswagen, Renault and Honda do not include models made in the U.S. The VW Rabbit, the Renault Alliance and Encore and the Honda Accord and Accord LX four-door sedans are included in the domestic total.

For the especially well-heeled buyer who wants something really exclusive, there is another baker's dozen imports. Volume is extremely low, generally a few hundred or less. Thus, they are excluded from the model count for the leading imports.

This group and the models offered consists of Aston Martin, 3; Bentley, 3; Maserati, 2; Lamborghini, 2; TVR, 2, and Lotus, 1. Maserati is planning higher volume for its new Biturbo coupe, which is now arriving in the U.S. If the plans bear fruit, Maserati could be included in next year's list of "leading imports."

Alfa Romeo's turbo version of the 2-liter Giulietta sedan, shown at the recent Brussels Auto Show, has a power output of 170-BHP, up a third on the standard version. Known as the Autodelta Turbo, its top speed is nearly 130 MPH.

†estimate

Price increase averages $163.25

'Popular-priced' class falls to 51.5 percent of import sales

By John K. Teahen Jr.
Managing Editor

Imported-car prices have risen in the past 12 months. The average increases on 1984 models were considerably higher than in the preceding year, but they were not nearly so large as those of earlier years.

The annual Automotive News analysis found an average hike of $163.25 for the best-selling — or "popular-priced" — imports. It amounted to 2.52 percent.

It was nearly three times as much as the jump of $57.39, or 0.91 percent, recorded in the 1983 survey.

But that was an unusual year; the season-to-season hikes had been running much higher than that: $488.09 in the 1982 study, $812.60 in 1981, $187.89 in 1980, $600.02 in 1979 and $435.38 in 1978.

The boost of $163.25 is based on a comparison of 57 models offered by 10 makes. They are models that appear in both the current and the year-ago lineups of those nameplates.

The cutoff point was $8,000. Cars in that price class accounted for 51.5 percent of the imported autos sold in the U.S. last year.

The price limit and the share of market tell their own story of what has happened to auto prices through the years.

Automotive News began its annual analysis of import prices in 1970. At that time, the cutoff point for the popular-priced class was $3,000 and 93.5 percent of import-car sales were in that group. By 1978, the limit had risen to $5,000 and the market share was still an overpowering 79 percent.

In the last three surveys, the top of the popular-priced class has been $8,000. The market share was 69.8 percent in 1982. It dropped to 60.4 percent last year, and now it stands at 51.5.

Thus, nearly half of the import buyers are willing to pay more than $8,000 for their cars. Obviously, the person who selects a foreign auto is not looking for price alone.

In fairness to the imports, it must be noted that prices of domestic cars have risen as much or more than those of their foreign counterparts. In 1970 and for many years after that, it was possible to finance a new car, imported or domestic, by taking out an auto loan rather than a mortgage loan.

The 57 models in this year's under-$8,000 comparison are offered by Dodge Colt, Plymouth Colt, Honda, Isuzu, Mazda Mitsubishi, Nissan, Subaru, Toyota and Volkswagen.

Only two of those makes were anywhere near the average increase of $163.25. Subaru was a bit under the norm at $160 and Mazda was a bit over at $170.

Elsewhere, there were wide variations. On the Jetta models, Volkswagen made a diesel the base engine for '84 and priced those models $600 less than '83s with gasoline engines.

Only VW's imported models are included in this analysis, and Jetta is the only line under $8,000. Rabbit is omitted because it is a domestic car. Likewise, the U.S.-built Renault Alliance and Encore are also excluded.

Isuzu I-Mark prices are unchanged from a year ago, and the hike averaged $17 on corresponding '84 and '83 units in the Dodge Colt and Plymouth Colt lines. Mitsubishi Tredia and Cordia models in this segment climbed an average of $80.

Above-average increases in this class were posted by the three-top-selling imports. Toyota was up $242, Nissan was up $357 and Honda was up $368.

The average increase for the top five Japanese lines in this market segment was $245.20. Those lines are Toyota, Nissan, Honda, Mazda and Subaru.

In the medium-priced field — $8,001 to $15,000 — the increase during the past year averaged $544.95, or 5.22 percent. As in the lower-priced group, it was greater than the hike of $374.16, or 3.53 percent in last year's study.

But is was less than the average boost of $898.79 in 1982 and $1,067.34 in 1981.

The comparison in this class embraced 54 models offered by 12 makes. Included are the Toyota Camry, Celica and Cressida; the Nissan Stanza, 200-SX and Maxima; the Honda Prelude and most Accords, and the Mazda 626 and RX-7.

The VW convertible, Scirocco and Quantum fall in this range, as do the Audi 4000 and Coupe, the Mitsubishi Starion and topline Tredia and Cordia, the Volvo DL, the Saab 900 and 900-S, most Peugeot 505s, the Renault Fuego and Sportwagon and the Isuzu Impulse.

There are other imports in this price class, but they are newcomers so there is no basis for year-to-year price comparison.

Four makers boosted their medium-priced models more than the $544.95 average for the class. They were Mazda, up $696; Volkswagen, $704; Volvo,

Continued on Page E-18

Is everyone else asking too much? Or are we asking too little?

At Subaru, we truly believe in giving you the most car for the least amount of money.

The Subaru version of more car.

Some automakers talk about leg and shoulder room. Some talk about rack and pinion steering or front wheel drive. Others talk about durability and reliability.

Yet all that and more can be had in a Subaru Hatchback for a mere $4,989.*

And that's just the beginning.

We've proven that advanced cars don't have to be expensive cars.

Standard on every Subaru is front wheel drive for improved road holding. And only Subaru has a full line of vehicles that can go from front to "On Demand"™ Four Wheel Drive. We also offer Turbo-Traction™ — a combination of fuel injected turbo charging, "On Demand" Four Wheel Drive and automatic transmission. Both are innovations we pioneered.

At Subaru, being a pioneer in technology means we've discovered new ways to give you more for your money.

You save a lot when you buy a Subaru. And a lot more when you drive it.

Every Subaru — (Our practical Hatchback, family size Wagon, sporty Two Door Hardtop, open back Brat, even our luxury Four Door Sedan) is designed to meet the demands of the economy as well as it meets the demands of the road. The engineering that goes into a Subaru, and the high mileage** you get out of one, make it inexpensive to own. And drive.

What's more, many dealers also offer Subaru Added Security. It's the only extended service contract backed directly by Subaru.

So think about it. Is Subaru offering too much for the money? Or is everyone else offering too little?

SUBARU.
Inexpensive. And built to stay that way.

Seatbelts save lives.

*Suggested retail price for our STD Hatchback. Dealer's actual price may vary. Price does not include dealer prep, inland transportation, taxes, license, and title fees. Certain items shown optional at extra cost.

**34 EPA EST. MPG. 46 EPA EST. HWY. 1984 EPA estimate for our STD Hatchback. Use EST. MPG for comparisons. Your actual mileage will probably be less. ✓

S.) **Jetta**—2-door sedan (diesel, 4-speed, California only), $7,390; 2-door sedan (diesel, 5-speed), $7,390; 2-door sedan (5-speed, FI), $7,630; 2-door sedan (automatic, FI), $8,055; 4-door sedan (diesel, 4-speed, California only), $7,610; 4-door sedan (diesel, 5-speed), $7,610; 4-door sedan (5-speed, FI), $7,850; 4-door sedan (automatic, FI), $8,275. **Jetta GL**—4-door sedan (5-speed, FI), $8,210; 4-door sedan (automatic, FI), $8,635; 4-door sedan (turbodiesel, 5-speed), $9,210. **Jetta GLI**—4-door sedan (5-speed, FI), $8,690. **Scirocco**—Coupe (5-speed), $10,870; coune (automatic), $11,295. **Quantum GLS**—4-door sedan (5-speed, FI), $12,980; 4-door sedan (automatic, FI), $13,405; 4-door wagon (5-speed, FI), $13,-780; 4-door wagon (automatic, FI), $14,205. **Quantum GL**—4-door sedan (turbodiesel, 5-speed), $13,530; 4-door sedan (turbodiesel, automatic), $14,045; 4-door wagon (turbodigsel, 5-speed), $14,-330; 4-door wagon (turbodiesel, automatic), $14,-845. **Vanagon**—7-seater (4-speed), $11,675; 7-seater (automatic), $12,100; 9-seater (4-speed), $11,730; 9-seater (automatic), $12,155. **Vanagon GL**—7-seater (4-speed), $12,175; 7-seater (automatic), $12,600. **Vanagon Camper**—4-speed, $15,800; automatic, $16,225. **Power disk brakes** standard on all models. **Power steering** and **air conditioning** standard on Quantum. Radio standard on Rabbit convertible, Scirocco and Quantum.) (Prices do not include dealer prep fee.)

VOLVO—DL Series — 2-door sedan (overdrive), $11,330; 2-door sedan (automatic), $11,720; 4-door sedan (overdrive), $11,960; 4-door sedan (automatic), $12,350; 4-door wagon (overdrive), $12,385; 4-door wagon (automatic), $12,775. **GL Series**—4-door sedan (overdrive), $14,995; 4-door sedan (automatic), $15,385; 4-door wagon (overdrive), $15,550; 4-door wagon (automatic), $15,-940. **Diesel** (not available in California)—4-door sedan (overdrive), $15,480; 4-door sedan (automatic), $15,770; 4-door wagon (overdrive), $16,-035; 4-door wagon (automatic), $16,325. **Turbo**—2-door sedan (overdrive) $16,540; 2-door sedan (automatic), $16,930; 4-door sedan (overdrive), $16,850; 4-door sedan (automatic), $17,240; 4-door wagon (overdrive), $17,405; 4-door wagon (automatic), $17,795. **760-GLE**—4-door sedan (automatic), $21,225. **760-GLE Turbo Diesel** (not available in California)—4-door sedan (overdrive), $22,-035; 4-door sedan (automatic), $22,470. **(Power disk brakes, power steering** standard on all models. **Air conditioning** standard on Diesel models, Turbo models and all 760-GLE models.)

Continued from Page E-14

$714, and Audi, $1,735. Audi added a good bit of standard equipment.

Price hikes below the average were posted by eight makes: Peugeot, $53; Mitsubishi, $175; Honda, $277; Saab, $345; Toyota, $413; Renault, $466; Nissan, $499, and Isuzu, $500.

The medium-priced segment accounted for 36.2 percent of the imported cars sold in the U. S. last year, a major jump from 30.1 percent in 1982 and 24.7 percent in 1981.

The more expensive the car, the bigger the year-to-year price increase. That seems to be a lesson the imports have learned from their domestic rivals.

As noted, the lower-priced imports rose $163.25 in the past year and the mediums climbed $544.95. In the luxury class, the average was $1,049.08, or 4.24 percent.

The luxury class ($15,000 and up) accounted for 12.3 percent of last year's import sales, up from 9.5 percent in 1982 and 5.5 percent in 1981.

This year's comparison included 36 models from 11 makers. All Mercedes-Benz, BMW, Porsche, Jaguar and Alfa Romeo offerings are in this segment, along with the Audi 5000 and Quattro, the Volvo GL wagon, Turbo and 760-GLE, the Peugeot 505-STI and 604, the Nissan 300-ZX, the Toyota Supra and the Saab 900 Turbo.

Four makes had increased higher than the $1,049.08 average. They were Audi, up $1,063; BMW, $1,086; Mercedes-Benz, $1,332, and Porsche, $1,892. The Audi average requires a word of explanation: The 5000 sedan rose $2,125 and the Quattro coupe was unchanged.

Price hikes below the class average were turned in by Toyota, up $326; Saab, $460; Jaguar, $667; Alfa Romeo, $755; Peugeot, $845; Volvo, $904, and Nissan, $933.

In each of the three classes — popular-priced, medium-priced and luxury — the Automotive News analysis was based on comparable models, those that appear in the current and year-ago lineups of a particular make. In a few cases, models that occupy the same relative position in a maker's lineup were used.

Prices considered were Manufacturer's Suggested Retail Prices. Where prices differ by geographic areas, East Coast prices were used.

Data on changes were based on an arithmetical comparison of prices in effect on March 1 or this year with those in effect a year ago. For models introduced later in the '83 model year, introductory prices were used. There was no sales-weighting, and no adjustment was made for year-to-year equipment changes.

Average Transaction Price Per New Car

	Expenditure Per Car		
Year	Domestic	Import	Average
1960	$ 2,918	$ 2,062	$ 2,853
1961	2,897	2,027	2,841
1962	2,981	1,992	2,933
1963	3,018	2,017	2,968
1964	3,011	2,058	2,954
1965	3,074	2,120	3,016
1966	3,140	2,174	3,069
1967	3,310	2,272	3,212
1968	3,531	2,353	3,406
1969	3,697	2,496	3,557
1970	3,708	2,648	3,542
1971	3,919	2,769	3,742
1972	4,034	2,994	3,879
1973	4,180	3,343	4,051
1974	4,523	4,022	4,439
1975	5,083	4,376	4,948
1976	5,504	4,912	5,414
1977	5,985	5,057	5,811
1978	6,481	5,937	6,382
1979	6,906	6,705	6,861
1980	7,630	7,492	7,591
1981	8,940	8,894	8,929
1982	9,880	9,785	9,853
1983	10,484	10,664	10,530

Foreign firms gain tire footholds

Japanese and Europeans invest heavily in U.S. manufacturing

By Roger Rowand
Engineering Editor

TRUCKEE, Calif. — Just the other day this snow-covered Sierra village was the scene of a brief but brisk skirmish in a war that's heating up among world tire makers.

In this particular battle, Michelin Tire Corp. of France was pitted chiefly against Goodyear Tire & Rubber Co. of Akron. The weapons were new all-season tires and the spoils included favorable response from the press.

Michelin showed off its XA4 tire and, in the mountains above Reno, dramatically demonstrated its prowess as a tire for mud, snow, rain and dry roads.

As it did so, Michelin with its XA4 was going head to head against Goodyear and its Vector, a tire of similar abilities which was introduced earlier this year, too.

In tests for members of the press, Michelin ran the XA4 against such passenger car four-season tires as the Firetone 721 Metrix, the Uniroyal Tiger Paw Plus, the General Ameriway and, of course, Goodyear's Vector.

Michelin's efforts point up a developing long-range trend in the tire industry—foreign firms gaining footholds in the U.S. with local manufacturing.

Michelin since 1975 has built tires in the U.S., Japan's Bridgestone Tire Co. Ltd., has bought an aging tire plant in LaVergne, Tenn., from Firestone Tire & Rubber Co. and Sumitomo Rubber Industries has just acquired the European business of Dunlop Tire & Rubber Corp. Dunlop has important U.S. operations, and Sumitomo's influence is certain to be felt in this country. Sumitomo, until the early 1960s, was Dunlop Japan Ltd., and still makes all the Dunlop tires made in the Far East.

Dunlop last month said it will spend up to $100 million over the next five to seven years, at its plant in Buffalo, N.Y. The money will be spent in installing equipment for building low-profile truck radials and to expand and modernize other parts of the 60-year-old facility. Sumitomo is expected to supply the R&D for that plant from the Dunlop research center in Europe.

Bridgestone is reported to have study teams looking into the possibility of acquiring or building another plant in the U.S. An announcement, Akron sources say, may come later this year.

That news can be expected to bring a chill to some in the tire-making game.

"I consider Bridgestone our most formidable competitor," Scott H. Buzby, president of Goodyear, told AUTOMOTIVE NEWS at Vector's press introduction in Akron.

He said Michelin previously was Goodyear's toughest foe but has lost that distinction for a number of reasons.

"Bridgestone comes off the mark a lot faster. They don't wait and take four or five years to develop something. They just take what we come up with, give it the old Japanese treatment and off they go," Buzby said.

After World War II, Goodyear assisted in building up the Japanese tire company and had, until about two years ago, a technical exchange agreement with it. "We built our own competition," Buzby said.

"Bridgestone is much more flexible than Michelin. They're more aggressive in marketing and Michelin suffers tremendously from the NIH syndrome," the Goodyear president said.

"Look at the all-season tire. We've been out with it for seven years. Within 18 months we had 70 copies of it here in the U.S. Today, seven years later, Michelin condescends and figures there must be something to it. That same problem seems to exist in everything they do," Buzby said.

"But, don't get me wrong. They're still very strong, very formidable competitors," he said.

The XA4 is Michelin's first all-season tire. Goodyear introduced its first, the Tiempo in 1977 and followed with Arriva in 1980. Its third generation, Vector, bowed this year.

The importance of all-season tires to any maker is apparent with a look at sales projections, said Alex Jankowsky, Michelin corporate sales manager.

"On an industry basis, all-season tires captured 20 percent of the replacement market in 1983 and they should hit 23 percent this year and go to 35 percent in 1987," he said.

Michelin has about 8 percent of all types of aftermarket sales

Sarajevo, Yugoslavia—the site of the XIV Winter Olympic Games—is snowbound for 200 days a year, and Mitsubishi, supplier of official Olympic vehicles, used Bridgestone tires to help meet transportation demands for adverse weather conditions. Bridgestone supplied more than 500 snow and radial tires for the vehicles which moved officials and athletes from venue to venue during the Games.

The name no one else can take.™
Only Chapman® Dealers have it.

Only Chapman automotive security systems offer you the quality and reputation that bring traffic in and keep it coming, car after car. Only with Chapman do you get these profit-making traffic builders.

- Exclusive patented dead bolt lock
- Exclusive patented ignition suppressor
- New, exciting modular Generation III™ anti-theft system concept that brings in repeat and add-on business
- Recognition and reputation as the nation's leader
- Only Chapman does major television advertising
- Major print campaign to support TV
- Strong point-of-purchase support
- Colorful and informative sales materials to help you make the sale and increase your profits
- Take the lead in profits with the sales leader

Do you?

Tires

Continued from Page E-20

and a similar share of the original equipment market.

Michelin supplies original equipment XA4 tires to General Motors, Chrysler Corp., Honda of America Manufacturing and American Motors.

There are some interesting influences at work which affect tire sales volume and the rate of radialization.

The number of miles driven annually by the average motorist, after declining sharply in the post-Arab-oil embargo years, has begun to climb again. Also, small spare tires until recently have been bias-ply construction, not radial. Goodyear, however, has introduced a Space Saver radial-ply spare and the statistics are changing again.

In addition, today's smaller, lighter cars by their nature put less wear and tear on tires than predecessor cars did.

Also important on the tire wear scene is the fact tires themselves are more durable with expected tread life skyrocketing in recent years.

The exact mileage any motorist will attain depends on driving habits, the degree of maintenance and types of roads, of course, but Goodyear calls 50,000 miles an attainable goal for Vector tires. Michelin puts its comparable figure for the XA4 at 60,000 miles.

Michelin has car-tire plants in Greenville and Lexington, S.C., truck-tire plants in Spartanburg, S.C., and Dothan, Ala., and a support plant in Anderson, S.C.

It continues to import other types of tires, such as those for motorcycles, from Europe. In Nova Scotia, Michelin has three plants turning out tires for off-road vehicles, trucks and passenger cars.

It would be fitting, indeed, if Michelin, developer of radial-ply tires, led another parade in the tire game. As Michelin made strong inroads into the U.S. market, other major tire makers jumped on the French firm's bandwagon and plunged into the radial tire business where Michelin had led the way for years.

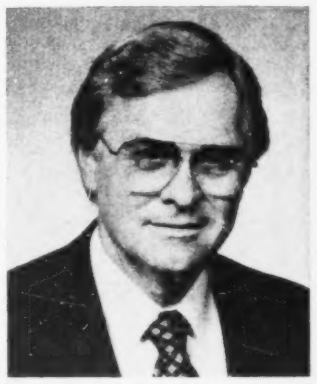
In 1977 the follow-the-leader routine favored in tires was followed again as all the major makers except Michelin trooped after Goodyear and introduced all-season tires.

Michelin engineers say their competition quickly introduced those tires but, in doing so, sacrificed such qualities as tread wear, ride and handling.

Sales manager Jankowsky said Michelin deliberately waited to enter the market with an all-season tire. "To do so prematurely would have seriously jeopardized our tire performance standards and our worldwide reputation for superior quality and value," he said.

"We simply decided not to market a tire with added winter traction at the expense of tread life. An all-season tire with the Michelin name on it had to offer the best of both worlds," he said.

Michelin is supplying six sizes of its new all-season tire to auto builders this model year and will boost that offering to 13 sizes in the 1985 model year, according to Sterling Shephard, original equipment engineering manager.



Sterling Shephard says Michelin's all-season OE tire will be expanded to 13 sizes in the '85 model year.

Goodyear was the first, in the '84 model year, to supply all-season rubber to all four U.S. car builders. Firestone Tire & Rubber Co. in the same car year, began providing its all-season WR-12 tires to General Motors.

U.S. tire sales estimates
(in millions)

	1983	1984	1987
Aftermarket	132	135	136
Orig. Equipment	44	49	53

All-season tire sales
(as percent of total)

	1983	1984	1987
Aftermarket	20	23	35
Orig. Equipment	42	50	70

Radial tires sales
(as percent of total)

	1983	1984	1987
Aftermarket	68	73	84
Orig. Equipment	83	85	86

Shephard said the XA4 represents "the latest tire technology in a well-balanced design developed in the U.S. for American roads and U.S. cars and meets the needs and desires of the American driver.

"This is a balanced and competitive product that keeps Michelin in the forefront in tire technology and, finally, keeps us one step ahead," Shephard said.

Michelin engineers contend their plants are the most modern in the U.S.

The XA4 tires will retail at prices about 5 to 10 percent higher than Vector's. But, a Michelin man says: "The most important thing is not the price you pay for a tire. The most important thing is what you pay per mile."

Another authority on the tire industry, looking at the world picture, says product development work is becoming interlocking on a global basis. "Continental has an agreement with General which has an agreement with Sumitomo and the next thing you know they're all drawing off the same shelf.

"In essense, what you have is socializing, except for people like Michelin, Bridgestone and Goodyear. They don't go into pools. They're not interested because they are big enough to sustain themselves," he said.

From Buzby's point of view at the top of Goodyear, which calls itself the world's largest tire maker, more U.S. production facilities are essential to foreign firms.

"If they want a piece of the action they've got to come on shore. That's one of the reasons you'll see Bridgestone, probably before the end of this year, buy a tire plant to produce Bridgestone tires here," he said.

A changing Japanese auto industry

How long can Japan sustain so many car companies?

By John Hartley
Staff Correspondent

TOKYO.—Toyota perennially has dominated Japan's new-car market and continued to inch up in market share last year.

While the total market expanded 3 percent in 1983 to 2.95 million cars, Toyota sales pushed up 6 percent to 1,197,000 units for 40 percent of the market.

Toyota switched from rear- to front-wheel-drive for the Corolla sedan, which has continued to dominate the sales charts, although, due to increasing competition in the 1.5-liter class, its total sales fell from 231,000 to 207,000.

That would have been a serious drop except for the success of the Tercel whose sales shot up from 100,000 to 150,000, and the fact that the Corolla's sister, the Sprinter, also did much better.

About 70 percent of Corollas and Sprinters sold in Japan are sedans, 24 percent are coupes, mainly with the 16-valve engine, and only 6 percent are five-door hatchbacks.

For 1984 Toyota expects to produce 3.37 million vehicles against 3.27 million in 1983, and in Japan is looking for a sales increase of about 4 percent. Overall, it plans to export 1.71 million vehicles, including trucks, up 3 percent from 1983.

Shoichiro Toyoda, Toyota's president, says the industry situation is likely to remain "harsh because of the year-long extension of the self-imposed restraints on exports to the U.S., and strength of the yen against European currencies."

In Europe the Japanese face much stronger competition than in the past, especially from small cars such as Fiat Uno, Peugeot 205 and VW Golf (Rabbit).

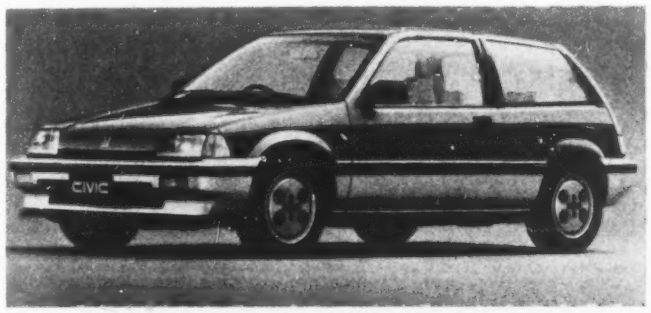
In Japan, Nissan Sunny (184,000) and Mazda GLC (174,000) were second and third biggest sellers, and helped give their companies a good market share.

Nevertheless, neither Nissan nor Toyo Kogyo did as well in 1983 as they had hoped. Nissan managed to increase passenger car sales by 2 percent to 801,000, for a tiny loss of market share. As the year ended, there were no real signs of the slide being reversed, since the new Bluebird and Cedric/Gloria are maintaining, rather than increasing, sales levels, while other new models, such as the 200SX and 300ZX, sell in small volumes.

In Japan, Nissan is launching the Volkswagen Santana, but dealers are saying they will not be able to sell as many as Nissan wants; the original plan called for 4,000 a month.

As Nissan management looks back on a depressing year, the question is being raised as to how long it will be before Katsuji Kawamata, chairman, and Takashi Ishihara, president, step down.

For 1984 both Nissan and Toyota are forecasting domestic growth of around 4 percent. Nissan president Ishihara expects just over 3 million passenger cars to be sold in Japan, and that Nissan "will continue to strengthen its marketing capability and further consolidate its product lineup." However, he is counting on the Cedric/Gloria and Bluebird to provide some growth. Therefore, he is looking for sales of 919,000 cars, an increase of 8.4 percent, which seems very optimistic unless Nissan's forecast for the total market is conservative.



Honda Civic won Japan's car of the year honors.

The Aska, a version of GM's J-car, hasn't improved Isuzu's fortunes.

Mazda GLC continues to sell big in Japan.

The new Honda Civic and Mitsubishi's redesigned Colt were introduced too late to make a significant mark in 1983, but this year things should be different. The new Colt has started off at double the sales rate of the old one at around 8,000 units a month, while Honda is selling over 9,000 Civics and 2,500 Ballades monthly.

Although the new Civic has hurt City sales, Honda sales overall are rising by 5,000 units monthly. This means Toyota Corolia and new Mazda GLC seem destined to lose sales this year.

Overall, 1983 was disappointing for Honda in Japan, largely because the new Accord has not attracted the sales expected. One reason is Honda's sales network is weaker than its opposition's. Another is that many competitive front-drive sedans have been introduced by established rivals.

Thus, although Honda managed to increase car sales by 2.6 percent to 239,670 units, it failed to make the 15 percent improvement it set out to achieve.

The major problems facing Honda's new president, Tadashi Kume, are how to increase domestic sales of the Accord and how to continue to reach the Civic target of 12,000 monthly without stealing sales from City.

Toyo Kogyo also looks at 1983 with disappointment in the Japanese market, although it continued to export as fast as it could. Despite the launch of the 626 at the end of 1982, the company lost sales by 1.7 percent, and just managed to stay ahead of Honda by a handful, with 239,600 sales. This year, TK hopes a revised GLC may help, and there are signs the 626 may do better. The RX-7 line has also been expanded with introduction of a turbo model which should generate some sales. However, in Japan the RX-7 is a very small seller, averaging around 130 units a month last year.

• Mitsubishi also had a very bad year at home in 1983, but Toyoo Tate, its new president, can look back on improvements the last few months as the new small Colt and medium-size Sigma Galant came to market. Overall, Mitsubishi was a big loser in 1983, with domestic sales falling 18 percent to 163,000 cars. This year it is likely to regain that lost ground.

But Japan's biggest loser was Isuzu. It invested in a line of engines in the 1.6 to 2.0-liter class, and in its version of the J-car, the Aska. Yet it managed to lose sales volume compared with 1982. It dropped to 57,800 units, whereas, it has expected to increase domestic sales to 80,000. In exports, which depend principally on trucks, Isuzu also saw sales drop by 10 percent. In Japan, the Aska took sales from the Gemini, so the result of Isuzu's investment has been to increase capital and manufacturing costs significantly for virtually no increase in production.

This spring, Isuzu will launch its front-wheel drive R-car which replaces the Gemini, and expects to increase sales by at least 3,000 units a month. However, the economy of scale that was to have come from exports to the U.S. will not be realized, so Kazuo Tobiyama, who took over as president of Isuzu Motors in February, is facing the toughest time of any Japanese auto chief.

Isuzu's plan to export 200,000 R-cars to GM for sale as Chevrolets in the U.S. starting in May, lies in ruins now that it is limited by the self-restraint rules to only 47,000 for the next 12 months. Moreover, this figure includes Impulses which are sold very profitably in the U.S. at the rate of about 1,000 a month. On top of that, GM-Holden's (Australia) has decided to buy Nissan Pulsars instead of the R-car. With Corolla, GLC, Civic and others produced at lower cost and sold through stronger dealer network Isuzu will have to fight desperately for sales in Japan.

On top of that, because Isuzu is in such financial difficulties, GM converted its loan into stock, and now holds about 43 percent of the shares.

Meanwhile, Isuzu has been investing heavily in a new plant in Hokkaido to produce the R-car and its powertrains. Certainly, the R-car is a make-or-break project for Isuzu.

Isuzu's plight raises the question of how long Japan can sustain so many car companies. Isuzu's bankers are said to be urging the company to quit car manufacture and concentrate on its more successful trucks and diesel engines. The only way Isuzu can do that is for GM to build the R-car itself, which is likely to happen anyway.

Over all this hangs the specter of whether GM will now start to demand greater access to information and control of Isuzu management. Tobiyama could not have taken over at a worse time.

Another company with a vulnerable car business is Fuji Heavy Industries, which fortunately has lucrative contracts from Boeing for major parts of the 767. Fuji is just now launching the Subaru Justy, a production version of the prototype that appeared at the Tokyo Motor Show. To some extent, this is a make-or-break addition to the Subaru line. If successful, it will turn Fuji into the three-line company it needs to be. If not, the cost of the project will have an adverse effect on the next 550 and 1600-cc cars to be developed.

Fuji also had a poor 1983 in Japan, with sales slumping 10 percent to 33,900 cars. Fortunately, it managed to increase

Continued on Page E-36

Production up in Japan

Mini-vehicle sales reach record level

In 1983 Japan produced 11,111,659 motor vehicles consisting of 7,151,888 passenger cars, 3,903,823 trucks and 55,948 buses. Overall production increased 3.5 percent.

Japan's total worldwide vehicle exports were 5,669,510 in 1983 compared to 5,590,513 in 1982, a 1.4 percent increase.

Passenger car exports increased 1.0 percent to 3,806,396 with truck exports up 2.8 percent to 1,822,428 units. Bus exports in 1983 dropped 13.3 percent.

Overall vehicle shipments to the U. S. rose 6.1 percent in 1983 to 2,234,375. Continuing under export restraint, passenger car shipments to the U. S. remained approximately the same — 1,697,852 in 1983 compared to 1,691,806 in 1982.

Sales in Japan's domestic automobile market in 1982 showed a 2.3 percent increase over the previous year to 5,382,316 from 5,261,431.

Mini-vehicle sales were at a record level of 1,402,464 in 1983, a 5.1 percent increase from 1982's record 1,334,695.

All figures are on unit basis. (1) Production figures reported by all automobile manufacturers in Japan. (2) Size definitions are according to Japanese classification by piston displacement as follows: Regular, 2,001 cc and more; small, 551 cc to 2,000 cc; mini, 550 cc and less. (3) New vehicle registration (in Japan) figures are compiled by Japan Mini-Vehicle Assn. and Japan Automobile Dealers Assn. All others sourced by JAMA. (4) All export figures are as reported by individual manufacturers. (5) Export figures include automobiles in knock-down form exported to overseas countries for assembly. (6) Export figures to U.S. include Alaska and Hawaii, but do not include Puerto Rico and other island territories governed by U.S.

The exclusive importer

There are 2,750 of them in the U.S.

By John A. Russell
New York Staff Writer

NEW YORK. — Exclusive dealerships are not considered a prime objective of most importers because of the business realities of the automobile world.

The basic factor governing exclusivity is whether the local market can sustain the dealership. In most cases outside metro areas, it will not. Importers are well aware of this fact of life.

Consequently, only 2,750 of the 10,096 import franchises in the U. S. are exclusives.

Says Sten Helling, vice president - sales and marketing, Saab Scania of North America: "We encourage them, but only when it makes sense." The encouragement usually is confined to major markets.

Most importers agree with that philosophy, but stress that whether a dealership is exclusive or dualed has no bearing on the amount or type of factory support the dealer receives. All are treated equally.

Andrew Pokorny, general sales manager, BMW of North America, says that in larger markets, where there is high import penetration, his company encourages dealers to become exclusives where warranted.

For BMW, exclusivity means a separate showroom, and parts and service departments staffed by persons dedicated only to BMW. The company has one of the larger exclusive percentages among European importers with 110 of its 414 dealers (26 percent) being exclusive.

BMW's exclusives, 72 (62.5 percent) are in east or west coast markets with high import penetrations.

A key point noted by William Hoover, vice president - marketing, Volvo of America, is the relationship between sales and exclusives. In Volvo's case, while exclusives account for 26 percent of its 405 dealers, they contribute 35 percent of Volvo's car sales. Hoover says Volvo management groups have turned down dealer requests to become exclusive because it is not in the dealer's best interests.

As for operating differences between exclusive and dualed dealers, James Fitzhenry, general sales manager, Peugeot Motors of America, says there are none.

Import company executives agree that good businessmen operate good businesses whether they are exclusive or dualed.

REMANUFACTURED BMW PARTS EVEN MAKE BUSINESSES MOVE FASTER.

BMW's are widely known for their quickness on the open road.

But they can also move quickly through your repair shop—when you use remanufactured BMW parts.

Because instead of going through the time-consuming and costly process of rebuilding BMW components yourself, you can simply replace them with ones that have been restored to their original standards—by BMW.

But remanufactured BMW parts don't just save you time and labor. They also allow you to take on difficult jobs that would ordinarily require expensive rebuilding equipment. And they eliminate the need for assistance from outside machine shops.

They eliminate inconvenience, too—because all remanufactured BMW parts are available from your local BMW dealer.

And perhaps most importantly, they even help eliminate anxiety—thanks to a 12-month/12,000-mile limited warranty against defects in materials and workmanship.*

All told, remanufactured BMW parts are engineered not only to maintain BMW's, but to improve the performance and efficiency of your shop as well.

And, of course, to accelerate your profits.

GENUINE BMW PARTS

First-time car buyers shun market

But sticker shock doesn't bother upscale purchasers

By Matt De Lorenzo
Los Angeles Reporter

LOS ANGELES. — Import restrictions and higher overall prices on domestic and import models alike, are keeping an increasing number of first-time buyers out of the new-car market, according to J. D. Power & Associates.

The Westlake Village - based market research firm's latest Automotive Consumer Profile, has found that the average income of new-car buyers has been rising, as is the price they expect to pay for a new car.

Meanwhile, the price expectation and average income of used-car intenders have remained relatively constant.

"The market is definitely going upscale," Dr. John Hemphill, vice president-market anlyst, says. "Income has gone up in a step-wise fashion. If you look at those who intend to buy, about $10,000 separates the new from the used-car intender in household income. That's up about $4,000 to $5,000."

The more upscale the buyer, Hemphill notes, the less likely they'll be subject to sticker shock. "If you look at the price these new-vehicle intenders plan to pay, you see that they have a good idea what the market is. There's not that sticker shock. What the new-vehicle intender plans to pay has gone up faster than the used-car intender."

Hemphill puts this difference at about $7,000, noting used-car buyers are looking in the $3,000 range, while new-car buyers are prepared to spend $10,000. "This suggests the market is definitely upscale for both domestic and import models," Hemphill says.

That difference wasn't as great three years ago when the median price facing a new-car intender was about $7,500, while the used car buyer was looking at a $2,500 price tag.

"The ability of imports to reach the blue-collar segment is inhibited by restrictions," Hemphill says. While it has inhibited the ability for this segment to acquire Japanese cars, it has not made them any less desirable among the group.

Hemphill says the Japanese have made inroads into attributes that have enhanced the image of imports in general. "They have moved from an image of fuel economy and being cheap to an image of dependability, value for money and quality."

These inroads "have inevitably led to appealing to an upscale group who happen to be more active in the marketplace" than lower income groups.

More importantly, Hemphill says age distribution hasn't changed among imports, which are still drawing a median age of 35 or 36, while, on the average, domestic buyers are seven years older.

Yet, despite the difference in ages of the two groups, their median household income is almost the same.

"It means imports are pulling in the leading edge of the baby boom," Hemphill says. This leading edge is critical because many of them are the opinion leaders of their peers and, therefore, are trendsetters.

• J. David Power, president of the market research firm, says Japanese imports, while moving upscale, have not radically altered their mix of vehicles. Instead higher line versions with more dealer-installed options are going out the door, and that has increased the average price of imports.

"What is obviously happening is that there is a restricted supply of cars that consumers want," Power says. "Japanese imports have shown some restraint in not trying to go upscale. When it gets into the dealer's hand, the dealer plays in the pure market sense. The market seeks its level at the dealership level."

There is some richening of the mix by car manufacturers, but dealers pricing the vehicles at what the market will bear have had a greater impact.

Power says it would be folly for imports to go whole hog on dropping small cars and bringing in high-gross vehicles only. "They would be in a tough position if import restraints were dropped altogether," he says.

Yet the fewer number of price - leader models available coupled with higher prices charged by dealers "mean less cars for lower - middle income people," he says, which in turn "is setting up a market for micro-mini cars. There's a big void in the low end of the market that will open things for Suzuki, Hyundai, Daihatsu and Daewoo."

According to Power market studies, age, income and educational level of domestic buyers have crept upward the past three years, while median-price paid jumped dramatically in '83. The traditional blue collar domestic-car buyer is not represented in the current auto recovery, according to the Power figures.

Likewise, among imports, average price paid, educational level and income have risen or remained constant. If there were an abundance of entry-level vehicles available, those medians could be lower as the result of blue collar crossover; but because of restraints and higher car prices, many new-car intenders are being kept out of the bottom end of the market.

Hence, minis such as the Chevrolet Sprint (built by Suzuki) could be the next big wave in the auto business. "There's a boom waiting in the $4,000 to $6,500 range," Power concludes.

MEDIAN PRICE EXPECTED TO PAY FOR NEXT VEHICLE PURCHASE

Sir Brian leaves Ford

Ends long Asia-Pacific career

Sir Brian Inglis, chairman of the board and chief executive officer of Ford Asia-Pacific, Inc., will retire effective April 1, according to Ford Motor Co. chairman Philip Caldwell.

Sir Brian, who had a 35-year career with Ford, was responsible for the company's operations throughout the important Asia-Pacific area.

"Under his guidance, Ford made great strides in that region in which Ford's sales totaled nearly a quarter-of-a-million vehicles last year. He was largely responsible for the development of the Australian Falcon which is today that country's best-selling car. It is fitting that his retirement comes shortly after Ford achieved sales leadership in Australia and, in doing so, ousted General Motors from it's 30-year dominance in that market," said Caldwell.

"Apart from his dedicated service to Ford, he played a role of considerable distinction in Australia, which resulted in his being knighted in 1977. We are very appreciative of the outstanding contribution he made to his country and this company," said Caldwell.

Upon his retirement, he will be succeeded as chief executive officer for the region by Alexander J. Trotman, a Ford vice president who is president of Ford Asia-Pacific.

Sir Brian also is a member and chairman of the board of Ford Australia and a director of Toyo Kogyo Company, the Japanese manufacturer in which Ford has a 25 percent equity. He will continue in these capacities following retirement.

Born January 3, 1924, in Adelaide, South Australia, Sir Brian attended Melbourne University and the University of Michigan, and holds a bachelor of science degree in metallurgy from Melbourne.

He joined Ford of Canada in 1949 as a member of the management training program in Windsor, Ont. While in North America, he handled industrial and manufacturing engineering assignments in Ford plants in both the U. S. and Canada.

On his return to Australia in 1951, Sir Brian became head of the Industrial Engineering Department at the Ford manufacturing and assembly complex at Geelong. He was responsible for planning and implementing major expansion programs at Geelong and for establishing the company's Broadmeadows Assembly Plart.

In December, 1963, Sir Brian was elected a director of Ford Australia and named general manufacturing manager. In October, 1967, he became director of manufacturing and supply, and in 1970 he was appointed managing director. Named vice president - operations for Ford Asia-Pacific in 1981 and president the following year, he assumed his current post last July.

For distinguished service to industry, Sir Brian was created Knight bachelor in the 1977 Federal Honors List of the Queen of England.

Sir Brian was a member of the Melbourne University Appointments Board for 10 years beginning in 1970. He was president of the Federated Chamber of Automotive Industries for a record term of three years, 1972-75, and was for three years a member of the Australian Export Development Council. He served with the Federal Government's Economic Consultative Committee in 1976-77, and as chairman of the Australian Manufacturing Council and member of the Crawford Study Group on Structural Adjustments in 1977-79. He served a further term as president of the Federated Chamber of Automotive Industries from 1979 to 1981.

He was granted honorary membership in the Society of Automotive Engineers in 1980, and named a Fellow of the Australian Academy of Technological Science in 1983.

Imports hike TV outlays

Nissan tops Toyota as biggest spender

By Joseph Bohn
Marketing Editor

Import auto companies boosted TV spending by 13.4 percent in 1983, Broadcast Advertisers Reports data indicate.

Some 12 major importers last year spent $295.2 million in TV advertising compared to $260.4 million in 1982.

Data for 1983 are available only for TV at this time; the medium generally accounts for the lion's share of ad budgets and indicates the general trendline of spending.

Among the two top importers, Nissan outspent Toyota, largely because of its aggressive truck sales drive.

Nissan has a fairly nigh production level to sustain at its Tennessee plant, making the company extremely aggressive in the truck segment.

Importers generally have waged their fiercest competition in the small-truck market since it's unfettered by quotas.

In total spot and network TV, Nissan spending jumped to $76.7 million in 1983, up 28.2 percent from the previous year.

Toyota spending dropped 1 percent to $65.4 million.

Both companies are spending far more in spot TV than network, indicating they are picking their target markets very carefully.

By comparison, Volkswagen, Mazda, Honda and Subaru, are staying with a more traditional heavy-network format.

Among major importers, Honda showed the sharpest increase, its TV spending climbing to $22.5 million, up 59.3 percent.

That's due more to a shift away from other media into TV than to a big jump in Honda's overall budget, since the company tends to have only modest year-to-year increases in its ad budgets.

Among smaller volume importers, Mitsubishi and Peugeot are the fastest comers, with increases of 236 percent and 293 percent in TV spending, respectively, BAR data indicates.

The only significant drops in TV spending last year occured at Mazda (Toyo Kogyo), down 21 percent, and BMW, off 32 percent.

Lotus names Weber

NORWOOD, N. J. — James B. Weber has been named national sales manager of Lotus Performance Cars here, responsible for U. S. sales, dealer development and public relations.

Higher sales per dealer

Japanese outlets take top four spots

By Jenny L. King
Staff Writer

Not only did the new-car sales picture brighten in 1983, but the number of sales per outlet improved substantially for dealers handling both domestics and imports.

Retail deliveries climbed just over 15 percent in the last calendar year as the dealer population stabilized, producing higher averages for those still in the business of selling cars.

As was the case in 1982, there were only four domestic makes among the top 10 when the 1983 sales per outlet by make chart was figured, using AUTOMOTIVE NEWS dealer census figures and annual industry-wide sales totals.

The best four in sales per outlet were Japanese. Toyota had the lead, followed by Honda and Nissan.

Mitsubishi, finishing its first full year on the U.S. market in 1983, took fourth place away from the top domestic make, Oldsmobile, which lapsed into fifth. Buick was sixth, Chevrolet was seventh, Ford eighth, Mazda ninth and Volvo — the only European make in the top 10 — was tenth.

Average sales per outlet including domestics and imports reached 374 last year, up from 323 in 1982. The domestic average was 330, compared with 277 a year earlier, and the imports sales per outlet averaged 235 in '83, compared with 200 in '82.

All five major U.S. auto makers increased sales per outlet 1983 vs. 1982. General Motors expanded to 402 from 338. Ford Motor Co. climbed to 289 from 243. Chrysler Corp. beefed up its corporate average to 226 from 189.

At American Motors, where the final tally included AMC products, Renault Alliance/Encore and Renualt imported models, the 1983 total climbed to 125 from 96 a year earlier. Volkswagen, including domestic Rabbits and imported nameplates, was up to 177 from 164.

• Honda sales per outlet include cars built in Ohio and those imported from Japan. As its 1983 total was about 13 percent Ohio-sourced, Honda is still considered an import in the AUTOMOTIVE NEWS dealer census.

Two domestic and six import sales per outlet records were set in 1983. Oldsmobile, at a new high of 320, erased its 1978 record of 302, and Buick likewise obliterated a 1978 record of 256 with its 1983 average of 288.

Imports with new benchmarks were Nissan, Volvo, Mercedes-Benz, BMW, Saab and Jaguar. Nissan's 479 was better than its 475 in 1980. Volvo, at 220 sales per outlet, improved on the former record of 185 set in 1982. Other 1982 records laid to rest were Mercedes', BMW's, Saab's and Jaguar's.

The domestics-only lineup, 1983 versus 1982, shows Oldsmobile holding on to the top spot among the 13 U.S. makes. Buick remained second, Chevrolet third and Ford fourth.

SALES PER OUTLET BY MAKE: TOTAL U.S. MARKET

	1983	1982	1981	1980	1979	1978	1977	1976	1975	1974

Bring in the Bitter

Goal is 40 to 50 dealerships in U.S.

Bitter Automobiles/Germany has moved into the American market, bringing with it not only its European SC Coupe, but introducing a new four-liter engine American edition.

The four-liter engine — the first to be developed by Bitter exclusively for its automobiles —will be available as an option. It is basically a long-stroke version of the standard three-liter, providing more torque and BHP.

Bitter-Automobile of America Inc. was formed in 1983 when Erich Bitter teamed with co-director Lee Miglin, a Chicago developer, to bring the Bitter automobile to the U.S.

Bitter automobiles have been manufactured in Europe since 1973. However, "without the U.S. market," says Bitter, "a motor-car company cannot do business." Bitter is dividing his time equally between the American and German operations, spending two weeks of each month in the U.S.

Bitter of America bought out previous distributor Dick Fritz. By operating the American distributor organization himself, Bitter believes he can maintain the same control that enabled him to be successful in Europe.

Bitter of America so far has selected 15 dealers for its distribution network, with a nationwide goal of 40 to 50 dealerships. Support for the dealer organization will be provided by East and West Coast regional offices.

The western facility is located in Beverly Hills, Calif. The facility is responsible for warehousing and distribution of Bitter cars and parts west of the Mississippi River, and serves as a model dealership. The Beverly Hills operation is under the direction of Robert Witham, formerly with Volkswagen of America.

The eastern facility, in West Chester, Pa., handles similar operations for the East, and is responsible for the preparation of newly received cars before shipment to dealers. Staff at the eastern facility is headed by John Bylsma, formerly with Ferrari of North America.

Bitter-Automobile GMBH was founded in Schwelm, West Germany in 1971 by Erich Bitter for the sole purpose of building enthusiast cars. Production of the first model, the Bitter CD, began in 1973. Development of the current model, the Bitter SC, began in 1977.

While maintaining full assembly capability at Schwelm, Bitter also uses facilities in Turin, Italy for the complete body works and interior, and in Austria for assembly and painting.

Italian craftsmen, responsible for the interiors of the Maserati and the Pantera, produce the interiors of the Bitter. Bitter Italia in Turin also builds the complete body, as designed by Erich Bitter.

The body and interior are then shipped to Steyr-Daimler-Puch in Austria. There, working with mechanical components provided through a contract with General Motors of Germany, and detail parts from the factory in Schwelm, they provide the rustproofing, full assembly and painting for the completed Bitter automobiles.

Following assembly, the cars are then returned to Schwelm for a final inspection and quality control check.

A high-performance luxury car, the Bitter has a starting price of $43,700, and delivers a top speed of 145 MPH with its 3.9 liter engine.

McDavid signs with Subaru

David McDavid, seated, principal of David McDavid Subaru, Pasadena, Tex., signs a Subaru dealer agreement. Looking on, from left, are: Brett Wolf, McDavid Subaru general manager; Jim Harrell, general manager of Southwest Subaru, Inc., and Jerry Williams, Houston district manager for Southwest Subaru. McDavid has four other franchises—Oldsmobile, Pontiac, GMC and Honda.

Wilbourne gets Toyota deal

Raymond A. Wilbourne, seated center, has purchased the former Ross Toyota dealership in Martinsville, Va. He will operate it as Ray's Toyota, Inc. Also pictured at the signing ceremonies are: Frederick R. Weisman, seated left, president of Mid-Atlantic Toyota Distributors, Inc.; Jack P. Brown, seated right, Mid-Atlantic Toyota general manager; Joseph Burdis Jr., standing left, Mid-Atlantic Toyota vice president-corporate affairs, and Roy W. Valcich, Mid-Atlantic Toyota vice president-sales.

Market share cut in half to 2 pct. in '83

Diesel here to stay despite setback

Continued from Page 1

down 76 percent, Pontiac declined 64 percent and Buick dropped 63 percent. Oldsmobile, GM's diesel volume leader, reported a 56 percent reduction as sales fell from 75,482 units in 1982 to 33,174 last year.

In 1982, General Motors held a full 50 percent of the domestic diesel sales total. But last year, GM found itself with only 32 percent of a diesel market that was nearly halved.

GM's disproportionate downturn has been attributed in part to a problem which cropped up with a V-8 diesel engine built by Oldsmobile and installed in Olds, Cadillac, Chevrolet, Pontiac and Buick models from 1978 through 1981. The alleged engine deficiencies have led to a raft of consumer complaints and lots of bad publicity both for the corporation and diesel engines in general.

Stable gas prices are widely regarded as the primary reason why fuel-efficient diesel engines have declined in popularity. But the narrowing gap between the prices of diesel and gasoline fuel, along with image problems stemming from the troubled Olds V-8 and negative consumer reaction to some diesel characteristics may have also contributed to the sharp drop in sales.

Following the Iran hostage crisis in 1979-80 and the resulting hike in stateside gasoline prices, the diesel took on almost fad-like qualities for American buyers.

"It was kind of like the hula hoop there for awhile," said J. David Hudgens, a GM spokesman. "Buying one was kind of like the patriotic thing to do."

• Just four years ago, the Delphi Study, a semiannual survey of industry executives conducted by the University of Michigan's Office for the Study of Automotive Transportation, suggested that diesels were about to catch on in a big way. Auto company officials who were questioned predicted that 25 percent of the U. S. passenger car market would be held by diesels in 1990.

Over time, those enthusiastic projections have been curtailed, according to Larry Harbeck, an associate research scientist at the University. Delphi respondents have more recently projected the 1990 market for diesels at close to 10 percent.

"The biggest problem for diesels is that gasoline fuel is inexpensive," said Harbeck. "It is not much more than it was in 1967, when adjusted for inflation. Also, diesel and gasoline cost about the same now. Diesel gives you more miles to the gallon, but it is no longer cheaper."

"People were afraid for awhile that they couldn't get fuel," said Hudgens. "Diesels have tremendous range on the highways and the fuel was also cheaper. I think diesel fuel was 90 cents a gallon when regular gas was $1.10 or $1.20, but diesel fuel prices have crept up."

The national headquarters of the American Automobile Assn. (AAA) confirms that diesel fuel has risen to levels comparable to regular and unleaded gasoline. A survey of prices at 6,000 service stations conducted in December showed an average diesel cost of $1.22.2 per gallon, compared with $1.22.1 for regular and $1.28.5 for unleaded.

Harbeck also noted that fuel is not as accesible for drivers of diesel automobiles.

"You can't get it at some stations and you're not welcome at others because they are more interested in large volume sales to truck drivers," he said.

According to a 1982 survey conducted by Hammond Publishing Corp., there are approximately 20,000 diesel fuel outlets in the U. S. The figure represents about 14 percent of the total number of service stations operating across the country.

But besides the price and availability of fuel, diesel car sales have run into other problems, including a declining image among customers.

"Not to mention any names, but a lot of people have had very bad luck with their diesels," said Barbeck. "But the basic characteristics of the diesel contribute to the problem. It's noisy, it smells and sometimes it's hard to start."

"The advantage has been the additional fuel economy you got, and in a lot of people's minds that benefit outweighed the disadvantages," said Cadillac spokesman Gary Josyfowykz. "But as diesel prices have gone up, people seem to be deciding that they'd rather not put up with some of those bad characteristics."

• Others think GM's widely reported problems with the 5.7-liter V-8 has much to do with the sales nosedive in America.

"The failure of that engine has done more to harm the diesel car market than any other factor, including the price of fuel," said Robert Gibbons, president of the Massachusetts-based Diesel Automobile Assn.

"I'm not down on GM. I think their V-6 is a very promising engine, and I think the market is beginning to discriminate between the quick-fix diesels, such as GM's V-8, and what I call the 'real' diesels."

Critics have accused the corporation of hastily converting a V-8 gasoline powerplant to meet a sudden demand for diesels rather than designing a diesel engine from the ground up. The Diesel Automobile Assn. has even suggested that GM drop the diesel name from the GM/Olds engine and instead dub them "compression-ignition engines.

The problems associated with the V-8, which Olds began turning out in late 1977, have spawned numerous organizations and embittered diesel buyers who say they have encountered a laundry list of defects, including faulty crankshafts, failed fuel injection systems, bad filtration mechanisms, blown head gaskets and cracked engine blocks.

There are four major lawsuits and several individual actions currently pending against the corporation.

A national class action suit has been filed in the eastern federal district of New York, a statewide class action is pending in New York and two class actions have been filed in the California state courts.

A Washington state group which started a class action suit is said to have reached a large settlement with GM, but corporation officials have not confirmed the report.

• On March 1, a Chicago-area group known as General Motors Diesel Users Demanding Satisfaction (GM-DUDS) began negotiating case-by-case settlements with the corporation.

GM-DUDS spokesman Buddy Finkelberg said GM offered to begin negotiations and has agreed to reimburse for repair of transmissions, powertrains, diesel components, transportation charges, towing and car rental, incidental expenses and extenuating circumstances expenses.

During negotiations, which Finkelberg predicted will last 3-6 months, GM has reportedly agreed to cover owners with a warranty. He also said the corporation promised that claimants will either receive a loss-of-value cash reimbursement or a tradein, when negotiations are concluded.

"This is only a verbal promise and we've had verbal promises from them before," said Finkelberg. "However, a promise was made."

Attorneys representing the corporation and the consumer group are squaring off in the offices of Kirkland and Ellis, a Chicago law firm retained by General Motors. Finkelberg said there are currently about 1,200 GM-DUDS members, and that his organization is still accepting new members for participation in the claims process.

GM spokesman Hudgens declined to comment on the offer made to GM-DUDS.

"Those are legal negotiations between us and the lawyers for that group," he said. "I wouldn't be at liberty to discuss any details."

Two similar groups are also working out differences with GM. Disgruntled Diesel Owners Group (D-DOG), a Virginia-based organization, recently began an informal settlement mechanism whereby the claims of 6,668 diesel owners will be reviewed on an individual basis.

The D-DOG board of directors agreed last summer to submit, on a trial basis, 24 files to GM under the claims procedure. After reviewing the results, the board voted in early January to go ahead with the program.

"Certainly GM is affording substantial help as far as out of pocket repairs attributable to

Diesel here to stay despite setback

Continued from Page 37

the diesel engine and powertrain," said Mark Steinbeck, an attorney for the group. "But the bone of contention is still loss of resale value."

A third group, the New York-based Lemon-On-Wheels, is weighing a proposal from GM similar to the offer made to GM-DUDS. Meanwhile, the organization is continuing to process claims with the corporation, according to spokesman Peter Lopes, who said more than 350 individual cases have been handled during the past 16 months.

"Our system is lower-keyed, but it has worked out well," said Lopes. "Claims are reviewed by GM and a member of Lemon-On-Wheels. if (an owner) is not satisfied he can go to the Better Business Bureau for arbitration or begin litigation. There is no release signed."

• Last fall, the FTC approved a nationwide arbitration program to settle owner disputes stemming from the V-8 diesel and other GM gasoline engine and transmission problems. Awards by Better Business Bureau arbitrators are binding on the corporation, but not on the car owners.

Lopes said his group has taken GM's concentrated negotiations offer under advisement. But he said the approximately 5,000-member organization will resist any attempt by GM to include a deadline for accepting new members in the program.

"We decided we would continue until all the problems are solved and not capitulate," he said.

General Motors is clearly trying to put the V-8 problems behind it. Hudgens said the corporation has upgraded the quality of its diesel products and even some of GM's critics seem to agree.

For the 1982 model year, the corporation introduced a generally well-received Olds-build, 4.3-liter 6-cylinder diesel which has been installed on rear-wheel-drive G-body cars and front-wheel-drive A-body models.

"I don't have anywhere near the complaints on the 6-cylinder and 6.2-liter V-8 (built by Chevy for use in vans and trucks) that were introduced for the 1982 model year," said Evan Johnson, an attorney with the Center for Auto Safety, a Washington consumer group. "My impresion is that they have improved the engines."

However, Johnson did note that owners of the V-6 seem to be encountering resale problems by taint of association with the V-8.

Few GM spokesmen expect a quick return to market strength for the company's diesels, but the engine does seem to figure in future product plans. The 4.3-liter V-6 will be available on the front-drive C-cars being introduced April 5 — the Olds 98, Buick Electra and Cadillac Fleetwood and DeVille.

"We are convinced there is a core group of diesel buyers, regardless of the availability and cost of fuel," said Oldsmobile spokesman Kari Hulsey. "We plan to stay in the diesel business."

Last fall, Olds general manager Joseph Sanchez projected that diesels would comprise as much as 9 percent of his division's 1984 model-year sales. Hulsey said that figure has since been revised downward, but

VAN DEALERS

IF real profit is your game . . . then you know real profit is what you keep after the vehicle crosses the curb. Short-term profit is often imaginary — you only keep it until something happens that takes it all away.

And profit can go away . . . if the van converter should ignore or be unaware of his responsibility to comply to the Federal Motor Vehicle Safety Standards (FMVSS).

And did you know . . . your dealership is liable if you sell a converted van that does not comply to FMVSS? You are then in the middle between your customer and the government. (And you can't plead ignorance with Uncle Sam.)

Dealerships open as vehicle sales climb in N. J.

TRENTON, N. J.—The marked increase in sales of new cars and trucks in New Jersey last year led to a sharp increase in the number of new-car dealerships in the state, according to Charles Walton, president of the New Jersey Automobile Dealers Assn.

Sales of new cars and trucks in New Jersey, which had reached a record high in 1978 of 506,261, slipped to 488,365 in 1979, and continued dropping, bottoming out at 357,997 in 1982, Walton said.

New Jersey dealerships sold 424,234 new cars and trucks in 1983. That marked an increase of 18.51 percent from the previous year, but the last six months of 1983 showed a 77 percent improvement over the second half of 1982, according to Walton.

The number of new-car dealerships in the state, which fell from 759 just before the sales slump to 619 at the low point in 1982, climbed back to 719 by the end of 1983, Walton said.

The increase of 100 new-car dealerships during 1983 resulted mainly from new dealerships opening at sites where dealers had gone out of business during the recession.

Market share cut in half to 2 pct. in '83

Diesel here to stay despite setback

Continued from Page 38

she pegged the diesel "core group" at 8-10 percent of the domestic market. However, she said the actual diesel share would not approach that figure until all manufacturers produce the engine.

"Some customers are loyal to a certain car company," she said. "Until all companies offer diesel power, we probably won't see (8-10 percent sales)."

Hulsey suggested that Olds may be overcoming the image problems stemming from the V-8. She said the division's most recent market research information shows that, in most cases, customers who have purchased diesels would buy another.

• Josyfowykz, of Cadillac, attributed part of the luxury division's diesel sales reduction to acceptance of its new 4.1-liter V-8 gasoline engine, which he said has been getting "rave reviews."

"There has been an overall decline in diesel sales," said Josyfowykz, whose division saw diesel sales drop from 16,939 in 1982 to 3,984 last year. "But diesel engines will always be around. I don't think they're going to go away."

Ford Motor Co. entered the diesel wars after the 1984 model year began. The company now has a 2.0-liter Toyo-Kogyo-built diesel as an option in the Ford Escort and Tempo and Mercury Lynx and Topaz, and is offering a 2.4-liter BMW-built 6-cylinder turbodiesel for use in the Continental and Mark VII models.

Ford's Raymond Windecker said he did not have a current unit sales count for the company's new diesels. However, he said the installation rate on the subcompact Escort and Lynx models is 7 percent, while Tempo and Topaz installations are running about 3 percent. The Mark VII and Continental turbodiesel options have just recently hit showrooms.

"We're satisfied, we know it's not an enormous market," said Windecker. "We'd like to see the subcompacts get to 10 percent with a little marketing and merchandising, although the compacts probably will not. Small cars and upscale cars seem to attract diesel. The cars in the middle have not been a strong area."

Windecker said Ford believes a sharp run-up in gasoline prices could spur an immediate interest in diesel, but he said the company has longer-term designs on the market.

"Diesel sales will increase over time simply by selling good diesel engines," he said. "And that is not a slur against anyone."

With the decline of GM's diesel sales, the import producers have stepped in to assume a larger share of the U. S. market. But even while Mercedes-Benz pulled into the lead in domestic diesel sales last year, the German manufacturer is de-emphasizing its diesel lines. In recent years, diesel sales have accounted for about 75 percent of Mercedes' volume, but the rate has dropped to about 60 percent for the current model year — in line with company marketing plans — and is expected to fall even lower.

"We anticipated about a 50-50 mix, at least in the medium term," said Mercedes spokesman A. B. Shuman. "Of course, a little hiccup in the Middle East could change that situation in a minute. In the meantime, we want to be balanced."

Shuman said Mercedes' traditional diesel customer has been interested in more than just fuel economy.

"Our surveys show that people like other attributes even more, including simplified maintenance and good driving characteristics. They've found that the longevity and durability translate into high resale."

Shuman said Mercedes has avoided the diesel image problems on the strength of its reputation.

"We've always stressed first that the car is a Mercedes-Benz," he said. "The fact is, the track record of our engines since 1936 stands for something. The engine basically does what people expect it to."

Peugeot spokesman Len Ellis said his company, which claims to have been the first to market diesel passenger cars in 1922, has shifted away from diesels in the current market. The firm is now stocking 80 percent gasoline engines after selling nearly 70 percent diesels in 1982, but Ellis said Peugeot has no plans to let go of its diesel program.

"The company still thinks there is a market for people who drive more than 30,000 to 40,000 miles per year," said Ellis. "Peugeot will keep diesel cars available for that market. In addition, the engine market in this country is pretty volatile. If there is a gas crisis two years from now or eight years from now, there may be another big demand for diesels."

Volkswagen of America, which saw its U. S. diesel installation rate plummet 50 percent in 1983, is not predicting any resurgence in the engine, although it will maintain the option for its successor to the Rabbit line in 1985.

"We do not see the diesel market returning to earlier levels in even the distant future, with the caveat that there is no real change in the Middle East situation or in the supply of oil," said VW's Jay Amestoy. "If gas prices remain the same, I don't think Volkswagen sees any chance that the diesel percentages will increase."

• Although there are few indications that passenger-car diesel sales are in for any short-term revival, some still see it as the engine of the future.

Continued on Page 40, Col. 3

CARB declines to ban sale of diesel cars in California

LOS ANGELES. — An official of the California Air Resources Board told a Southern California air quality district that CARB will not ban the sale of diesel passenger cars in the state, rejecting the district's call to do so.

Concerned about the effects of particulate matter on visibility, the South Coast Air Quality Management District has pushed for regulations that would either ban diesels altogether or require diesel cars to meet the same emission standards as gasoline-powered vehicles.

James Boyd, CARB's executive director, told the AQMD (which can only regulate emissions from stationary sources), that CARB has already adopted the most stringent diesel-car emission standards in the country and that those standards will continue to tighten through the remainder of the decade.

He added that he doesn't see passenger-car diesels, whose sales have decreased dramatically in the past several years, as the major source of the problem. Rather, CARB views heavy-duty trucks and buses as the problem and the board is researching means to deal with the situation.

Fidalgo; Doug Mahin, vice president - distributor division, Subaru of America, and Joe Grecu, operations manager, distributor division, Subaru of America.

Plant in England to produce oil from scrap tires

WOVERHAMPTON, England. —A commercial plant for turning scrap tires into oil is due to begin full production here in March.

The plant is run by Tyrolysis, formed two years ago by Foster Wheeler Power Products and Leigh Interests, a group specializing in waste treatment.

Tyrolysis said it hopes to produce 20,000 tons of light fuel a year and 17,000 tons of coke-like solid fuel.

It will also achieve self-sufficiency in fuel by burning gases emitted during the process, it said.

The tires are broken down into their chemical constituents by pyrolysis, the technique of heating a substance in the absence of air.

"This wash is easy to use and inexpensive," says Ed Wilson of Martin Cadillac.

Wilson, who is director of fixed operations at Martin Cadillac adds, "the CTV-90 is so simple, we use it much more than we expected and it costs so little to operate, we can afford to give washes away."

Market share cut in half to 2 pct. in '83

Diesel here to stay despite setback

Continued from Page 39

"The problem with the GM engine is that it came along at a time when car buyers were being hyped to buy diesels, when perhaps a diesel isn't for everybody," said Gibbons. "You have to be a fairly heavy driver, traveling at least 15,000 miles per year.

"There also needs to be a bit more education on how to operate diesels. People say they are smelly and hard to start in the winter. But they are not hard to start in the winter if operated properly, and the fuel is less noxious than some of the catalytic converter fumes."

Gibbons conceded that the 25 percent market share projected for the diesel just a few short years ago is probably unrealistic, since auto makers are not gearing up for that level of production. But he said the engine may eventually claim a quarter of the domestic market.

"The next 10 years could see it approaching that number as we move to the next generation of technology," Gibbons said. "The diesel engine probably has 20 more years of development to go. There is a lot of room for improvement in fuel economy and performance, and I think it's going to come. We are already seeing more sophisticated turbochargers."

Mercedes' Shuman agrees that the diesel has a long-term future in the U. S.

"I continue to see studies that predict a resurgence of the diesel in the 1990s," he said. Of course, that probably presupposes two things — finite fuel availability and the need to conserve, and improve technology, which means making a diesel more like a gas car in such areas as noise and emissions."

Despite the current sales swoon, the now-vanishing U. S. diesel trend may have left behind a new group of diesel loyalists in this country.

"We've found there are some people who swear by them, especially people who travel," said Hudgens. "There are some real fans out there."

One GM dealership in Maryland is having so much success with diesels that it is advertising to find diesel-equipped editions of 1982 Eldorados, Cutlass Supremes and Chevettes.

"I've had pretty good experience with (new) diesels in our zone," said Jean Rouchard, general sales manager at Westminister Chevrolet-Cadillac-Oldsmobile in Westminster, Md.

"The used ones I've been getting have moved well, and I'm anxious to see how well they sell when I get some more in. It is true I can get them for less than gasoline engines, but that is in part because the diesel usually has more miles on it.

"Sure, there are some complaints about them," he said. "But a lot of people who are buying diesels from me have had diesels before."

OSHA issues rule for servicing of single-piece rims

WASHINGTON. — The National Wheel and Rim Assn. said it is delighted with the "fine standard" the Occupational Safety and Health Administration has issued to cover the servicing of single-piece wheel rims.

NWRA, along with Firestone, first petitioned OSHA for the single-piece rim servicing standard. The new standard, effective March 5, is an amendment to the existing standard for servicing multipiece rims, in effect since January, 1980.

Among the requirements of the new standard is one that employers must supply a restraining device wherever a tire is inflated on a single-piece rim, unless the tire is bolted onto the vehicle.

Such restraining devices must be able to withstand half again the force of a rim separation at the tire's maximum pressure and must prevent any part of the rim from flying outside it if a separation occurs.

Tires must also be deflated by removal of the valve core before dismounting; mounting and dismounting must be done only from the narrow ledge side of the rim, and non-flammable rubber lubricant must be applied to the bead and wheel mating surfaces before assembly.

$5,000 for charity

HARTFORD. — More than $5,000 was reported raised for the American Heart Assn. of Greater Hartford by the Greater Hartford Automobile Dealers Assn. charity preview night at the Connecticut International Auto Show here.

Florida's environmentalists boycott Mercury Cougar

NAPLES, Fla.—Some environmentalists have launched a boycott of the Mercury Cougar in protest of Ford Motor Co.'s proposed construction of a vehicle test track on the edge of the Everglades, where the endangered Florida panther, or cougar, lives.

Environmentalists are distributing bumper stickers and T-shirts that read "Florida Panther—Yes, Ford Cougar—No."

A Ford spokesman said dealers have experienced no impact from the campaign. He added that the proposed test site is west of the officially designated wildlife area.

"We're not kicking Ford Motor Co. out of Collier County. We're saying there's a better place (for the track)," said James McMullen, president of the Endangered Species Research Foundation in Naples, Fla., who is spearheading the boycott.

McMullen said he has tracked one panther for three years and has seen the animal all three times within the proposed construction area.

Ford, meanwhile, must obtain approval from various state regulatory agencies before construction can begin. A hearing before the South Florida water management board is set for March 15. The auto maker also must obtain permits from the state game commission and the Army Corps of Engineers.

The company received the go-ahead from Collier County after Collier Corp., owner of the 530-acre track site threatened the county with a $4.5 million lawsuit. Ford's original zoning request was rejected by county officials. Ford will lease the site from Collier Corp.

• McMullen, nevertheless, remains confident construction will be blocked. He said his campaign gained added ammunition last week when the federal government announced the migrating wood stork had been added to the endangered species list. McMullen said the birds nest in the cyprus trees where the track is to be built.

The test facility will include a 2.5-mile straightaway, a one-mile handling course, a 2.5-mile oval track and about 200 square feet of offices and garages.

The complex, which is estimated to cost between $5 million and $7 million, will be used in the winter when the cold weather prohibits use of test tracks up north.

The track has been scheduled for completion by September, 1984; however, that date has been pushed back.

Partners sign with Pontiac

David S. Arakelian, seated right, and Howard G. Malloy, standing left, signed as partners to run a Pontiac-Buick-GMC dealership in Brattleboro, Vt. Also pictured are R. W. McConnel, seated left, Pontiac zone manager, and W. L. Palmer, Pontiac district manager.

PLANNING A BIG SALE . . . PLACE YOUR AD IN THIS SECTION!

Import total steady, market share dives

Domestic sales up 48 pct. for month

Continued from Page 4

was up 68.37 percent and Lincoln was up 71.84 percent.

With 25 selling days this past February, the domestic daily rate averaged 26,201, up 42.11 percent from 18,437 for each of the 24 days in the month a year earlier.

• Import sales included the usual sprinkling of monthly record sales for European makers. BMW, Jaguar, Mercedes-Benz, Saab and Volvo claimed records. Porsche-Audi said it had its seventh-best-ever month in February. Peugeot was back on its feet reporting its fourth consecutive month with a substantial sales increase. Saab's total was its 23rd consecutive monthly record, it said.

Top importer Toyota reported a sales drop of 4.69 percent. Second-place Nissan was down 23.11 percent. Honda imports were up 14.11 percent. Mazda slipped 11.20 percent and Subaru was up 11.76 percent.

As the imports' share of the total market plunged to 22.14 percent from 29.64 percent a year ago, the remaining five segments shared the scattered wealth.

U. S. subcompacts climbed to 14.85 percent from 11.79 percent. Compacts had 18.24 percent compared with 14.85 percent. Intermediates grew to 26.56 percent from 24.68 percent. Standards slipped to 10.28 percent from 13.87 percent, and luxury models expanded to 7.93 percent from 5.17 percent.

Of the February domestics-only market, 19.07 percent were subcompacts, 23.43 percent were compacts, 34.11 percent were intermediates, 13.20 percent were standards and 10.19 percent were luxury cars.

Where auto market was in February

	Total Sales	Pct. of Total
SUBCOMPACT	124,909	14.85
COMPACT	153,427	18.24
INTERMEDIATE	223,447	26.56
STANDARD	86,478	10.28
LUXURY	66,755	7.93
IMPORT	186,218	22.14
TOTAL	841,234	100.00

Domestic third-period sales were up 42.76 percent, to 248,062 from 173,757. It was highest for the period since 1977 when 249,300 new cars were retailed.

There were eight selling days in the period this year compared with seven in 1983. The daily-selling rate was up 24.92 percent, to 31,008 from 24,822.

GM was up 37.62 percent for the period and claimed 56.21 percent of the market. Ford was up 55.44 percent and had 24.44 percent of the market. Chrysler's gain was 19.10 percent and it had 12.17 percent of the market.

AMC was up 74.34 percent with 3.51 percent of the market. VW was up 34.75 percent and held 1.41 percent of the market. Honda's 5,607 sales accounted for 2.26 percent of the market. No year-ago sales were reported by Honda.

New investigator named in Detroit DeLorean case

DETROIT. — The U. S. Attorney's Office here has appointed a new head for the federal task force investigating the DeLorean Motor Co., AUTOMOTIVE NEWS has learned.

Assistant U. S. Attorney Joseph Papelian has replaced Martin Reisig as head of the federal task force investigating fraud allegations involving the defunct car company.

Reisig, who with fellow AUSA Sheldon Lite had coordinated the task force and grand jury investigation since last year, is leaving the government for private practice. Papelian, described as a "real go-getter," has a good record and has a good reputation in the federal law enforcement community.

The government has accelerated its efforts since the beginning of the year and is now proceeding "regardless of what happens" in John DeLorean's federal drug trafficking trial in Los Angeles, a source close to the investigation said.

The grand jury investigation, which began in mid-1983, has taken a while to reach a full head of steam, but sources now say the grand jury is issuing more subpenas and receiving an increasing flow of documents, including some documents from overseas financial institutions involved in certain suspect transactions.

Papelian and Lite, the task force of federal agents and the grand jury have focused their attention on several transactions, including the mysterious "GPD" transaction in which $17.65 million disappeared from the car project in 1978. Federal statutes of limitation expired last year for a number of alleged crimes.

However, the government is investigating other possible crimes, including tax evasion, racketeering, mail fraud and bankruptcy fraud, for which the statutes have not expired.

Spaulding's suit against GM moves close to courtroom

DETROIT.—The final pre-trial conference of Federal Judge Avern Cohn and attorneys for George G. Spaulding and his former employer, General Motors has been set for March 27.

Spaulding, 64, was general sales manager for Pontiac until June, 1981. His separation from that post and from GM led to his suit in June, 1982, against the company charging a variety of civil wrongs.

They include breach of contract, defamation of character and age discrimination. Spaulding is asking for $69 million in damages.

Judge Cohn will conduct the trial without a jury. The final pre-trial conference has been postponed several times.

Cutting hospital stay to save Chrysler $2 million a year

DETROIT — Chrysler Corp. could save as much as $2 million annually under a new cost containment program designed to reduce unnecessary hospital stays, according to Blue Cross and Blue Shield of Michigan.

Chrysler and its UAW members were the sole participants in a Blue Cross pilot program, which began last summer.

"This new program has provided evidence that Chrysler/UAW members have been unnecessarily admitted to a number of hospitals in the state for lower back pain when no surgery was performed," said Robert H. Reveley, Blue Cross vice president for health care affairs.

"These admissions alone cost Chrysler nearly $700,000 over a recent 12-month period," he added.

Chrysler has said that health care costs amount to $600 of the price of each of its cars.

Reveley said Blue Cross officials are talking to eight to 10 hospitals that showed excesses in hospital admissions and surgical procedures during the pilot program.

The program also indicated that some hospitals were admitting above average numbers of people for one and two days for surgery that could be performed at outpatient centers.

Blue Cross officials hope other large customers, who are charged a $12,000 to $15,000 administrative fee, will participate in the program called ASSURE — A Selective Strategy for Utilization Review Effectiveness. They are presenting the program to other auto makers.

They said companies the size of Chrysler can expect a $2 million savings annually in the first few years of the program.

Honda rust fix cost $17.5 million on 77,776 cars

WASHINGTON — American Honda spent $17.5 million in redress to owners of 1975-78 Honda cars with rusted fenders, under terms of a 1982 FTC consent agreement.

The final compliance report filed with FTC shows that American Honda repaired 65,104 cars, made cash settlements with 568 owners, and reimbursed 12,104 owners for previous repairs. In all, owners of 77,776 vehicles received redress. Some 300,000 vehicles were potentially eligible. FTC staff estimates that consumers received approximately $225 per vehicle, or about one and one-half fenders per car.

American Honda notified 24 "salt-belt" states and the District of Columbia where the rust problem was most prevalent.

Quality ranks ahead of price for suppliers, survey shows

Continued from Page 8

area. This actually improves quality, he said.

Supplier-manufacturer relations and quality will be two of the topics at the auto conference; the third will be industrial policy.

Among the speakers scheduled are Harold Poling, Ford Motor Co. executive vice president, and Shohei Kurihara, Bank of Tokyo and advisor to the Japanese Minister of International Trade and Industry. Michael Driggs, Department of Commerce deputy assistant secretary, has replaced Lionel Olmer, undersecretary for international trade, as a speaker.

Owen Bieber, UAW president, has been replaced on the roster by his administrative assistant, James Lain.

Chrysler Corp. Vice Chairman Gerald Greenwald will be the dinner speaker March 20.

At a workshop the following day, General Motors Vice President Alfred S. Warren and the UAW's Lain are scheduled to discuss the future of quality of worklife programs.

Nissan Vice President of Quality Assurance Shuichi Yoshida, Chrysler Vice President of Quality and Productivity George Butts and GM Director of Reliability Cardy R. Davis will share another workshop session.

Registration information is available by calling (313) 764-1489.

Longtime Ford deal changes hands

Ivor deKirby, center, has sold Pearson Ford in San Diego to J. Barry McCallan, left, and Jess B. Carraway Jr., right. DeKirby had operated the dealership since 1950. McCallan and Carraway have operated Lakewood Ford in Denver for 22 years. DeKirby, long active in civic and charitable activities, was named Mr. San Diego in 1980.

UAW prepares a hard line for this year's negotiations

Continued from Page 1

was outlined in the now infamous GM document.

The UAW resolutions that came out of the convention declare "we are entitled to an immediate wage increase" and the "Annual Improvement Factor (AIF) is needed to provide additional real wage gains reflecting productivity increases." Assemblers at Ford and GM make $12.61 an hour.

The UAW forfeited its annual 3 percent AIF in the 1982 round of bargaining and also deferred some COLA payments. The 1982 negotiations were conducted early at the request of Ford and GM because they said they could not be competitive with that current labor cost. At that time, the auto industry was in a severe economic slump.

The UAW will also ask for improvements in the COLA formula and that some of the current COLA money be folded into the base rates.

In addition, the union will be seeking a reduction in overtime, extensions of the group legal plans (currently in force only at GM), improved health care programs without co-pay and deductibles, increased pensions, paid educational leave and profit sharing on top of AIF and COLA payments.

Improvements in the Guaranteed Income Stream (GIS) will also be sought. The GIS provided laid-off workers with high seniority a portion of their wages until they retire or until the companies find another job for them.

The UAW will also look for more control over Ford and GM's outsourcing procedures. The current contract provides a 24-month moratorium on plant closings related to outsourcing. That expires April 12.

In his speech to the convention, Bieber also called on the auto company executives to take more modest bonuses.

He said increases in the workers' wages and benefits can be accomplished without any price increases, given the current profits of Ford and GM.

"In fact, given the profitability of the firms, we think the industry ought to cut prices," he said. "It would help consumers. It would stimulate sales and production. It would make more jobs."

Creating more jobs is one of the major goals of the drive toward job security, Bieber indicated.

The union is currently faced with a possible loss of jobs as GM imports 300,000 small cars a year from Isuzu and Suzuki as well as Ford's announcement that it intends to build an assembly plant in Mexico.

Bieber said the GM strategy document indicated that "GM wants to be able to source whatever it wants from where ever it wants with no interference from the union."

"Well, I've got news for GM," he said. "We intend to keep those jobs at home in our plants in the U. S. and Canada."

The UAW will once again move toward shorter worktime, without reducing pay. While Bieber was not specific in his speech, it is possible that the union will demand a return to the paid personal holidays (PPH) given up in the 1982 contract. The 1979 agreement provided 26 during its three-year term.

• One small move toward additional time off is the union's demand to make Martin Luther King Jr.'s birthday a paid holiday.

Bieber also said the UAW believes it is entitled to a continued seat on Chrysler's board of directors. The seat is currently held by former UAW President Douglas A. Fraser, who announced he will vacate that seat this spring.

The UAW Collective Bargaining Convention is a meeting of the delegates to decide on strategy. Although there was debate, Bieber ran the meeting with an iron hand, making certain all parliamentary rules were followed.

He was even concerned about press interference. At one point, television crews were not permitted to film the delegates while they were debating because he felt it would be disruptive. Those crews were confined to a small section in a corner of the meeting room away from the mainstream.

At another point, television crews were evicted from a balcony above the delegates because their lights were distracting members.

The UAW maintains that such movements were disruptive to the convention. The television crews say if they can't get the pictures they need they can't cover the story effectively.

During the convention, Bieber made several references to the press indicating that if the UAW was specific about its demands the press would "have a heyday" with what it perceived to be the major issues, leaving other demands out.

Takes first place in February; Fiat leads for 2 months

GM moves to the top in Europe

By Richard Feast
European Editor

LONDON. — General Motors' unflagging pursuit of Ford in Western Europe is starting to achieve results. In February, GM made history by becoming the leading retailer for the first time.

Renault, number one for the past four years, sank to sixth among Europe's Big Six auto makers, while Fiat Auto climbed to overall market leadership for the opening two months of the year.

This motoring musical chairs indicated by early and unofficial returns circulating in the industry is a sharp reminder of the intense competition in the European market.

The leading six makers—Fiat, GM, Ford, Peugeot (PSA), VW Group and Renault in their two-month order—are so evenly balanced that only 2.8 percentage points separate them.

This year is likely to see other monthly market leaders, and no one is yet placing money on a year-end finishing order.

The preliminary February statistics give GM (mainly Opel-Vauxhall but also including U.S. and Isuzu products) 13.4 percent compared with 11 percent one year earlier. In unit terms, the rise in volume was one-third, compared with a total market increase of less than 10 percent to almost 890,000.

Other February positions are Fiat (12.7 percent), Ford (12.0), PSA (11.9), VW (11.5) and Renault (10.6).

• GM's February showing is largely attributable to the enormous gain — 79 percent—by Vauxhall Motors in the UK. Its market share was 22.6 percent, second only to market-leader Ford with a reduced 26.2 percent.

It is another indication that the GM-Ford battle for Europe is being fought in the showrooms of Britain.

January figures give Fiat Auto the leadership with 13.9 percent, followed by Ford (11.99), GM (11.7), Renault (11.4), PSA (11.3) and VW-Audi (11.0). The total market was up by around 5.7 percent to 893,000.

The Fiat position is attributable to its excellent Italian showing in Italy. It had 55 percent of total sales there—or three-quarters of its entire European volume for the month.

Combined January - February figures show Fiat still in the lead with 13.6 percent. The Italian company always reckoned it was market leader, but its definition of Europe never included Spain.

As the fifth largest market in Europe, Spain is always counted by Fiat's rivals, however. Now, even Fiat's competitors acknowledge its leadership.

Other positions after two months were GM with 12.5 percent (10.9 percent for the same period last year), Ford with 12.0 (13.7), PSA with 11.6 (11.5), VW with 11.3 (11.2) and Renault with 10.7 (12.5).

Positions will undoubtedly alter after this month's returns. March is traditionally a good month in the West German market—the biggest in Europe—and with Volkswagen popping new Golfs out of Wolfsburg at a record rate, it could be the turn of the German group.

There were 1,783,000 new registrations in Europe to the end of February, an increase of 7.7 percent over the same period last year. Most auto makers are forecasting a record for the year in the region of 10.5 million.

Of the 16 national markets, most showed volume increases. These were led by West Germany, up 18 percent at 399,000; Italy, up 10.5 percent at 315,000, and the UK, up 5.7 percent at nearly 326,000.

The big volume losses were recorded by France, down 5.6 percent to 280,000, and Spain, down 4.3 percent to 87,000. As market leader in both countries, Renault's current decline is a reflection of those trends.

Truck makers 52 pct. ahead of 1983 output

U.S. truck producers targeted completion of 58,873 units last week, 1.79 percent greater than the previous week's 57,837. The tally led the year-ago week's output of 47,012 by 25.23 percent.

Year-to-date, there have been 594,202 trucks produced, leading the year-ago total of 388,513 by 52.94 percent.

Seven truck facilities worked additional hours last week.

At General Motors, Detroit, Janesville (Wis.), Flint, Lordstown (O.), St. Louis and Pontiac worked Saturday (March 10).

Nissan's Smyrna (Tenn.) facility worked nine-hour daily shifts last week.

Auto production climbs 9 pct.; 172,388 built

U.S. auto makers slated production of 172,388 units last week, 9.75 percent more than the 157,070 completed the previous week and 44.58 percent ahead of the 119,236 built in the year-ago week.

The 1984 production total climbed to 1,625,820 units, up 42.55 percent from 1,140,526 autos built in the comparable period last year.

Breakdown for the week by company was: General Motors, 61.03 percent; Ford Motor Co., 18.19 percent; Chrysler Corp., 15.26 percent; American Motors, 2.78 percent; Honda, 1.38 percent, and Volkswagen of America, 1.36 percent.

Ten auto plants worked additional hours last week.

At GM, Detroit, Fairfax (Kans.), Flint, Framingham (Mass.), Janesville (Wis.), Lansing; Leeds (Mo.); Linden (N. J.), and Lordstown (O.) worked two shifts Saturday (March 10).

Ford's Wayne (Mich.) facility also scheduled Saturday hours.

Canadian makers hit monthly peak in truck output

Canadian truck producers chalked up their highest February output ever by building 70,106 units. The previous February high was 69,626 in 1979. February's output was the best for any month since 70,932 trucks were assembled in June, 1981.

Truck assembly last week was targeted at 16,084 units, up 15.75 percent from the previous week's 13,896 and 55.71 percent greater than 10,329 built in the year-ago week.

Year-to-date, 158,333 trucks have been completed, a strong 73.10 percent improvement over 91,470 built during the same period last year.

Canadian auto makers also boasted impressive statistics for February. The month's production of 90,853 autos was the best for February since 93,463 were built in 1979.

The makers slated production of 21,436 cars last week, 16.24 percent better than the previous week's 18,441 and 32.90 percent greater than the 16,129 completed in the year-ago week.

To date this year, the manufacturers have assembled 207,855 autos, 15.23 percent ahead of the 1983 total of 180,377 at this point.

Chrysler Corp. estimated assembly of 1,970 Dodge Caravans, 1,830 Plymouth Voyagers and 760 Mini Ram Vans at its Windsor (Ont.) plant last week, bringing the year-to-date T-115 total to 39,304.

Holden's new Commodore Calaise

New Holden Calaise is a fully equipped car. Standard equipment includes air conditioning, power steering, central locking, electronic fuel injection, cruise control, trip computer, alloy wheels, 60-series tires, electronic instruments and a top-grade sound system. Story on Page 34.

Traditional franchise system to continue

Porsche changes its mind

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Porsche AG last week abandoned its plan to distribute cars in the U. S. through a channel that included company-run outlets and has opted for a traditional franchise system when it ends its agreement with Volkswagen of America Aug. 31.

According to Peter Schutz, president of Porsche AG, the decision was made "because we felt under the circumstances, we didn't have time to be operational by Sept. 1, which was a very high priority with us."

Schutz, who was reached by phone in West Germany, said all existing Porsche-Audi dealers will be invited to participate in the new setup. However, he said, the company is committed to severing its ties with Volkswagen of America and the independent distributors appointed by VW.

"We feel for our limited number of vehicles," Schutz said, "we don't see a role for a middleman between importer and dealer."

Schutz said dealer reaction and the barrage of lawsuits did not have as much to do with the decision as the lack of enthusiastic dealers willing to go along with the program.

"All this confusion created a climate so that we couldn't get those people committed to the idea on board," he said. "We continue to believe that we violated no laws, but that doesn't stop people from delaying you. We continue to believe that the legal problems are soluble."

However, "in the time available, we couldn't wrestle all the alligators," Schutz said.

• "We needed an enthusiastic organization," John (Jack) Cook, president of Porsche Cars North America, said from Reno. He had returned earlier in the week from West Germany, where the decision to alter the plans was made.

That dealer organization, Cook continued, is "not one where some of them hate us, some of them are just going along with it and others think it's a good idea."

Cook said the U. S. unit of Porsche will still maintain its headquarters in Reno and will name an East Coast distribution point later. Cook said he hopes to inventory some cars at both locations to act as a buffer, but that dealers will be able to stock cars and buy them from Porsche for resale.

"The main difference is that the Porsche Centers will not be built," Cook said. "We will have a regional operation — a wholesale operation. We will have direct relationship with dealerships, not agencies."

Cook admitted that the agency tag did not sit well with dealers.

"That one is my fault," he said. "I wanted to differentiate between dealerships and the new entity."

• Both men, however, were somewhat taken aback by the magnitude of the reaction, not so much by the Porsche-Audi dealers, but by dealers in general, their trade associations and the industry as a whole.

"The reaction I did not expect, and I don't think anyone could have expected, was the almost lockstep panic that set in in the industry," Cook said.

He said he was prepared to discuss Porsche's point of view with dealers in small groups, but "I had no idea that lockstep NADA, AIADA, the Porsche-Audi dealers would all get together, first of all in meetings and secondly, then would say we're going to get this company."

"We obviously not only struck a nerve, but we struck a chord much deeper in the whole retail automotive dealer organization," Cook said.

He said AUTOMOTIVE NEWS, by its headline over the initial story, saying the Porsche action cast a pall over the entire franchise system, added to the difficulty. "The thought had never even crossed my mind.

"We were doing what we thought was right just for us," Cook explained. "Dealers who weren't worried or hadn't thought of it were encouraged to think of it.

• "We didn't start out on a crusade, and I'm not out to fight a crusade, I'm trying to start a business," Cook said. "I wonder why, and I think every dealer in the country should ask himself, and these organizations (NADA, AIADA) should ask

Imported-car inventory moves up to 29 days

By Richard A. Wright
Assistant Managing Editor

The inventory of new imported cars inched upward during February, but it didn't make much difference — shortages were still the rule, particularly among the Japanese nameplates as the current period of voluntary restraints neared its end and shipments lagged behind demand.

In fact, the increase was due in part to lower sales, which resulted from the meager stocks on hand.

New imported cars in dealer inventory and port stockpiles totaled 207,683 March 1, a 29-day supply, compared with 205,337 a month earlier, which was a 26-day supply.

A year ago, there were 316,745 new imported cars in stock, a 41-day supply.

The supply of new imported pickup trucks declined during the month, however, to 62,893 units, a 34-day supply, compared with 78,471 a month earlier, a 45-day stock. A year earlier, there were 93,593 trucks in stock, a hefty 83-day supply.

The combined imported car and truck inventory totaled 270,576, a 30-day supply, compared with 283,808 on Feb. 1, also a 30-day supply. A year ago, the combined inventory was 410,338 on March 1, a 47-day supply.

• The inventory of Japanese-built cars March 1 totaled 113,070 units, a 20-day supply, compared with 124,124 a month earlier, also a 20-day supply.

Japanese nameplates and their March 1 days-supply figures were: Toyota, 9; Mitsubishi, 18; Honda, 19; Mazda, 21; Nissan, 22; Subaru, 27, and Isuzu, 32.

In addition, Chrysler Corp. had a 64-day supply of Mitsubishi-built cars, including Plymouth and Dodge Vista, 25; Dodge Colt, 53; Plymouth Colt, 54; Plymouth Conquest / Sapporo,

breaking news

Olds builds final rear-drive Ninety-Eight

LANSING. — Oldsmobile built its final rear-wheel-drive Ninety-Eight here March 16. It was a metallic blue four-door Regency Brougham and was the 2,297,601st Olds Ninety-Eight built in Lansing. Oldsmobile will retain the car for historical purposes, for parades and display at auto shows. The front-wheel-drive replacement for the Ninety-Eight will be introduced April 5.

After the festivities for the final RWD Ninety-Eight, construction crews began conversion of the Plant 1 complex for the GM-20 cars which will go on sale next fall. The GM-20 cars are the Oldsmobile Calais, Pontiac Grand Am and Buick Somerset Regal.

AMC allowed finance leasing option

WASHINGTON. — American Motors will be allowed to use a finance leasing option for the procurement of auto production equipment beginning this year, although Senate Finance Committee members voted to defer the program for use by most other corporations until 1988. The AMC exemption is part of an overall deficit reduction/revenue raising scheme drafted by the committee.

Chrysler annual meeting in New Orleans

DETROIT.—Chrysler Corp. has decided to hold its annual stockholders meeting at the New Orleans Marriott Hotel Thursday, June 7, at 10 a.m. Central Daylight Savings Time. Chrysler's tie to the city is its major exhibition at the Louisiana World Exposition there this summer.

Japan to increase kit exports, regain crown in '80s

U.S. to reign as output king—briefly

By Kathleen Hamilton
Financial Editor

This will be the year the U. S. regains its title as the world's largest auto producer, but the glory will be short-lived and due in large part to a shift in the Japanese export strategy.

The Japanese won't be in the driver's seat for long as far as profits are concerned, according to the latest Automotive News World Outlook, a quarterly service of Data Resources, Inc., and AUTOMOTIVE NEWS.

Faced with a high Japanese government deficit and easing capital restrictions, both interest rates and the value of the yen will rise in mid-decade, ending the easy overseas profits for Japan's auto makers, predicted John Lawson, London-based auto analyst of DRI Europe.

The Automotive News World Outlook shows only modest gains in Japanese auto production through 1990: In all, an increase of only 15 percent compared with 1983.

Projected growth in Japan's auto exports is larger: 24 percent, to 4.7 million units including kits with more than 50 percent Japanese content.

• But what doesn't show up in the Japanese production totals are the so-called "non-countable" kits — cars with less than 50 percent Japanese content that are assembled in foreign countries.

Production of those kits is expected to more than double, from last year's 790,000 to 1.8 million in 1990.

While they won't show up in Japan's production numbers, they will make a huge impact on U. S. production numbers because the U. S. is where a big

Early-March car sales mark 7th gain in row

By Jenny L. King
Staff Writer

Early-March domestic new-car sales were up 50,000 units over the preceding year and registered the seventh consecutive 10-day improvement of this calendar year.

The most recent total was best for the period since 1979, though it was not outstanding compared with other years as the sales pace generally gains momentum this month as part of the traditional spring selling season.

U. S. auto makers reported sales of 211,240 new passenger cars for March 1-10, up 31.11 percent from 161,117 a year earlier. Back in 1979, sales were 233,332, while the record for the period was set in 1977: 256,926.

With nine selling days both this year and last, the daily rate likewise climbed 31.11 percent, to 23,471 from 17,902.

Year-to-date sales exceeded 1983 by an aggressive 42.44 percent. They numbered 1,449,685 compared with 1,017,736 in 1983.

Volkswagen was the only maker to report a drop in sales for the early-March period. VW's 1,209 total was down 19.13 percent from 1,495 last year. Honda reported sales of 2,620 Accords built at its Ohio plant, up 424.00 percent from an estimated 500 units a year earlier.

• General Motors sales were up 36.62 percent in early March, climbing to 126,808 from 92,816 in 1983. Ford Motor Co. was up 25.46 percent, to 51,006 from 40,656. Chrysler Corp. claimed a 17.60-percent sales gain, to 24,872 from 21,150. American Motors provided a sales estimate of 4,725, up 5.00 percent from 4,500 in 1983.

GM's share of the market grew to 60.03 percent from 57.61 percent. Ford had 24.15 percent, down 25.23 percent. Chrysler dropped to 11.77 percent from 13.13 percent. AMC was off to 2.24 percent from 2.79 percent. Honda claimed 1.24 percent compared with only 0.31 percent in 1983, and VW's share dwindled to 0.57 percent from 0.93 percent.

Buick dealers set a record for the first March period as they gathered sales of 22,811 units. It was also an increase of 20.63 percent from their year-ago total of 18,910 units. Chevrolet reported a sales increase of 84.68 percent, Pontiac was up 61.00 percent, Cadillac was up 7.35 percent and Oldsmobile was up 2.56 percent.

Plymouth sales were up 16.01 percent, Dodge was up 23.29 percent and Chrysler was up 13.84 percent. Ford sales climbed 25.04 percent, Mercury was up 19.11 percent and Lincoln was up 57.56 percent.

At American Motors, AMC sales were off 35.56 percent while Renault sales were up 18.52 percent based on the AUTOMOTIVE NEWS estimate of AMC and Renault figures for early March.

Alfa unveils Arna TI hatchback

New Arna TI has been introduced by Alfa Romeo. The three-door hatchback is powered by a flat, four-cylinder engine of 1,351 cc developing 86 HP. The TI has comprehensive instrumentation, including a tachometer.

173 potential candidates fill out questionnaires

DeLorean's juror selection begins

By Matt DeLorenzo
Los Angeles Reporter

LOS ANGELES. — Jury selection in the drug trafficking case against John Z. DeLorean began in earnest last week with the individual questioning of potential jurors by defense and prosecution attorneys.

The process is expected to take about two weeks.

A pool of 173 potential candidates, who filled out questionnaires to determine how much pre-trial publicity they had been exposed to, has been impaneled and will be questioned in groups and individually to find a 12-member jury.

DeLorean, who was in court to listen to the proceedings and plead innocent to the superceding indictment against him, spoke for the first time to reporters outside the courtroom here.

He called the FBI case against him "a pure frame-up and FBI cheap shot."

DeLorean said it was hard to believe he was in this situation "with the contributions I've made to minorities and blacks and everyone else," a hint that the government action against him is similar to the experiences of other well-known figures such as Dr. Martin Lutner King and the late actress Jean Seberg, who both at one time or another came under FBI surveillance.

DeLorean said the government action threatens to take him away from his family.

"This is a very nerve-racking, awesome experience," he said.

Questioning of the prospective jurors began slowly, with Howard Weitzman, the former auto maker's attorney, grilling the candidates, identified by number only, extensively on their knowledge of events surrounding the case and exactly what they learned of DeLorean's arrest through the media.

Two panels of 16 jurors each were brought into the courtroom of U. S. District Judge Robert M. Takasugi, however, less than half were questioned in the first day. After each candidate was questioned, the judge and attorneys would confer briefly on the juror's suitability.

During the second phase of selection, both sides will be given pre-emptory challenges, that is, they will be allowed to remove prospective jurors without cause. The defense has been given 15 such challenges, the prosecution, 9.

When Lead Prosecutor James P. Walsh Jr., was asked if the conferences between the judge and attorneys on each juror was standard operating procedure, Walsh replied, "Nothing in this case is SOP."

Seminar dates set for Traverse City

ANN ARBOR, Mich. — Management Briefing Seminars, sponsored by the University of Michigan, will be held next August at the Grand Traverse Resort in Traverse City, Mich.

Dates and topics are: Aug. 9-10—Robotics and factory automation; Aug. 9-10—Occupational health and safety; Aug. 9-10—Planned innovation; Aug. 13-15—The ever-changing international automotive industry — evolution and revolution, and Aug. 16-17—Quality assurance.

Computer age for ads here, Edsel Ford says

By Aziz Shihab
Staff Correspondent

DALLAS. — Edsel B. Ford II plans to use flashy and computer-age techniques to advertise his company's products.

Ford, advertising manager for Ford Division, said the company will spend "more than last year" to sing the praises of Ford vehicles, emphasizing quality and advanced technology.

He declined to reveal the exact amount of the advertising dollars to be spent in 1984, but said, "We'll spend enough" to reach consumers.

"We'll have a heavy mix of TV and print media advertising," he said, "and since we haven't as yet fully exercised radio (advertising), we're leaning in that direction."

Ford said home computer systems will also be used to carry the company's message. "We'll use the Telextext," he said, "you know, the computer which consumers are using at home to do their shopping. I think computers are the coming thing for advertising."

Ford was here to officiate at a champagne introduction of the new "Fila" Thunderbird, launching a joint promotion of Ford, Neiman-Marcus and Fila Corp. of Italy.

A national promotion campaign is planned, featuring Fila Sportswear in Neiman - Marcus stores nationwide and a tie-in to a national ad campaign by Ford.

• In an interview, Ford said his goal is to attract "young, professional, affluent drivers of foreign cars" to his company's vehicles. He said the T-bird, Escort GT and Tempo are some of the cars which would convert those consumers to Ford.

"Of course, we have an owner base and it's the company's priority to keep the owner base we now have," he said.

"Our second goal is to attract new people. That's why we are pursuing what we call contemporary marketing."

Ford said women, blacks and

Carroll to head Maryland dealers

BALTIMORE. — Joseph P. Carroll has been appointed executive vice president of the Automobile Trade Assn. of Maryland

Joseph P. Carroll

Carroll is a former Maryland assistant attorney general and has been serving as a vice president of the dealer group for the past eight years.

Carroll succeeds John J. Powell who retired Feb. 29.

Service Index soars; gain biggest in 5 years

By Francis J. Gawronski
Service Editor

The nation's new-car dealers opened 1984 in spectacular style by recording their biggest gain in service and parts business in five years and the seventh highest increase in the 23-year history of the Automotive News Service Index.

In January, according to the Service Index, dealers' service and parts volume amounted to 118.5 percent of the business recorded in the same month the year before. In January, 1983, shop business was up 9.5 percent.

January's increase was the best since January, 1979, when combined service and parts business was up 21.1 percent over the same month the year before.

January also marked the 10th consecutive month in which dealers' shop business has shown an increase over the comparable year-earlier figure.

In January, all five indicators used in the Service Index registered excellent gains, with sales of all parts and accessories leading the way, up 26.7 percent over the year-earlier figure.

Shop parts sales (those used on both customer-paid and warranty work) were up 22.4 percent, while gross profit on all labor, parts and accessories sold in the service department — the most important barometer from the dealer's viewpoint — was up 18.9 percent over the previous year's figure.

Total labor sales (both customer-paid and warranty) were up 13.8 percent, while repair orders written increased 8.2 percent over the number written during the same month in 1983.

Figures used in the Service Index are averages compiled from reports on shop business from a cross-section of the nation's new-car dealerships.

SERVICE INDEX
118.5*

	Jan., '84 vs. Jan., '83
Gross Profit on All Labor and P&A Sales	+18.9%
Repair Orders Written	+ 8.2%
Total Labor Sales (Customer & Warranty)	+13.8%
Shop Parts Sales (Customer & Warranty)	+22.4%
Sales of All P&A	+26.7%

*—Survey by Automotive News shows that dealers' service and parts business im January, 1984, was 118.5 percent of business in January, 1983.

Cost to customer can be competitive, dealers say

Leasing to individuals is growing

By Joseph Bohn

"Direct," "personal-use," or "retail-car" leasing is on the upswing and is the fastest-growing segment of the leasing business, according to Detroit auto firms.

Aside from its long-term outlook, retail leasing, as some dealers refer to it, is expected to become sharply more attractive to customers this year if interest rates climb.

That's because lease financing rates are easier to control than are retail sale rates, say the financial arms of the auto companies.

Generally speaking, younger married or young, upwardly mobile people, with good incomes and credit ratings, who either don't have a downpayment or don't want to tie up a lot of cash, are prime candidates for this type of lease.

The direct lease programs offer them use of a new car without a downpayment and on monthly terms that can be lower than retail purchases. They also avoid having to dispose of the car after the normal 48-month period.

The auto companies don't claim it's cheaper to lease than buy. They generally regard such leases as another form of merchandising or an alternative financing arrangement.

But some dealers claim that costs to the customer can be very competitive.

• One dealer gave the illustration that a customer could buy a car with $1,000 down and have payments of $260 a month for 48 months. Or he can lease a car with nothing down, with payments of $210 a month and no equity.

If the customer buying a car paid $50 a month more to build equity, he would have paid in another $2,400 plus $1,000 up front — and there's the possibility the car might not be worth $3,400 after 48 months.

Usually, though, dealers and companies are big beneficiaries of the programs.

Leases under Ford Motor Credit's "Red Carpet" program jumped from 20,000 in 1981 to 69,000 in 1983. Ford wrote 35,000 leases in the first two months of this year, and Clifford R. Damaska, retail lease manager at Ford Credit, is looking for a good spurt this year.

Although Ford's numbers include all types of leases under its "Red Carpet" program, personal use leases are the big driving force in the overall numbers increase, Damaska said.

GMAC's leases are on the upswing in 1984 after dropping last year because the company failed to adjust its lease financing rates fast enough to account for the swift drop in retail sales financing rates, said Keith Krutcher, GMAC director of dealer relations.

In 1982, GMAC wrote 42,000 personal-use leases out of a total of 140,000 leases it handled that year. Direct lease rates generally ran 9.9 percent to 10.9 percent compared with 16 to 17 percent for retail purchase rates, which made monthly base payments a lot more attractive to car shoppers.

In 1983, GMAC's direct lease dropped to 25,000 out of a total of 102,000 leases it wrote that year because retail purchase rates crept close to lease rates.

GMAC is now offering 9.9 percent financing on direct leases compared with 11-11½ percent financing generally available for retail purchases. It expects the number of direct leases to climb by about 15 percent into the 30,000-35,000 range.

• Krutcher added that if interest rates rise this year, GMAC will have a much easier time holding the line on its lease rates than on retail rates because of the investment tax credit and depreciation it factors into its pricing on lease rates.

Chrysler Financial revamped its "Gold Key" lease program last year to become more competitive with Ford and GM. In nine months of 1983, it wrote 4,000 individual (as opposed to fleet) leases, but in the first two months of 1984, it wrote 5,000.

"You can see what's happen-

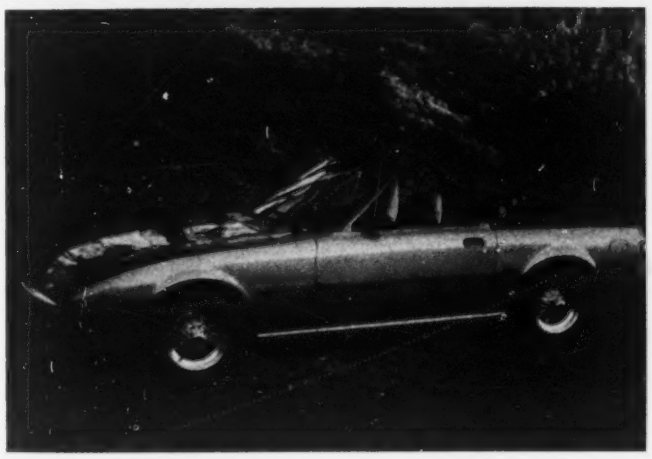
Star of the show

The star of the 1984 Tarrant County Auto Show in Fort Worth was a 5½-foot, 225-pound robot named Oscar Oldsmobile. His appearance at the show was sponsored by David Ryan Oldsmobile, Meador Oldsmobile and Don Davis Oldsmobile. With Oscar is Johnny Dwire, general manager of Ryan Oldsmobile.



Sunnier Mazda

Convertible Specialists, Gardena, Calif., plans to build 150 of its new Mazda RX-7 convertible conversions this year. Top is electrically powered and rear seat folds down.

Ford's Pestillo not upset by UAW's contract demands

By Marjorie Sorge
Labor Editor

Ford Motor Co.'s chief negotiator is not upset by the demands the UAW intends to put on the bargaining table this summer.

"There is time to solve our differences," said Peter J. Pestillo, labor relations vice president. "I am not troubled by what was said vis-a-vis collective bargaining at this point."

Earlier this month, the UAW's Collective Bargaining Convention said job security would be the number one demand when bargaining begins this summer.

Next in line are a reduction in overtime, adoption of a group legal plan (currently in force only at General Motors), improved health care programs without co-pays and deductibles, paid educational leave and profit sharing on top of annual wage increases and cost-of-living adjustments (COLA).

Stephen P. Yokich, UAW vice president and head of the Ford department, said he was pleased with the outcome of the convention.

One of the big issues at that convention was a GM plan disclosed in a company document last month. The document said GM wanted to substitute profit sharing for both the annual raises and COLA.

Pestillo refused to say if Ford hopes to follow that pattern or if the company will give workers profit sharing in addition to annual wage improvements.

Two years ago, after Ford and the UAW negotiated profit sharing, Paul J. Ryder, Ford's director of hourly benefit planning, said profit sharing is a better way of linking workers to profitability than automatic wage increases such as the 3 percent annual improvement factor normally negotiated.

Like workers at GM, those at Ford gave up AIF increases in the 1982 negotiations.

Pestillo also said Ford's $1.87 billion profit for 1983 is not as much as it seems when compared with Ford's investment needs for new products. He said the UAW has "got to deal with that."

Total is 8.9 million; domestics up 17 pct., imports rise 8 pct.

1983 new-car registrations highest since 1979

By Jenny L. King
Staff Writer

New-car registrations in the U. S. in calendar year 1983 were best for any year since 1979, according to figures compiled by R. L. Polk & Co. December's total of 909,660 beat out every other month in the past four years with the highest sum since July of 1979.

Last year, 8,924,186 new passenger cars, including domestics and imports, were registered in the U. S. That represented a 15.09-percent increase over the 7,754,342 in 1982 and a 1.69-percent jump from 8,443,919 in 1981. Registrations in 1980 totaled 8,760,937. In 1979, they numbered 10,356,695.

Domestic registrations in 1983 reached 6,466,829, up 17.88 percent from 5,485,711 a year earlier. Two years ago, they totaled 6,012,239.

Import registrations of 2,457,357 in 1983 were up 8.32 percent from 2,268,631 in 1982. Their share of the market dropped 1.72 percentage points in the interim, to 27.54 percent from 29.26 percent.

For the year, three of the six major marketplace holders were up, three were down in shares. Besides the imports, GM slipped, though not so far. General Motors' 44.01-percent share of the total market in 1983 was down only 0.01 percentage points from 44.02 percent in 1982.

Miscellaneous domestics, once largely the province of Checker, which no longer builds cars, all but dropped from the picture in '83. They were down to 0.01 percent of the total from 0.03 percent.

American Motors gained 0.74 percentage points in '83, rising to 2.14 percent from 1.40 percent. Ford Motor Co. was up 0.43 percentage points, to 17.11 percent from 16.68 percent, and Chrysler Corp. gained 0.58 percentage points, stopping at 9.19 percent compared with 8.61 percent a year earlier.

In the domestics-only area, GM claimed 60.74 percent in 1983, down from 62.22 percent in 1982. Ford had 23.61 percent, up slightly from 23.58 percent. Chrysler grew to 12.69 percent from 12.17 percent. AMC added nearly a full percentage point,

3 Ford recalls involve 5,400 cars and trucks

DEARBORN. — Three recalls involving nearly 5,400 vehicles were announced by Ford Motor Co.

Involved are 2,924 1984-model Broncos with V-8 engines, 1,954 1984-model Econoline Vans and Club Wagons and 489 1984-model Thunderbirds, LTDs, Cougars and Marquis.

The Broncos are being recalled for inspection of a clamp on the fuel hose. Some of the clamps may not be securely fastened and the line could disconnect in a front-end collision, presenting a risk of fuel spillage and fire, Ford said.

The Econoline and Club Wagon recall involves vehicles with 16.5x6.75-inch single rear wheels. Some of the wheels could have substandard welds, Ford said.

The passenger cars are being recalled because incorrect thermactor air-control valves may have been installed.

This tractor is not in tow

This tractor isn't being towed, it's a demonstration unit called the "Yo-Yo." According to the Detroit Diesel Allison Division, it shows the advantages of automatic transmissions built by the division. The truck climbs steel cables attached to the drive wheels and can be held at any angle, DDA said, showing precision control using only throttle pressure.

DDA road show stars diesels, transmissions

INDIANAPOLIS. — Detroit Diesel Allison Division is taking a product show on the road—12 vehicles powered by Detroit Diesel engines and Allison automatic transmissions. They will travel 13,000 miles and visit 17 cities in the U. S. and Canada.

The Product Demonstration Caravan, a spokesman said, will show the features, advantages and benefits of DDA equipment to key truck and bus users, original-equipment manufacturers dealers and distributor personnel at each stop.

The program got under way in February at the GM Proving Grounds in Mesa, Ariz., with a "ride-and-drive" demonstration for DDA customers, predominantly OEMs.

The Arizona program included meetings at which buyers could learn about new technology features such as electronic controls and output retarders.

After the Arizona demonstration, the caravan rolled eastward to begin a three-month journey which will take it to cities in all six DDA national sales regions and Canada.

"This is the first time in recent years that DDA has taken Detroit Diesel engines and Allison automatics to the customers in the regions for a ride-and-drive demonstration," said Tom Winter, DDA transmission sales.

The caravan includes several different combinations of Detroit Diesels and Allison automatics so the potential customer can test drive the application that best fits his needs, he added.

Guests at each location are given information on the total engine and transmission line offered by DDA, including the performance capabilities and economic value associated with each. "Potential customers then can drive the vehicles so they may compare the performance with their current equipment," said Winter. "Many distributors have plans to conduct open houses of their facilities in conjunction with the caravan demonstration."

The caravan moved through the southern U. S., up the East coast to Philadelphia and Toronto late in February and early in March.

From there it is traveling west through the Great Lakes region, the Midwest region, back into central Canada and on to Vancouver, B. C. The last leg of the trip takes the caravan down the Pacific coast to Portland, Ore., and finally into Los Angeles.

Ford appoints Kahn HD marketing manager

Jeffrey Kahn has been appointed heavy-truck marketing manager of Ford Truck Operations. He replaces **Robert E. Guina,** who has retired after 27 years with Ford Motor Co.

Jeffrey Kahn

Kahn, who had been manager of Ford Parts & Service Division's Truck Service Engineering Department since 1977, will be responsible for all Ford heavy-truck marketing, sales promotion and advertising. He joined Ford in 1964 as a product design engineer in Ford Division's Truck Product Engineering Office.

Fruehauf's Hulverson heads product planning

Adrian F. Hulverson, a 24-year veteran with Fruehauf Corp.'s Fruehauf Division, has been appointed to the newly created position of product-planning vice president.

Hulverson, previously engineering vice president, joined Fruehauf in 1960 as chief engineer for advance design.

truck industry news

Increases recorded in all three market segments

'83 registrations up 22 pct. over '82

Registrations of new trucks of all types in the U. S. last year increased sharply over the previous year, with gains in all three market segments for the first time since 1979.

During the year, according to R. L. Polk & Co. statistics, there were 2,976,556 new-truck registrations, a gain of 22.5 percent over the year-earlier 2,430,471.

The December total was up 34.9 percent to 331,870 units, compared with 246,093 in the final month of 1983.

As usual, no registrations are available for Oklahoma, but Polk noted that the 1983 figures include November-December New York totals compiled from manufacturers' sales records.

After a one-year absence, Ford again was No. 1 in new-truck registrations in 1983, leading runnerup Chevrolet by almost 38,000 units. Ford also topped Chevrolet in retail truck sales in 1983.

Light-truck tallies last year totaled 2,799,636 units and accounted for 94.1 percent of the industry total. The count was 24 percent higher than the previous year's 2,257,335 light trucks.

• Medium trucks were up 5.1 percent last year to 47,482 units, compared with 45,194 in 1982. Heavy trucks began to rally late in the summer and finished the year 1.2 percent higher than the previous year, 129,438 units versus 127,942.

Registrations were higher in 1983 in all three light-truck weight classifications, in two of the three medium groups and one of the two heavy-truck categories.

Last year there were 1,572,277 Group 1 tallies, an increase of 23.1 percent of the previous year's 1,277,374 units. About a million of the Group 1 registrations in 1983 were compact trucks.

The biggest percentage gain in 1983 was achieved by Group 2 vehicles. There were 1,205,417 tallies during the year, an in-

GVW table, Page 60.

crease of 25.5 percent over the previous year's 960,469.

Group 3 registrations continue to grow, and the 1983 total of 21,942 units was 12.6 percent higher than the year-earlier 19,492. The steady rise in big motor-home sales is a major reason for the surge in Group 3 tallies.

Group 4 also is making an impressive comeback. In 1983, there were 360 registrations, compared with only 13 the previous year.

Group 5 was the big percent-

Continued on Page 58, Col. 5

HD registrations in '83 hit 129,438, highest in 4 years

A surge in new heavy-truck registrations in the last four months of the year enabled the 1983 total to top the year-earlier count for the first time in four years.

During the year, according to R. L. Polk & Co. statistics, 129,438 new Groups 7 and 8 trucks were registered in the U. S., an increase of 1.2 percent over the previous year's 127,942 units.

The heavy-truck count hit an alltime high of 213,174 units in 1979.

Last year's Group 8 registrations climbed to 80,012 units, a gain of 9.2 percent over the 73,285 tallied in 1982. The Group 7 count, however, was down 9.6 percent to 49,426 units, compared with the year-earlier 54,657.

International regained the No. 1 spot in the heavy-truck registrations from Ford with a total of 30,824 units, 17.4 percent higher than runnerup Ford's 26,255.

International's tallies accounted for 23.81 percent of the in-

International recalls 1,100 heavy '83 trucks

CHICAGO. — International Harvester's Truck Group has announced the voluntary recall of approximately 1,100 Paystar and Transtar model heavy trucks built from July through December, 1983, at its Canadian plant in Chatham, Ont.

The recall involves the possible omission of a cotter pin used to secure the hinge pin of the floor-mounted brake pedal. Potential result of this omission could mean separation of the brake-pedal assembly. The company said, however, that no such occurrences have been reported.

Truck calendar

March 21-24—National Truck Equipment Assn., 20th annual Convention and Supershow II, Baltimore Convention Center, Baltimore.

March 22-24 — 13th annual Mid-America Trucking Show, Kentucky Fair & Exposition Center, Louisville.

April 7-10 — American Truck Dealers, 21st annual convention/exposition, Hyatt Regency Hotel, Phoenix, Ariz.

April 25-27 — International Trucking Show, Anaheim Convention Center, Anaheim, Calif.

May 18-23 — Truck Trailer Manufacturers Assn. annual convention, Palm Beach, Fla.

May 23-25 — New England Truck Show, Hynes Auditorium, Boston.

Aug. 7-12—30th annual Midwest RV Show, Notre Dame University campus, South Bend.

Sept. 30-Sept. 3—Truck '84, American Trucking Assns. convention and exposition, Las Vegas Hilton/Las Vegas Convention Center, Las Vegas.

Oct. 13-18 — Recreation Vehicle Dealers Assn., annual convention, Sheraton World, Orlando, Fla.

Nov. 27-30 — 22nd annual show, Recreation Vehicle Industry Assn., Kentucky Fair & Exposition Center, Louisville.

Dec. 3-6—SAE annual truck and bus meeting, Hyatt Regency Hotel, Dearborn.

service management

43 years of service

Wilfred Seguin, second from right, who retired from Cliff Anscheutz Chevrolet-Oldsmobile-Datsun, Inc., Alpena, Mich., after 43 years as a parts manager, was honored at a retirement party. Seguin accepts a plaque from Harley Guite, right, GM Parts Detroit zone manager, while Brad Brunken, GM Parts district manager, left, and Cliff Anschuetz, dealer, look on.

Walker sues Kar Crest over parts labeling system

RACINE, Wis. — Walker Mfg. Co. has filed a lawsuit in the U. S. District Court for the Northern District of Illinois, charging the Kar Crest Division of J. M. Tull Industries, Norcross, Ga., with unfair competition, trademark infringement and false representation.

Walker, a manufacturer of automotive exhaust system parts, is part of Tenneco Automotive, a division of Tenneco, Inc.

Gordon Kay, president, J. M. Tull Industries, said the suit "has been referred to our attorneys and we are waiting for their interpretation. It seems to be a routine suit filed against one of our subsidiaries."

The complaint alleges that since 1971 Walker has used a distinctive five-digit part numbering system for labeling mufflers, pipes and accessories; that Walker has promoted its part numbering system by advertising, and that the system has become identified with Walker.

The complaint charges that Kar Crest has adopted Walker's part numbering system for use in the advertising and sale of exhaust pipes manufactured by Kar Crest in order to benefit from Walker's goodwill, in a manner likely to cause confusion that Kar Crest's exhaust pipes are legitimately connected with Walker.

In addition, Walker charges Kar Crest with trademark infringement by using the Walker name and trademark on price sheets relating to Kar Crest pipes.

Finally, Walker charges that

FWD flaws not excessive, fleet repair survey finds

By Francis J. Gawronski
Service Editor

For the most part, front-wheel-drive cars are not presenting fleet managers with excessive maintenance and repair problems, but those who do encounter abnormal difficulties cite the drivetrain as the most common and the GM X-bodies as the most troublesome models.

These are the results of a recent survey of U. S. and Canadian executives responsible for fleets conducted by Runzheimer Reports on Transportation, Northbrook, Ill.

According to Runzheimer, survey results, based on responses of 402 fleet managers representing 265,000 cars, showed that 70 percent of the fleet managers have not encountered "other than normal maintenance" of front-wheel-drive cars, while 30 percent said various front-wheel-drive cars present repair problems.

Fleet managers who noted abnormal maintenance and repair requirements cited, in order of frequency, drivetrain, suspension, engine, steering and general problems as the most troublesome. (See accompanying table.)

In the drivetrain category, fleet managers cited transmission problems, 50 percent; transaxle, 22 percent; camshaft, clutch and transmission seals, 2 percent each, and loose torque converter, 1 percent.

Under suspension, they cited front-suspension system and constant velocity (CV) joints, 10 percent each; excessive tire wear, 7 percent; alignment, 4 percent; shocks and struts, 3 percent each, and excessive front-end vibration, 2 percent.

Abnormal Maintenance or Difficulty With FWD Fleet Cars*

Certifying counterpersons

In a move designed to "recognize professional competency of parts counterpeople in the areas important to the successful conducting of business at the parts counter," the Automotive Wholesalers Assn. Executives (AWAE) has established a national program to certify auto parts counter men and women.

Other objectives of the program, announced at the recent 25th annual convention of the Automotive Service Industry Assn. in Chicago, include an "effort to foster professional development of the counterperson and to assist in raising the overall image of the counter sales person."

Testing for the certification will be under the administration of each of the state wholesaler associations and they will select times and sites for testing to be done in their states, according to Loyal Hellweg, AWAE president, who announced the new program at the ASIA convention.

Hellweg, who also is executive director of the Iowa Automotive Wholesalers Assn., said the tests, consisting of 150 questions, are being written and validated by Northwood Institute, Midland, Mich., a co-sponsor of the program. College credit will be given for successfully completing the certifying test.

The test is designed to verify the counterperson's knowledge in such areas as one-on-one selling, catalog use, vehicle systems, handling the do-it-yourself customer, automotive terms and other administrative and sales subjects.

In addition to the test score, Hellweg said years of experience on the counter as well as other training programs will add points to an individual's score.

The certified counterman, Hellweg told the meeting, will receive uniform patches of the logo, a certificate, a lapel pin and an identification card.

"I think it's important for counterman certification to be administered on a local level," Hellweg said. "That way, the grass roots support needed for

Replacement glass sales expected to set record in 1984

Bright future for windshield market

PHOENIX. — Sales of windshield replacement glass in the U. S. are expected to set an all-time record in 1984, according to Robert S. Terrell, sales and marketing manager, Glass Division, Ford Motor Co.

Speaking to the Flat Glass Marketing Assn. here, Terrell predicted that industry sales of windshield replacement glass would top 5.7 million units this year — an increase of 6 percent, or 300,000 units over 1983 sales and 100,000 units better than the previous record of 5.6 million units set in 1979.

He said stable fuel prices and an increase in motor-vehicle travel were two reasons behind the growing demand for automotive replacement glass.

"We expect gasoline prices to rise by only 7 to 8 percent in 1984, compared with increases of 35 percent in 1979, 39 percent in 1980 and 12 percent in 1981," Terrell said.

"Although Americans drove fewer miles in 1979 and 1980 than they did in previous years, we have a modest growth in miles driven in each of the past three years."

• Terrell said American motorists are expected to drive nearly 1.65 trillion miles this year, up 2 percent from 1983 and an increase of nearly 140 million miles from 1980's total of 1.51 trillion.

He added that a general recovery in the automotive industry, the increasing popularity of trucks and severe 1983-84 weather conditions were other factors pushing glass sales toward record levels in 1984.

"The disaster years of 1980, 1981 and 1982 for vehicle sales greatly inhibited our replacement business," Terrell said. "Solid vehicle sales growth in 1983 and 1984, however, will give us a much bigger universe

Motorcraft promo car hits the street

Les Pomeroy, left, president of Quality Auto Body, Inc., Fairfax, Va., presents the keys of the Motorcraft Thunderbird to Paul Lansingh, Washington district manager for Ford Parts and Service Division. The car will be used in the promotion of Motorcraft and Ford-branded parts at store openings and selected motorsports events in Virginia, Maryland and the District of Columbia.

Fleet-car service life is 29 months

Mileage averages 56,135 before replacement

By Francis J. Gawronski

The average service life of a fleet car tops 29 months and is driven slightly more than 56,000 miles, according to the 1983 Used-Car Marketing Survey conducted by the National Assn. of Fleet Administrators (NAFA).

NAFA said survey results also confirm the "belief that leased cars are kept in service a few months less, driven fewer miles than company-owned vehicles in U. S. commercial fleets."

According to NAFA, 257 association members responsible for fleets totaling 166,409 cars participated in the survey. The responses, NAFA said, were divided into four fleet segments —U. S. commercial, public utility, government and Canadian.

Among the 178 U. S. commercial fleets, with 105,254 cars, the average car is kept in service 29.6 months and driven 56,135 miles before being replaced.

In 1983, according to NAFA, these fleets sold 34.8 percent of their vehicles. Of this total, 32 percent were 1980 model-year cars or older; 44 percent were 1981 models; 20 percent were 1982 models, and 4 percent were 1983 models.

NAFA said a further analysis of this segment indicates that leased cars are kept in service an average of 28.4 months and driven 56,668 miles, while company owned cars are kept 30.5 months and driven 58,039 miles.

Although sales to employes continues to be the most popular method of disposing of used cars — 30 percent of all used cars—NAFA said the survey indicates that wholesalers and auto auctions are increasing their penetration of the fleet market.

In 1983, NAFA said, wholesaling and auctioning were up 29 percent and 27 percent, respectively, of all sales.

Five percent of the used cars were sold to used-car dealers; 8 percent were traded to new-car dealers (more by leased fleets than by company owned fleets); and 1 percent were sold as wrecks or as salvage, according to NAFA.

NAFA said company owned fleets sell a higher percentage of their used cars to employes than do leased fleets — 37 percent as compared with 24 percent.

The public utility group — 22 respondents with 32,758 vehicles (28,958 company owned, 3,800 leased) — has the distinction of keeping its cars longer and driving them further than any other group in the survey. NAFA said the average service life of utility cars is 71.2 months and 88,684 miles, while the government group of 27 fleets and 23,079 cars (22,679 agency owned and 400 leased) kept its cars for an average of 52.4 months and 79,066 miles.

Among the 30 Canadian fleets with 5,327 vehicles, the average service life was 28.8 months and 87,000 kilometers (53,939 miles).

Utility fleets sold only 4,305 cars in 1983, 13 percent of their total stock.

Of the cars that were sold, 94 percent were 1980 or older models; 5 percent were 1981 models; 1 percent were 1982 models, and less than one-half of 1 percent were 1983 models.

Seventy-four percent of the used cars were sold through auction; 13 percent were sold to employes; 8 percent to wholesalers; 2 percent to used-car dealers, and 3 percent were traded to new-car dealers.

The government fleets sold 6,408 vehicles in 1983, approximately 28 percent of the total stock.

Of the vehicles sold during the year, 87 percent were 1980 or earlier model cars; 8 percent were 1981 models; 2 percent were 1982 models and three percent were 1983 models.

Ninety-eight percent of government cars are sold through the auction. In a majority of the cases, the marketing is done through public auction required by statute, rather than through a wholesale auction.

Only 1 percent of government used cars were sold to employes, and 1 percent were sold to used-car dealers.

NAFA said survey results make it "difficult to define a trend in future vehicle cycling policies."

Twenty-six U. S. commercial fleets said they plan to change their cycle in 1984, with 14 indicating they would lengthen it (either months or mileage) and 12 said they were shortening the cycle life.

Four public utility fleets said they plan to change their replacement cycle in 1984. In each case the new cycle will be shorter.

Six government fleets reported that they plan to change their replacement cycle in 1984, with five moving to a longer cycle and one shortening its from 84 months-60,000 miles to 60 months-80,000 miles.

Eight Canadian fleets indicated they plan to change their replacement cycles in 1984. Six are increasing either the months in service or miles driven, while two will shorten the cycle.

In 1983, the 30 Canadian fleets operating 5,237 cars (1,339 company owned, 3,988 leased) sold 1,975 cars, approximately 37 percent of total stock.

Twenty-eight percent of the vehicles sold were 1980 models or older; 51 percent were 1981 models; 20 percent were 1982 models, and one percent were 1983 or current year models.

*Many government agencies reported that they sold their cars through public auction rather than through a wholesale auto auction or they disposed of them through another agency such as a General Service Agency.

Supercharge for UK fleets

'It is a flexible cost-control tool'

HUNT VALLEY, Md. — PHH Group, Inc., the Baltimore-based corporate services company, announced that its international subsidiary, PHH, Ltd., of Swindon, England, has entered into an agreement with the British Petroleum Co. (BP) to operate and administer the largest fuel card system in Great Britain.

Called Supercharge, the card is for use by UK companies that operate fleets of 20 or more vehicles. The BP and National gasoline stations will honor the card, as will stations that use the PHH AllStar Fuel Card.

Supercharge, which does not compete with BP's agency card —this is for fleets of commercial vehicles—will be accepted at twice as many UK filling stations as any other fuel card.

• Frank J. Schmieder, executive vice president of PHH Group said, "We are excited about this arrangement with British Petroleum. It marks a new stage of PHH's activities overseas. This expansion of our services to European business is in keeping with the growth we have experienced domestically over the past several years.

"Last year in the U. S. we saw a movement towards cash purchase of fuel. In the UK the reverse has been true," Schmieder said. "With the Supercharge card we have created a massive network of over 7,000 gasoline stations and garages that honor this card. That is one in every three stations in the United Kingdom.

"Over 30 percent of the fuel purchased at UK filling stations goes into company owned automobiles, that represents a potential volume of over 1.5 billion gallons of fuel," he said. "We're enthusiastic that the Supercharge card will earn a major share of this market because it provides significant customer benefits.

"The Supercharge card was designed to respond to the unique needs of the UK marketplace and to provide company management with a detailed summary of transaction reports that are vital to maintaining high levels of operating efficiency," Schmieder said. "It is a flexible cost control tool that isolates fuel costs from running costs and creates a single value-added tax invoice to deal with."

PHH International offers fleet management, fuel purchase and leasing services for cars and trucks, as well as relocation management services throughout the United Kingdom.

PHH Group and its subsidiary companies provide a broad range of cost control management services including vehicle and business aircraft fleet management and leasing, location assistance for corporations, relocation assistance for their transferred personnel and various expense management programs.

History is made—quietly

UK Undersecretary of State for Industry John Butcher silently eases a Bedford CF Electric off the line at Luton. With him, standing, is John T. Battenberg III, general manager, Bedford Commercial Vehicles.

Daimler-Benz short on CAFE

WASHINGTON. — Daimler-Benz is projecting its CAFE for '84 models at 26.5 MPG, just missing the '84 fuel-economy standard of 27 MPG.

But Daimler noted that in model year '81, its CAFE was 25.6 MPG—well above the 22.0 MPG standard—and its earned credits worth $9,744,122 will easily offset its 1984 expected need of about $1.9 million.

Seminars cover key issues for fleet operators

BALTIMORE. — The key issues that will affect fleet operators during the 1985 model year will be covered in a series of seminars sponsored by Peterson, Howell & Heather, Inc.

Called Fleet Management Perspective 1985, the series will open April 19 in Baltimore at the Marriott's Hunt Valley Inn and end May 9 in Houston at the Westin Galleria.

Other seminars will be held April 24, Parsipanny-Troy Hills, N. J., Parsipanny Hilton; April 25, New York, Plaza Hotel; April 26, Danbury, Conn., Ethan Allen Inn; April 27, Bedford, Mass., Stouffer's Bedford Glen.

Also, April 30, San Francisco, Hyatt Regency - San Francisco; May 1, Los Angeles, Los Angeles, Marriott Hotel; May 2, Schaumburg, Ill., Hyatt Regency Woodfield.

Also May 3, Pittsburgh, Allegheny Club; May 4, Cincinnati, Clarion Hotel - Cincinnati; and May 8, Atlanta, The Waverly.

Matching leasees to the right car

ATLANTA. — Town and Country Leasing has come up with a new leasing promotion with the opening of its Sandy Springs, Ga. office.

The policy, according to Fred Amtower, director of operations, is to focus on matching leasees to the right car. The prospective customer is given a questionnaire and is consulted via an "advice conference."

The goal is to find the car that best suits the customer's needs, Amtower said.

"We then give them a choice after we've made a selection presentation from every car available," he said.

Reimbursement

Continued from Page E-6

lows its use by "others" living in the same household.

Eighteen fleets in the group have established a minimum business mileage as one consideration in assignment of fleet cars. Three fleets set the requirement at 20,000 miles a year. Three each set it at 14,000, 15,000 and 18,000 miles a year.

Fourteen fleets in the chemical and petroleum group report that some form of compensation or ability to purchase the car was fleet policy when an employe loses eligibility for a company car. In one case, the employe is allowed to keep the car. One fleet gives a "one time salary adjustment." and one fleet reported its policy was an increase in salary but it was lost if the employee was ever assigned a car again.

In the drug and cosmetics group, every one of the 45 responding fleets permit personal use of company cars after working hours, on weekends and holidays, and for vacation travel. Three fleets place some limitations on the extent of personal use, generally in regard to the length of vacation trips.

Forty-two of the 45 fleets charge for personal use; three do not. Of 42 fleets that charge, 17 base it on mileage; 18 have a flat weekly or monthly rate, and six use a combination of both.

Every fleet in the group permits the employe's spouse to use the car; 27 extend the privilege to licensed children, and seven permit others in the household to use it.

In reporting on criteria for car assignment, the majority of fleets in this group said job title was the key factor, but a substantial number included the amount of business mileage driven as another factor.

When reimbursing employes for use of personal cars, every respondent in the group relies on a straight mileage payment.

Thirty-one fleets in the drug and cosmetics group provides some form of compensation or offered to sell the fleet car to an employe who no longer qualifies for a company car.

In the manufacturing-consumer group, of 53 responding fleets, all but one permit personal use of company cars. One fleet does not permit the car to be used on vacation, while six others place some limitation on personal use.

Forty-seven of the fleets permitting personal use charge for such use, either on a straight mileage basis, flat weekly or monthly charge or a combination of both.

Five fleets in this group limit personal use of the company car to the employe only. All others permit the spouse to drive the vehicle, and 30 fleets extend personal use privileges to licensed children, and seven permit the car to be used by "others" in the same household.

The question of criteria for assignment of company cars invariably draws more than one response. The majority of fleets always mention "job title" but a large percentage also mention business mileage driven.

Twenty-one fleets in the group reported they compensated employes, either in the form of cash payments or sale of the car, if he or she was no longer eligible for a company car.

In the food beverage group, all 27 fleets permit personal use of the company car and all but three charge employes for personal use. Eight fleets each charge straight mileage, a flat weekly or monthly charge or a combination of both.

Every fleet permits the employe's spouse to drive the car, while 18 extend the privilege to licensed children and five fleets allow others in the household to use it.

Twelve fleets in the group said mileage is a factor in assignment of cars, while 22 said job title or duties is a factor. Only three said fringe benefits are a consideration in car assignment.

Fifteen fleets said an employe who no longer rates a company car receives cash compensation or is given the opportunity to purchase the vehicle. Three fleets said they pay the employe $4,000 less taxes; one pays two months salary up to $6,000 maximum. One fleet said an employe with 15 years of service is given the car.

Front-drive cuts costs

Averages $100 less than RWD for three years

NORTHBROOK, Ill. — Total annual cost to own and operate a 1984 front-wheel-drive car is $100 less on average, than a comparable 1984 rear-wheel-drive car.

This is the highlight of cost analysis of 12 selected front and rear-wheel-drive cars by Runzheimer Reports on Transportation.

The cars were evaluated by the firm's data analysts on the basis of variable costs, such as gasoline, oil, maintenance and tires, and fixed costs, including licensing, depreciation, financing, taxes and insurance.

The costs, Runzheimer said, are based on a three-year, 60,000-mile tradein cycle.

The front-wheel-drive compact Plymouth Reliant, for example, costs $1,530 in variable costs each year and $2,725 in fixed costs, totaling $4,255 annually. The comparable rear-wheel-drive Ford Mustang L, with variable costs of $1,610 and fixed costs of $2,875, according to Runzheimer, costs a total of $4,585, making the difference $230 a year (see accompanying table).

The average variable costs for all rear-wheel-drive cars amounted to $1,717, while fixed costs were to $3,363 for a total average of $5,080, compared with front-wheel-drive variable costs of $1,630 and fixed costs of $3,348 for a total of $4,980 and a difference of $100.

For four selected intermediate cars, the total cost difference is $140.

In the luxury-car category, the front-wheel-drive Cadillac Eldorado costs $7,834 annually, making it $122 less to own than the rear-wheel-drive Lincoln Continental at $7,956, according to Runzheimer.

In the sports specialty category the front-wheel-drive Chrysler Laser costs $4,705 annually, making it $233 less to own than the Chevrolet Camaro at $4,938, the firm said.

The slight cost advantage of front-wheel-drive cars over the rear-wheel-drive cars, according to Runzheimer, is primarily due to engineering changes resulting in weight reduction which helps achieve greater fuel efficiency.

The exception to the lower yearly costs for front-wheel-drive cars is the subcompact category. The Ford Escort L costs $121 more annually at $3,979, than the rear-wheel-drive Chevrolet Chevette costing $3,858.

The Runzheimer newsletter editors point out that cost difference should not be the only factor in choosing between front and rear-wheel-drive cars. Variables such as ride comfort, cargo capicity, traction, car handling and repair costs should also be considered.

Cost of car ownership goes down

Second time in history, says Hertz study

By Francis J. Gawronski

Average expenses for owning and operating a new car in the U.S. dipped in 1983, for only the second time in history, to 43.28 cents per mile, down 1.4 cents or 3.1 percent from 44.67 cents in 1982, according to annual automotive cost estimates released by Hertz Corp.

The ownership and operating costs, according to Hertz, are for typically equipped new compact-sized U.S. cars.

The 1983 decline, which the New York based lease-rental company attributes to lower interest rates and reduced gasoline prices, is said to end a decade of double-digit increases that boosted auto operating expenditures 174 percent between 1972 and 1982.

According to Hertz, the only previous decline in the more than half-century that it has kept records was during the price-control era of 1971, when costs to run new intermediate-sized sedans, then the most typical new cars, declined from 19.0 cents a mile to 18.7 cents.

By comparison, Hertz noted, the nation's overall cost of living climbed 129 percent in the 1972-1982 decade.

The drop in total costs came despite a 3.2 percent hike in prices to $8,358 for a typically equipped 1983 compact from $8,102 in 1982, Hertz said. This rise boosted vehicle depreciation some 4/10ths of a cent per mile in typical driving.

Insurance, licenses, fees, taxes, maintenance and repair expenses also increased fractionally last year, adding another 3/10ths of a cent a mile. But interest costs fell 2 cents, while gasoline and other service station charges were another 1/10th cent lower, the Hertz study revealed.

(A comparison of the Hertz 1983, 1982 and 1978 estimates for typically equipped, new compact-sized domestic sedans driven 10,000 miles yearly for five years appears in an accompanying table.)

"The 1983 drop in ownership and operating expenses for most new models is welcome news to owners of the nation's 120 million passenger cars," Frank A. Olson, Hertz chairman and chief executive officer, said. "After reducing their business and personal travel substantially in recent years, Americans seem to be back on the road again.

"Our figures indicate it is more than a coincidence that automotive sales began to turn up last year, just as driving expenses began turning down," Olson said. "Continued pricing restraint by manufacturers should benefit American motorists, and the auto industry itself."

According to the Hertz report, car prices are a key factor in overall driving outlays, bearing on depreciation, interest, insurance and taxes—the "fixed" or standing annual expenses which comprise some three-quarters of total auto costs.

The Hertz data showed that over the past 10 years the trend has been to driving less, keeping cars longer and purchasing smaller vehicles with fewer options, in an attempt to keep driving outlays in line with income.

Since 1972, average yearly car mileage has dropped 22 percent to 8,037 miles; compact cars, rather than intermediates, are now the most typical new models purchased; new cars are now kept an average of 5.1 years against 3.6 years; and, the average age of cars in use is 7.2 years today, compared with 5.7 years in 1972.

Automotive expenses differ significantly by vehicle size and optional equipment, annual mileage, duration of ownership and where autos are driven, Hertz said.

Cars purchased used and new units kept for longer periods cost substantially less, the report indicated.

(The new Hertz cost estimates for 1983, 1982 and 1978 for new models of different sizes driven 10,000 miles a year for five years are shown in the above table.)

Figures in the study also revealed that keeping cars longer can save: New 1983 compacts driven 10,000 miles a year but traded annually cost 50.47 cents a mile, 7.2 cents more than those kept a more typical five years; units retained 10 years averaged 33.29 cents a mile, 10.5 cents less than five-year ownership, and nearly 17.2 cents under cost for annual trading, Hertz said.

The Hertz report also stressed that variations in annual driving distances also have a material effect on the cents-per-mile costs because annual fixed dollar outlays are divided by more, or fewer miles.

For the five-year driver, a new 1983 compact's costs ranged from 73.91 cents a mile at 5,000 miles a year to 28.35 cents as an annual 20,000 miles of driving — 45.6 cents a mile less, Hertz said.

However, on an annual dollar basis, Hertz noted, 50,000 miles a year totals $3,696, while 20,000 miles comes to $5,670, or $1,974 more. The average driving distance for U.S. cars in their first five years of service was 9,507 miles in 1982.

Gillis named president of ACRA

'H.R. 1415 is bad legislation . . . ill conceived'

PALM SPRINGS, Calif. — Richard J. Gillis has been elected as the sixth president of the American Car Rental Assn. (ACRA) during the association's annual convention here.

Gillis is the president and chief executive officer of Americar Rental and Leasing System of Washington and surrounding metropolitan area. He is also the president of Americar Corp., the franchisor of Americar Rental and Leasing System nationwide, and owns and operates Sterling Ford, a Ford dealership in Sterling, Va.

During the 1984 convention, Gillis stressed his commitment to educating the industry and the consumer on the consequences of H.R. 1415, a bill currently pending in the U.S. House of Representatives, which seeks to prohibit incentives offered by automobile manufacturers for volume or fleet purchases of automobiles.

"H.R. 1415," Gillis said, "is bad legislation. It is ill-conceived, clearly anticompetitive and harmful to manufacturers, new car dealers, fleet purchasers and ultimately the general public."

In December, 1983, Gillis testified against H.R. 1415 before the House Energy and Commerce's Subcommittee on Commerce, Transportation and Tourism.

In addition to electing Gillis as president, the ACRA also elected the following officers: Senior vice president - Rajiv Tandon, corporate vice president & general manager, Car Rental Division, National Car Rental System, Inc., Minneapolis; vice president of legal and legislative affairs - Robert L. Aprati, vice president & general counsel/secretary, Budget Rent A Car Corp., Chicago; vice president of programs - Robert E. Pirtle, president, ai Rent A Car Corp., Dallas; vice president of membership - John P. Kennedy, vice president, Rent A Car Operations, Avis, Inc., Garden City, N. Y.; secretary - C. Kenneth Wright, chairman, Rent A Car Co., Inc., bda/Avis Rent A Car, Richmond, Va.; treasurer - Roger A. Murch, Director of Government Relations, National Car Rental System, Inc., Minneapolis.

Elected as directors for a three-year term expiring in 1987 were: Charles A. Bovino, vice president - operations support, Avis; Bill Plamondon, vice president - operations, Budget Rent A Car; James D. Pratt, Director, Thrifty Rent A Car System, Inc., Dallas, Tandon; Richard C. White, vice president, Mr. Rent-A-Car/Mr. Lease-A-Car, Andover, Mass.; and Joe W. Wimberly, president, Tri-City Rentals, Inc., dba/Hertz Rent A Car, Kingsport, Tenn.

Directors whose terms expire in 1985 are: Larry R. Depace, vice president, Central Leasing Co., dba/National Car Rental, Cleveland; Richard J. Gillis, president, Corporate Fleet Management, Inc., dba/Americar Rental System, Alexandria, Va.; Robert W. Klyce, president, Car and Truck Rentals, Inc., dba/Avis Rent A Car, Birmingham, Ala., Pirtle; Elliott Weinstein, vice president of Fleet, Grand Rent A Car Corp., dba/Avis Rent A Car Licensee, Marina del Rey, Calif.; Thomas J. Zarcone, corporate vice president, Car Rental Division, National Car Rental System, Inc., Minneapolis.

Directors whose terms expire in 1986 are: Aprati; H. F. Boubelik, corporation vice president - sales, National Car Rental System, Inc., Minneapolis; Ken Elder, president, Welcome Corp., dba/Thrifty Rent A Car, Alexandria, Va.; Richard Haiman, president, Budget Rent A Car of Florida, Orlando, Fla.; Kennedy; Les E. Netterstrom, II, president, Holiday - Payless Rent A Car System, St. Petersburg, Fla.

Hole-in-one winner receives car

It seemed like Christmas in July for Marty Dickerson, a member of the Ladies Professional Golf Assn. tour from Middletown, O. By sinking a hole-in-one at the McDonald's Kids Classic benefit golf tournament in Philadelphia, Dickerson won a Cutlass Ciera Brougham, donated by National Car Rental in Philadelphia, and a full-length mink coat.

Case for 27-month replacement cycle

'Potential savings of $10 per car, per month'

Peterson, Howell & Heather, Inc., fleet lessor of cars, trucks and equipment, has changed its replacement policy recommendations, effective this month.

For several years, PH&H has recommended a 36-month or 55,000-mile replacement cycle for its clients' cars, with some special usage exceptions. Based on recent changes in the economy and the automotive industry, however, the fleet leasing and management company is now convinced that, for most fleets, replacement timing must be accelerated to less than 30 months, with an optimum point of 27 months in most cases, to capture maximum savings.

Assumptions underlying the change concern the sensitivity of resale prices to months in service versus mileage. Based on examination of used car sales and return on original cost over the past 10 months, PH&H has determined that months in service is now the most important variable to consider.

A number of recent changes in the fleet management environment have led to this re-evaluation.

The drop in interest rates presents opportunities to capture lower rates than those applicable to older leased units, a source of potentially large savings in financing costs, the company says.

A stronger resale market also prevails, in terms of percent return on original cost, and is placing a higher premium on newer used cars.

'The numbers speak for themselves,' says PH&H president Eugene Arbaugh.

Regulations permitting more flexible use of investment tax credits present the opportunity for earlier and greater ITC cash flow with accelerated fleet turnover, according to the company.

Lower maintenance and tire costs, enhanced by warranty coverage on newer cars, and the continuing improvement in fuel economy in newer cars, also are said to contribute to overall savings through accelerated replacement.

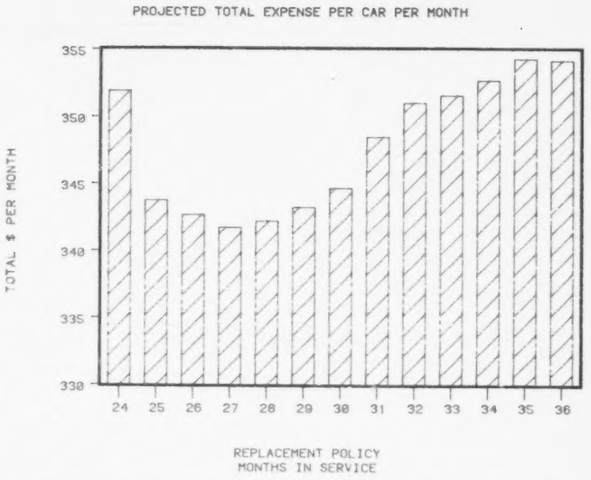
With the original cost of automobiles relatively stable, PH&H believes all these elements combine to offer important total fleet savings through a targeted, shortened replacement cycle.

For the typical fleet car, traveling an average 2,200 miles per month, the window between 25 and 27 months appears to be the replacement threshold to target for maximum savings, so that all replacements can be completed within a 30-month cycle, the company says.

PH&H president Eugene A. Arbaugh emphasizes the changing nature of the replacement policy decision. "The information we have provides strong evidence that a replacement policy of 27 months is the optimum for the large majority of our clients.

"We have modeled many scenarios, and they all have indicated the same thing. The numbers speak for themselves. Clients still operating under a 36-month policy should seriously consider taking advantage of this opportunity for accelerated replacement. We are convinced there are potential savings of five to 10 dollars per car, per month, which represents millions of dollars of savings over our entire fleet."

A letter announcing results of the computer modeling was recently mailed to PH&H clients. More information will be available at the company's annual client seminars to be held in 12 cities across the country in April and May.



PH&H says 27 months is the optimum time for fleet replacement.

Call me a 'manager'

And pay me $35,227 a year

NORTHBROOK, Ill. — More than twice as many of those responsible for fleet management classify themselves as managers rather than administrators, according to a recent survey by Runzheimer Reports on transportation.

According to the industry newsletter, 41 percent of the respondents are ranked as managers, while 19 percent are titled administrators.

Other corporate ranks, according to the survey of 489 executives responsible for fleets, include vice president, 11 percent; director, 10 percent; supervisor, 7 percent; and president, 2 percent.

Examining compensation, according to title (see table), the survey notes that six out of 10 respondents in the $60,000-and-up category are presidents or vice presidents.

Those with the titles of president and vice president usually have other duties in addition to fleet management, which represents a part-time responsibility, according to the newsletter.

However, once the upper levels are excluded, the survey reveals that compensation for fleet managers reaches higher levels with greater statistical frequency than for fleet administrators, Runzheimer said.

The survey also revealed that the median compensation for fleet managers ($35,227) is $8,852 higher than for fleet administrators ($26,375).

Compensation for fleet supervisors falls most often into the $20,001 to $35,000 range, while that of directors is somewhat scattered, but with the response in the $40,001 to $45,000 range.

Based on the survey results, and recognizing that the title of "manager" obviously carries more weight than "administrator," the editors of the Runzheimer newsletter recommended that the National Assn. of Fleet Administrators change its name to National Assn. of Fleet Managers and work for achieving the designation of fleet manager for all fleet professionals.

CAPITAL EXPENDITURES AND LEASE FINANCING OF SELECTED TYPES OF EQUIPMENT, 1982
(Amounts in Billions of Dollars)

Category	Capital Expenditures	Lease Financing — Amount	Lease Financing — Percent of Capital Expenditures
Computers	34.0	5.0	14.7
Railroads—Class I	2.0	0.7	35.0
Motor Vehicles	30.1	9.3	30.9
Aircraft[1]	40.1	1.8	45.0
Shipping[2]	3.1	0.7	22.6
Agricultural Equipment[3]	13.3	0.7	5.3

1/ Capital leases plus tax benefit transfers.
2/ Capital expenditures consist of the value of newly produced non-military vessels.
3/ Farm gross capital expenditures ($12.6 billion) plus new leases of equipment ($0.7 billion), 1981.

Leasing as financial tool

It's a means of lowering cost of capital

STAMFORD, Conn. — The leasing of capital equipment in the motor vehicle industry has expanded so rapidly in recent years that it now represents one of the most important sources of financing for the acquisition of capital equipment.

According to a new report on lease financing by Andrew Brimmer, a former member of the Federal Reserve Board, the leasing of capital equipment in the auto industry accounted for 31 percent or $9.3 million of the capital expenditures in 1982.

The report, commissioned by the General Electric Credit Corp. (GECC), explains the current strategies behind the growing use of leasing as a financial tool.

Many companies unable to take advantage of the tax benefits associated with the purchase of new equipment look to leasing as a means of lowering their cost of capital, the report said.

Leasing companies like GECC can apply incentives such as accelerated depreciation and investment tax credits, often charging depreciation and investment tax credits, often charging rates below what the company would pay if purchasing the equipment outright.

The study points out that companies in the motor vehicle industry enjoy the further advantage of improving their cash flow by avoiding the high cost of tying up their cash in equipment purchases.

"This money could be put to better uses, such as working capital, research and development, or acquiring short-term financial assets," explained Gary Wendt, GECC vice president.

"What's more, compared with bank loans, leasing typically requires a smaller down payment and fewer restrictions," he said. "Plus many lease arrangements included maintenance and repair services."

Wendt also noted that leasing also makes a major contribution to the motor vehicle industry by creating jobs. Outlays on new plants and equipment stimulated the demand for capital goods plus a variety of related products and services.

"As output rises to meet these demands, labor requirements increase and new jobs are created," Wendt said.

"Leasing has helped to expand the availability of funds and to reduce the cost of credit to many segments of the railroad industry," Wendt said.

"Many companies would otherwise find it impossible to obtain the equipment and facilities needed to expand the supply of goods and services so critical to the growth of the motor vehicle industry," he said.

Educational courses available

NEW YORK. — The National Assn. of Fleet Administrators, Inc. (NAFA), has released its 1984 Educational Catalogue providing information on courses that meet the educational and training needs of fleet managers, according to Marilyn Leach, chairperson of NAFA's national education committee, and equipment administrator, Dowell Division, Dow Chemical.

The 16-page booklet includes an in-depth description of the three courses NAFA is offering in 1984. They are Basic Principles of Fleet Management, Advanced Fleet Management, and Automotive Familiarization.

"Attending a NAFA conference or seminar provides fleet managers with an excellent opportunity to share ideas and discuss new concepts in the field with their fellow professionals," says Leach.

The catalogue contains a registration and housing form for those interested in attending any of the three courses. It is available by writing to NAFA, 295 Madison Ave., New York, New York 10017 or by calling (212) 689-3200.

Dates and locations for the courses are May 8-10, Detroit, Basic Principles of Fleet Management; July 11, 12, Chicago, Advanced Fleet Management; September 10-14, Chicago, Automotive Familiarization; October 17-19, Vancouver, B.C., Basic Principles of Fleet Management; November 5-9, Montreal, Automotive Familiarization, and November 14, 15 Houston, Advanced Fleet Management.

Are supplier jobs at stake?

Studies can't quantify Foreign Trade Zones

By Geoff Sundstrom
Washington Reporter

WASHINGTON. — It is not possible to quantify the employment effects Foreign Trade Zones and Subzones are having on the Commerce Department's Foreign Trade Zone (FTZ) program.

The release of the General Accounting Office (GAO) study follows an earlier International Trade Commission report on FTZs. The ITC report also found net employment information difficult to ascertain.

Both studies were prepared at the request of the chairman of the House Ways and Means Committee, Dan Rostenkowski, Illinois Democrat. Rostenkowski was said to be concerned that the FTZ was encouraging imports, while eliminating American supplier jobs.

The GAO report said the auto industry had encountered "little or no opposition" as the largest user of subzones and that "the automotive parts industry and the UAW have not voiced opposition to date because they believe that the subzones are helping them and that general purpose zone operations do not affect them."

The study also said, "Affected parties told us that the benefits of continued operation of final assembly plants and the continued purchase of many U. S.-made components offset the negative impact of reduced employment related to a small percent of components."

However, GAO's findings tend to contradict UAW testimony before the ITC. The UAW told the ITC it is difficult to oppose Foreign Trade Subzone creation on a site-by-site basis, since the national union would often find itself at odds with individual locals.

Nevertheless, the union said it believed the FTZs are taking more jobs out of the American economy than they are preserving and the union looked to both the ITC and GAO to determine whether this was so.

The AFL-CIO advocated total elimination of the FTZ program in those same hearings, and the ITC's study uncovered opposition to auto maker subzones by the U. S. iron and steel industries.

The GAO found that the effect of FTZ, on local economies is "mixed" and that "it is uncertain whether, and to what extent, Foreign Trade Zones contribute to a net addition to total U. S. employment, even if local employment is increased by increasing exports or by reducing imports."

The auto industry told GAO it "would still import parts if zones did not exist but added costs would render them less competitive."

The industry said "changing economic conditions plus foreign and domestic competition" led to a greater need for imported auto parts and that subzones had made it economically feasible to increase imported components and raw materials."

K J appoints Achilles

MC PHERSON, Kans. — Kansas Jack, Inc., has appointed Mike Achilles national Sales coordinator, a new position for the collision repair equipment manufacturer.

ponents Operations, has been named Engineer of the Year, Rockell International Corp.'s highest honor for engineering achievement.

The company said Basas was cited "for distinguished contribution in the development of a unique approach for generation of software that can automatically create finite element models."

Mack's Meacock named product egineering chief

Mack Trucks, Inc., has announced the promotion of **Leslie A. Meacock II** from chief-engineer - vehicle development to product-engineering director. He succeeds **John B. Mastin,** who has retired after more than 35 years in heavy-truck engineering.

Meacock, who has been with Mack since 1965, will be responsible for all Mack product engineering activities, including powertrain components.

2 Autocar sales chiefs named by Volvo White

Appointment of two national sales manager for Autocar trucks has been announced by Volvo White Truck Corp.

Donald W. White, who had been district sales manager in the Northeast region, will coordinate all Autocar sales activities in the East (Northeastern and Southeastern regions.

William A. Bruss, who had been Southwest regional sales manager, will have similar responsibilities for Autocar in the West (Southwestern, Midwestern and Western regions).

Weinhardt will direct Bendix braking programs

W. John Weinhardt has been appointed worldwide program director of Bendix antiskid and electronic braking programs for the Allied Automotive Sector, which includes Bendix, Fram, Autolite and Prestolite operating units.

For the last three years, Weinhardt has been group director of business strategy for Bendix medium and heavy-truck products. He joined Bendix in 1973.

Ford names Clissold light-truck sales head

Jack G. Clissold has been named Ford Division light-truck sales manager.

He formerly was general marketing manager in Ford of Canada's Central Office in Oakville, Ont.

He joined Ford in May, 1962, and was named marketing plans manager for the Central Office in 1968. After serving in regional marketing posts, he served as manager of the Pacific and Great Lakes (Burlington) regions prior to being named Central Office general marketing manager.

December dip offsets October-November gains, AAA says

Auto travel steady in 4th quarter

WASHINGTON. — U. S. auto travel showed moderate gains during October and November of 1983, but declined in December, according to the American Automobile Assn.'s fourth quarter Triptik survey.

Compared with the same months a year earlier, auto travel rose 3.3 percent in both October and November. A 6.9 percent decline registered in December resulted in an overall increase of 0.1 percent for the entire fourth quarter.

The decrease recorded in December was due largely to adverse weather conditions in most regions of the country.

For all of 1983, auto travel remained virtually unchanged from the previous year.

AAA's survey is based on a tabulation of the number of Triptiks requested by members of AAA-affiliated clubs.

Triptiks are individually prepared routings made up of detailed strip maps adapted to fit each member's travel needs. AAA clubs issued 5.6 million Triptiks in 1983, with 900,000 issued in the fourth quarter.

On a regional basis, increases during the fourth quarter were recorded in the Southeast, 6.8 percent; the West, 3.6 percent; the Southwest, 3.0 percent, and the Midwest, 1.4 percent.

Regions of the country showing decreases were the Great Lakes, 1.6 percent; the Mid-Atlantic, 1.9 percent, and New England, 2.9 percent.

Florida was the most popular destination for auto travelers from New England, Mid-Atlantic, Great Lakes, Midwest and Southeast regions, while California was on top of the list for the Southwest and West.

According to the report, one of the fleet managers noting suspension problems commented, "CV joint boots (are) vulnerable to road hazards," and there is "poor diagnosis on causes of vibration and tire wear."

Another 18 percent of the fleet managers said general problems were excessive maintenance and repair, and 10 percent cited difficulties with brakes.

Despite negative comments about maintenance of front-wheel-drive cars, the Runzheimer survey included this comment by one fleet manager who represents the 70 percent with no abnormal front-wheel-drive maintenance:

"We encounter from time to time other than normal maintenance requirements with all vehicles, but the front-wheel-drive and four-cylinder vehicles are no more a problem than the traditional rear-wheel intermediate vehicle."

• Runzheimer said the fleet managers, in citing their problems, listed the GM X-body cars most frequently, 34 percent citing the 1981 model, 24 percent the 1980 model, 22 percent mentioning the 1982 model and 6 percent the 1983 model. (See accompanying table.)

According to the Runzheimer study, the most often mentioned X-car was the Chevrolet Citation, followed by the Buick Skylark, the Pontiac Phoenix and the Oldsmobile Omega.

The Chrysler K-car (Plymouth Reliant and Dodge Aries) also was noted by the fleet managers as being troublesome, 7 percent citing the 1982 model, 5 percent listing the 1981 model, 3 percent mentioning the 1983 model.

Four percent of the managers cited the 1982 Ford Escort as being troublesome, while another 2 percent mentioned the 1981 Escort.

Various model years of the GM A and J-body cars were also mentioned by the respondents as requiring abnormal maintenance, according to Runzheimer.

"We have had very expensive transmission repairs on all GM front-wheel-drive models in various years. GM seems to have done nothing to improve quality. They just advertise that they have made improvements," Runzheimer quoted one fleet manager, who is responsible for 500 cars, 80 percent of which are front-wheel-drive, as saying.

Power steering, computer, drivetrain and suspension problems were listed by the fleet managers as being associated with GM X-bodies.

Runzheimer editors noted, however, that because GM comprises 61.6 percent of all cars in all fleets, the manufacturer will proportionately be shown to have more problems.

Ford's share of the fleet market, according to Runzheimer, is 22.5 percent, while Chrysler accounts for 13.5 percent, and others have 2.4 percent.

Abnormal Maintenance With FWD Models

Year/model or Body Style	Percent

shop talk

Continued from Page 20

its success is closer to the jobber."

Hellweg said one of the best ways to overcome competitors "is standing behind the counter of a jobber store—the professional counterman, male or female. They can be the difference."

"The counterman, however, is often the most overlooked part of the parts business," Hellweg said. "A good counterman must be a salesman, a problem solver, computer operator, receiving clerk, consultant and, often times, a delivery person, outside salesman, assistant manager and janitor. And, as cars get more complex, the counterman's job will too."

• Hellweg said "a professional counterman (man or woman) has one of the most demanding sales jobs in our parts industry."

"A professional counterman can be the important difference to the jobber owner, the professional counterman can be the important difference in every step in the distribution system and yet the counter person generally receives less credit for business success than anyone else in the system," Hellweg said.

"Why is that? Part of the reason has to be the lack of a way to recognize the counterman.

"He or she has to be the expert to the DIY customer aiding with parts selection and suggesting installation techniques," he said. "At the same time, the professional counterman has to be able to suggest tools or installation techniques that save the mechanic time and to be sure the mechanic has all the parts he needs to do the job right.

"With all this responsibility, the counterman is rarely considered to be a professional," Hellweg said. "It's recognized that the professional counterman can be the important difference. In my opinion, the time has come to raise the overall image of the counterman."

Bright future seen for replacement windshield market

Continued from Page 20

of cars and trucks for future replacement business."

He said that trucks now account for a larger portion of total vehicle sales — 28 percent in 1983 compared with about 23 percent five years ago.

"The growth in truck sales means more replacement business for glass installers because breakage rates for trucks are much higher than cars — 5.2 percent vs. 3.2 percent," he said.

"The severe winter of 1983-84 and generally poor road conditions also should result in added windshield replacement business," he said.

Ford Motor supplies replacement windshields for virtually all General Motors, Chrysler Corp., American Motors and Ford vehicles, as well as most foreign makes cold in the U. S. and Canada.

Ursomarso receives GM Parts award

Anthony Ursonarso, third from left, Union Park Pontiac, Inc., Wilmington, Del., receives an achievement plaque for completing the GM Parts Management Action Program from Arthur J. Carrado, second from left, GM Parts Philadelphia zone manager. From left are Jim Bullock, GM Parts district manager; Corrado; Ursomarso; Frank Ursomarso, and Peter Trapuzzano, dealership parts manager. Nationally, over 700 GM dealers have completed the program which analyzes the sales, profits and expenses of the dealership's parts and service business.

'83 market for new cars best since '79

Continued from Page 6

climbing to 2.95 percent from 1.98 percent, and miscellaneous domestics dropped from 0.05 percent to 0.01 percent.

The market-class breakdown for all classes for the 1983 calendar year was as follows: Imports at 27.54 percent (2,457,357); intermediates at 26.43 percent (2,358,384); compacts at 16.52 percent (1,474,566); standards at 12.78 percent (1,140,783); subcompacts at 11.27 percent (1,005,937), and luxuries at 5.46 percent (487,159).

December's registrations total of 909,660 was up 29.68 percent from 701,448 the preceding year. The ballooning was due both to a steady sales growth industry-wide and also to the capture of figures for the State of New York which were delayed for both November and December. New York figures were compiled from manufacturers' sales records instead of state registrations, according to R. L. Polk & Co.

The December total was 18.84 percent above the 1982 total of 765,461 and proved highest for the 12th month since 1978 when 948,536 new passenger cars were tallied.

December domestic registrations were up 27.69 percent, to 671,079 from 525,546. They represented a 21.00-percent gain over the 554,628 recorded two years earlier.

Import registrations rose 13.16 percent to 238,581 from 210,833 in 1982.

• For the month, AMC, Ford and GM increased their pieces of the total market. AMC was up 0.23 percentage points, Ford gained 0.85 percentage points and GM was up 0.39 percentage points.

Imports in December were down 1.31 percentage points, to 26.23 percent from 27.54 percent. Chrysler dropped 0.14 percentage points and miscellaneous domestics were wiped out, down 0.02 percentage points, from 0.02 percent to zero.

Excluding the imports, GM earned 60.90 percent of the December market, down from 61.47 percent in 1982. Ford cornered 23.95 percent, up from 23.21 percent. Chrysler dropped to 12.01 percent from 12.42 percent. AMC claimed 3.14 percent, up from 2.87 percent, and miscellaneous domestics were down to nothing from 0.03 percent.

Intermediates edged out imports with the largest segment of the market class total in December. Intermediates had 26.60 percent (241,965), followed by imports at 26.23 percent (238,581); compacts had 17.11 percent (155,646); subcompacts had 12.15 percent (110,491); standards had 12.00 percent (109,213), and luxury models had 5.91 percent (53,764).

A year earlier, intermediates had 25.54 percent, imports claimed 27.54 percent, compacts had 17.10 percent, subcompacts had 11.63 percent, standards had 12.01 percent and luxuries had 6.18 percent.

Of the domestics alone in December, 36.06 percent were intermediates, 23.19 percent were compacts, 16.47 percent were subcompacts, 16.27 percent were standards and 8.01 percent were luxury cars.

Autos are incentives at Mary Kay Cosmetics

Sales staff rewarded with GM cars

ATLANTA.—Money may be a motivator of people, but these days the high prices of automobiles may be a better one.

Mary Kay Cosmetics, Inc., the Dallas direct selling company that encourages women to sell beauty aids door-to-door and through sales parties, is among the list of companies using cars as a sales incentive.

Last year, Mary Kay awarded 750 pink Cadillacs and a similar number of Buicks to its top producers.

This year, the program is being expanded, the company announced at a sales meeting here. The firm is now offering cream-colored Oldsmobile Firenzas to leading sales producers, in addition to Cadillacs and Buicks.

The company is another one turning to cars as incentives for better sales. Chik-fil-A, an Atlanta-based fast food restaurant, recently awarded 40 Continental Mark VIIs to store managers who achieved certain sales increases.

Faced with declining sales volume, Mary Kay is tightening its efforts with the new incentive campaign. The Firenza will now be used as a lure for the women who sell the beauty products to achi[illegible]tter sales.

To qualify for [illegible]renza, saleswomen must for three consecutive months order at least $600 worth of products while supervising a staff of five other beauty consultants who place combined wholesale orders of at least $3,000 a month.

The team leaders will be able to keep the cars for as long as they continue to meet quotas.

Referring to the policy of giving sales representatives the use of a Mary Kay car, Dick Bartlett, vice president of marketing, said it is a most liberal plan for hard-working representatives.

"That's not a whole heck of a lot of sales dollars or wholesale volume to qualify for a large bonus like a car," he said.

Sales recovery, import restrictions result in tight supply

Shortages in some car lines hound dealerships

Continued from Page 54

The export total has been raised from 1.68 million units to 1.85 million.

A spokesman for Toyota, the largest-volume Japanese importer, said the company is "short on everything," with supplies running less than 15 days on all models.

However, he said, customers who are "flexible" in demands can find cars on dealer lots or expect shipment of the car of their choice "relatively soon."

"Everything has been in short supply," said Ron Napoli, a Toyota dealer in Mt. Kisco, N. Y. "Everything we are writing now is pretty much predicated on a May delivery and people are happy to wait. That seems to be indicative of the situation for most of the import dealers in our town."

Nissan reports an average 22-day inventory for its models, with the Maxima running at just 17 days' supply.

Paul Brown, sales manager at a Nissan dealership in Minneapolis, said all models are hard to come by. He said the wait for customers is 30-60 days.

"We've got limited availability across the board," said Brown.

A Honda dealer in Memphis said he has been unable to maintain Prelude and Civic CRX models in stock.

"I would love to have either one of them for a demo to drive around," he said. "All the Civics are really short now, but especially the CRX. The press the CRX has received has been fantastic. But when people come in to see one and find out they have to wait two or three months, they look at other Civics."

He said the wait on a new Prelude has been about six weeks, while customers ordering a CRX must be patient for two to three months.

Elsewhere among the Japanese imports, a Mazda spokesman said all models are "going out the door as soon as they come in." He said customers are waiting about a month for all cars in the company's line.

A Subaru spokesman said the company is operating with a 12-day supply of automobiles in the U. S. He said the wait for new cars ranges from one to two months.

"We don't encourage dealers to pre-sell and take a lot of money," said the Subaru representative. "When the dealer knows the car has been shipped, he can go ahead and sell the car and know that the customer will not have to wait too long."

"Among European imports, spokesmen for Mercedes - Benz, Saab, Porsche and Audi report substantial waiting periods for customers.

Mercedes acknowledges that the wait for some models can be 10 to 12 months, depending on the dealership. The company does not announce inventory levels, but industry sources have pegged a six-day supply for the 500-SEL and a nine-day stock of 190-E models.

Delivery time at some Mercedes outlets may be significantly shorter than others, according to a company spokesman. He said individual allocations and trading among franchisees makes for a different supply story at each dealership.

"We really can't function in the U. S. market (with the current delay in filling orders)," said the spokesman. "This is the land of instant gratification. The ideal is to have a two-month supply of everything, but we haven't had that for some time."

A Porsche-Audi representative called supplies "not too terrific."

The average for all Porsche models was placed at 17 days, while the 944 was running at only 14 days' supply. The Audi line averages 33 days, but the 5000 has only a 21-day inventory, according to a spokesman.

"There is a wait for virtually anything in the Porsche or Audi line," he said.

Customers who want to buy a Porsche 944 today would have to wait for a 1985 model, according to Fred Lavery, a Porsche-Audi dealer in Birmingham, Mich.

"I could probably get one before the end of the year, but it might be December," said Lavery. "Absent an order cancellation, we are sold out, as best we know, for the remainder of the 1984 model run in 944s. I have probably one unsold 911 that I have been allowed to order."

Lavery's supply of Audis is less tight, but he said the 5000 Turbos are being sold three months in advance of delivery.

A spokesman for Saab said delays on customer orders are ranging from three to four weeks on all models.

"I can remember when you could buy 10 at a time," he said. "But we've been short for two years. Selling them is just a matter of how fast they can make them in Sweden and ship them over."

"Saab sales are limited by lack of availability," said Bob Bruzas, sales manager for Westlake Imports, Elmhurst, Ill. "They can't get production up as fast as demand."

Bruzas put the wait for new-car orders at between 30 and 45 days, if a car is not in current stock or available through a dealer trade.

"The difficulty is that you are not placing an order with the factory," he said. "You are waiting for the next shipment to come in, and if it's not there you wait until the next one. You have to quote a range on delivery dates because it is difficult to predict."

Maremont shifts two executives in reorganization

CHICAGO.—Maremont Corp. has announced a reorganization of its management.

James W. Thomas, group vice president in charge of the company's subsidiary operations, has been named vice preesident, sales and marketing, Domestic Automotive Division. This position was previously held by Peter J. Huber, who recently resigned to join CR Industries as vice president of its Replacement Division.

Thomas, who joined the company in 1969, will also have responsibility for corporate research and engineering functions. Thomas will report to Byron O. Pond, Maremont chairman, president and chief executive officer.

In a related move, Kenneth C. Cornelius, chief financial officer, will assume direct responsibility for the company's wholly owned subsidiaries, including Marwil Products Co., C&C Mfg. and Apex Automotive. He will continue as chief financial officer.

In addition, W. Thomas Clements, vice president and general manager of Maremont's Saco Defense Systems Division, will now report to Pond.

Truck market posts '83 gain of 22 percent

Continued from Page 16

age loser in 1983. Its 12-month total of 923 registrations was 33.3 percent below the previous year's 1,384 units.

There were 46,199 Group 6 registrations last year, an increase of 5.5 percent over the year-earlier 43,797 units. Trucks in this weight class are fast closing the gap between it and Group 7. Only about 3,000 units separated the two in 1983, compared with 9,000 the year earlier.

The Group 7 count last year was off 9.6 percent to 49,426 units, compared with 54,657 in 1982. There were 80,012 Group 8 tallies during the year, an increase of 9.2 percent over the previous year's 73,285.

Ford's 942,568 registrations during the year accounted for 31.67 percent of the industry total, an increase of 1.51 percentage points over the year-earlier 30.16 percent on 733,120 tallies.

Second-place Chevrolet took 30.39 percent of the total in 1983 with 904,672 tallies. Its share was down 0.80 points from the previous year's 31.19 percent on 758,107 units.

HD registrations in '83 hit 129,438, highest in 4 years

Continued from Page 16

dustry total, a gain of 1.34 percentage points over the previous year's 22.47 percent, when International finished second with 28,754 units.

Ford's market share in 1983 was down 3.31 points from the year earlier. Its 26,255 tallies accounted for 20.28 percent of the year's total, compared with 23.59 percent on 30,180 units in 1982.

Freightliner was the biggest gainer in penetration in 1983. Its 11,111 tallies took 8.58 percent of the total, an increase of 2.88 points over the pervious year's 5.70 percent on 7,292 registrations.

Peterbilt, Kenworth, White, Volvo and Autocar also increased their market share last year. Ford was the biggest loser in penetration, followed by GMC, Mack, Western Star, Chevrolet, Mercedes-Benz and the miscellaneous group.

An Accurate Lease in 20 seconds

Developing a successful leasing operation is easy . . . just make accurate decisions. Unfortunately, these usually require time-consuming calculations. Now, reduce that time to less than it takes to sharpen a pencil with the Decisive Software® Leasing Program. Using the computer speed and accuracy of your **Apple®, IBM PC®** or **Radio Shack®*** computer, it provides a comprehensive analysis of each leasing arrangement with "bottom line" figures on total costs, profit and cash flow.

Whether you are an experienced leasing operation or are just entering this lucrative field, this program will attend to the calculations while you attend to your success . . . at a cost less than one wrong decision.

* Radio Shack due out fourth quarter of 1984

★—No registrations for Oklahoma, 1983 and 1982; November-December New York totals compiled from manufacturers' sales records.

#—Memo units are trucks which are part of the total listed above each entry. Chevrolet memo units are vans, El Camino, LUV and S-10 compacts; Ford, vans, Bronco, Courier, Ranger and Bronco II; GMC, vans, Jimmy, Caballero and S-15 compacts; Dodge, Ram 50, Ramcharger, Ram Van and Rampage; Jeep, CJs, Cherokee, Wagoneer and Scrambler. Plymouth trucks are Voyager, Arrow, Trail Duster and Scamp.

—Compiled from R. L. Polk & Co. data

Let Detroit 'fend for itself,' he says

Senator asks for end to Japanese quotas

WASHINGTON. — Quotas on Japanese cars exported to the U. S. should be ended, Senator John Chafee, Rhode Island Republican, told his Congressional colleagues, and "Detroit should be left to fend for itself."

"It is time for the quota to be exposed for what it is: A hoax on workers and the American consumers," he added in his speech on the Senate floor.

The Japanese Government has extended quotas on cars exported to the U. S. until March 31, 1985.

Enough, Chafee said, of this "breathing space," which Detroit said would put workers back on the job and enable it to make cars better and cheaper.

Instead, he said, all three companies have posted record profits by selling fewer cars "at a hefty premium for the simple reason they are spared competition." But the companies are talking of fewer workers in the future.

But, said Chafee, it is the consumer "who has really taken a beating." The average price of U. S. cars this year, he said, will be more than "$10,500 — an increase of $2,000 in just two years. The Japanese, moreover, are pushing their most expensive models and adding extra options."

"Go into any Japanese automobile dealership and you will find the sticker price usually includes a premium cost of $1,000 or more labeled 'added dealer markup' or, more euphemistically, 'market adjustment fee,'" he said.

Now, Japanese cars often cost more than American cars, Chafee said, and Detroit, instead of using its "breathing space" to undersell the Japanese and regain market share, has raised prices "although it tends to keep them just under the prices for restricted imports."

Concluded Chafee, "If ever there were a need for free enterprise, that need exists in the auto industry."

California law permits delay on installments

SACRAMENTO. — New legislation in California prohibits new-car dealers, banks and other creditors from enforcing installment sales contracts against buyers with credit disability insurance who may miss payments after April 1, 1984, because of disabilities.

Henceforth, such a buyer must be provided a three-month grace period to give time to file a claim and have action taken on the claim. During the three-month period, all collection efforts and repossessions are forbidden.

If the claim is approved, the buyer is relieved of his obligation while the insurance company makes the payments. If the claim is denied or only partially approved, the buyer has 35 days from the date of the denial to make up payments due, including accrued interest and late charges.

The Northern California Motor Car Dealers Assn. has told all dealer members that "if an insured buyer notifies you that a disability is forcing him or her to miss payments, you must immediately notify him or her in writing of the name, address and telephone number of the insurance company so that he or she can make a claim for coverage."

Anglo American buys auto auction in Florida

WEST PALM BEACH, Fla. — Anglo American Auto Auctions, Inc., Nashville, has purchased West Palm Beach Auto Auction, Inc. It is the ninth major U.S. acquisition by AAAA, a unit of British Car Auction Group, P.L.C., since it began operation in May, 1982.

William B. and Ruth Kemp, former owners, will remain with the auction, which will be expanded to include an automotive reconditioning center. The purchase includes a two-lane auction branch in Fort Lauderdale, which AAAA plans to expand at a larger site in the same city.

Anglo American buys Nashville auction firm

CHICAGO.—Anglo American Auto Auctions, Inc. (AAAA), Nashville, has purchased Arena Auto Auction, Inc., and its associated Midwest Recon Center, based here, for an undisclosed amount.

AAAA is a unit of British Car Auction Group, P.L.C.

New auctioneer

Brad Phillips is a recent graduate of Mendenhall School of Auctioneering, High Point, N. C. Brad will be working with his father, Bill Phillips, owner of the Mid-America Auto Auction, Wichita.

Trucks show 86 pct. gain

February car sales up 61 pct. in Canada

Staff Writer

New-car sales in Canada continued to reflect sales trends of its neighbor to the south but with even more intensity in February when a 61.09-percent increase was reported. The January increase was 53.91 percent for cars, bringing the year-to-date gain over 1983 levels to 57.71 percent.

By comparison, U. S. domestic sales were up 48.03 percent in February and 40.88 percent in January.

Truck sales in Canada moved at breakneck speed, up 86.40 percent in February, following a 67.20-percent rise in January.

Sales of North American-built passenger cars numbered 51,792 the second month of this calendar year, up almost 20,000 units over 32,151 the preceding year. Year-to-date sales reached 95,911, a gain of 57.71 percent over 60,816 in 1982.

In February, General Motors sales exploded 76.61 percent, to 27,811 from 15,747 in 1983. Ford squeezed past Chrysler to take second place with sales of 10,399, compared with 10,366 at Chrysler. Ford sales were up 59.46 percent, Chrysler figures were up 43.03 percent.

American Motors reported sales of 2,595 passenger cars, up 15.28 percent from 2,251. Totals include 779 imported Renaults this year versus 792 a year earlier. Volvo's February sales of 621 were up 44.42 percent from 430 in 1983.

GM's share of the market climbed to 53.70 percent from 48.98 percent. Ford slipped to 20.08 percent from 20.28 percent. Chrysler was down to 20.01 percent from 22.40 percent. American Motors had 5.01 percent compared with 7.00 percent a year ago, and Volvo dropped to 1.20 percent from 1.34 percent.

February truck sales, including captive imports, totaled 18,895, up 86.40 percent from 10,137 in 1983. Sales for the first two months of this year improved by 76.96 percent, to 35,277 from 19,935.

GM sales totaled 8,055, up 67.12 percent from 4,820. Ford was up 74.71 percent, to 6,368 from 3,645. Chrysler's total more than doubled, to 3,901 from 1,542, and AMC Jeep sales mushroomed 539.23 percent, to 571 from 130.

GM's share of the truck market in February was 42.63 percent, down from 47.55 percent. Ford slipped to 33.70 percent from 35.96 percent. Chrysler was up to 20.65 percent from 15.21 percent, and AMC gained close to two percentage points, rising to 3.02 percent from 1.28 percent.

Adjust to fit

Seat of the Volvo LCP travels only slightly. Instead, the plastic pedal group and the steering wheel-instrument cluster adjust to fit the driver.

*—Note: Tempo/Topaz, despite being '84 models, are included for the period they were built during the '83 run. The same is true for Corvette. Some models built principally or solely in Canada are included to give an accurate picture of industry rates.

Suit establishes many 'firsts'

Government and GM square off on X-cars

Continued from Page 8

changes and eventually three of them were made in running changes or in partial recalls.

• Now, said Maloney, the government wants these changes for all owners of '80 X-body cars "immediately" because they pose a "grave danger." The government also claimed GM knew of the problems that developed over time—for example, the 40-percent reduction of output from the front brakes after 5,000 miles.

Besides, said Maloney, when the government asked GM for data in May, 1980, Buick engineers recommended a change in the proportioning valve and also brake lining and brake drums, but GM addressed only the proportioning valve and continued to do so for its partial initial recall.

Maloney cited other instances of GM's failure to respond fully although its division engineers had data. Thus, said Maloney, GM's "credibility" is at issue.

Moreover, he added, GM knew of the potential for loss of control, hence its two early and partial recalls. GM also knew, said the government, of developing problems over use and the sporadic nature of the problem both from its consumer complaints and its own engineers.

The government, which alleged 13 fatalities and 75 injuries among its thousands of consumer complaints, plans to start with testimony of 13 consumers. Its chief witness will be Robert Hellmuth, head of defect evaluation and the man who has read all the GM documents.

It will also use Dr. Keith Brewer, an expert in vehicle dynamics, who has been working on possible harmonization of American and European brake standards and who will say the '80 X-bodies "stuck out like a sore thumb" because of bias toward rear brakes — more dangerous than front-wheel lockup.

It will also call George Parker, NHTSA associate administrator for enforcement, to speak on brake design especially for lightly loaded vehicles, and Dr. James Hedlund, a NHTSA statistician, to rebut GM's testimony on real world data from Failure Analysis.

The government will also use two persons from the University of Michigan's Highway Safety Research Institute (HSRI) and one Canadian expert on anti-skid.

GM will have its accident data specialists and Robert J. Eaton, vice president in charge of advanced engineering. The evidence will show the "kids still let grandma drive her car and she's still doing it . . ."

GM is questioning the propriety of a government video tape on grounds that the car was mechanically set to brake itself and the driver was told not to steer.

But while GM noted that Standard 105 allows wheel lockup, GM does not mention that it also uses the standard operating test procedure—ability to stop in a straight line with no steering.

Government engineers explain that the no-steering and mechanical brake provisions are intended to make the test as objective as possible by removing all driver variability.

Finally, GM addressed a peripheral issue which may or may not come up at the trial—GM's failure to use the government HOTLINE number in its recall letter.

GM said the regulation is invalid because there was no public comment period, but in any case, the government had adopted a "nonenforcement policy" toward other companies which had sent out 79 letters not mentioning the HOTLINE number.

Import stocks move higher to 29-day supply

Continued from Page 1

94, and Dodge Conquest/Challenger, 114.

West German-made cars in inventory March 1 totaled 62,374, a 56-day supply, compared with 53,288 a month earlier, a 50-day stock.

German nameplates and their March 1 days-supply figures were: Porsche, 25; Audi, 26; Mercedes-Benz, 28; BMW, 68, and Volkswagen, 91. In addition, VW had an 88-day supply of U. S.-built Rabbits.

Days-supply figures for other European lines included: Jaguar, 14; Alfa Romeo, 24; Volvo, 51; Saab, 51; Peugeot, 51, and Renault, 219.

Days-supply figures for imported pickup trucks March 1 were: Mazda, 18; Mitsubishi, 25; Toyota, 28; Nissan, 40; Chrysler/Mitsubishi, 60, and Isuzu, 92.

IMPORT INVENTORIES

	Mar. 1, 1984	Feb. 1, 1984	Mar. 1, 1983
Honda	19	18	22
Isuzu	32	60	109
